

# Overdose Fatality Review

---

## Data System Guidance

Version 1.0

This project is supported by the Bureau of Justice Assistance (BJA), Office of Justice Programs, U.S. Department of Justice, and the U.S. Centers for Disease Control and Prevention by Grant No. 2017-AR-BX-K003 awarded by BJA. The contents of this document were developed by the Institute for Intergovernmental Research and do not represent the official position or policies of the U.S. Department of Justice or the U.S. Centers for Disease Control and Prevention.

## Acknowledgements

The Overdose Fatality Review (OFR) Data System Guidance released in October 2020 was authored by Mallory O'Brien, with the Bureau of Justice Assistance, Office of Justice Programs, U.S. Department of Justice, and Melissa Heinen, with the Institute for Intergovernmental Research. This guide is a companion to the Overdose Fatality Review Data System User Guide, Version 1.0.

The OFR Data System REDCap instrument was developed by the Institute for Health & Equity, Division of Epidemiology, Medical College of Wisconsin.

The OFR Data System structure, variables, and responses were developed by the OFR Data Work Group topic leads and members.

Sarah Rockhill, Michigan Department of Community Health  
Erin Russell, Institute of Intergovernmental Research  
Lauren Savitskas, Indiana Department of Health  
Jason Schaak, West Allis Fire Department  
Emilia Sigrid Pasalic, U.S. Centers for Disease Control and Prevention

### **OFR Data Work Group Members**

Lacie Ampadu, Arizona Department of Health Services  
Meghan Balough, Utah Department of Health  
Nava Bastola, New Jersey High Intensity Drug Trafficking Area  
Megan Broekemeier, Utah Department of Health  
Mary DeLaquil, Minnesota Department of Health  
Angie Deokar, U.S. Centers for Disease Control and Prevention  
Rebecca Egbert, Michigan State Police  
Constance Kostelac, Medical College of Wisconsin  
Veronica Little, Utah Department of Health  
Jamie Margetta, Minnesota Department of Health  
Amy Moore, Michigan Department of Health and Human Services  
Aubrianna Perez, Arizona Department of Health Services  
Kimberly Reilly, Ocean County Health Department  
Aurielle Smith, Wisconsin Department of Health Services  
Anne Thomas, Hamilton County Public Health Department  
Maureen Ward, Montana Department of Public Health and Human Service

## Table of Contents

- Data Reporter Guidance ..... 1
- Data Entry Tips ..... 2
- Overdose Fatality Review Case Information..... 3
- 1. OFR Administration..... 3
  - 1.1) Case-unique identifier (REDCap-generated) ..... 3
  - 1.2) Name of person completing this form ..... 3
  - 1.3) Email for the person completing this form ..... 3
  - 1.4) Date completing this form..... 4
  - 1.5) Date the case was reviewed in the OFR..... 4
  - 1.6) What was the case selection criterion? ..... 4
  - 1.7) What data sources were shared at the review meeting? ..... 5
  - 1.8) What OFR members were present/represented at the review meeting?..... 5
- 2. Decedent Demographic Information..... 6
  - 2.1) Decedent’s first name ..... 6
  - 2.2) Decedent’s last name ..... 6
  - 2.3) Decedent’s date of birth (DOB)..... 7
  - 2.4) Age in years ..... 7
  - 2.5) Birth state ..... 7
  - 2.6) Birth country..... 8
  - 2.7) State of residence..... 8
  - 2.8) Known homeless at the time of death ..... 9
  - 2.9) Sex of decedent..... 10
  - 2.10) Gender identity ..... 11
  - 2.11) Relationship status at the time of incident ..... 12
  - 2.12) Sex of partner ..... 13
  - 2.13) Marital status ..... 13
  - 2.14) Sexual orientation ..... 14
  - 2.15) Race ..... 14
  - 2.16) Verified tribal status ..... 15
  - 2.17) Hispanic/Latino/Spanish ethnicity..... 16

2.18)	English speaker.....	16
2.19)	Known service in the U.S. armed forces.....	17
2.20)	Usual occupation.....	17
2.21)	Occupation status at time of death.....	18
2.22)	Highest education obtained.....	18
2.23)	Known disability at time of overdose incident.....	19
2.24)	Did the decedent have any children, under the age of 18, at the time of the overdose incident?.....	19
3.	Cause of Death.....	20
3.1)	Enter ICD-10 code for cause of death.....	20
3.2)	Immediate cause of death (Part 1a).....	20
3.3)	Condition listed in b.....	21
3.4)	Condition listed in c.....	21
3.5)	Condition listed in d.....	22
3.6)	Enter other significant conditions contributing to death but not resulting in underlying cause listed in Part 1 (Part 2 of death certificate).....	22
3.7)	Describe how the injury [overdose] occurred (Part 2 of death certificate).....	23
3.8)	Manner of death (Part 2 of death certificate).....	24
4.	Scene of Overdose and Death.....	24
4.1)	Location of overdose incident.....	24
4.2)	State of overdose incident.....	25
4.3)	County of overdose.....	26
4.4)	City of overdose.....	26
4.5)	ZIP code of overdose incident.....	26
4.6)	Street address of overdose incident.....	26
4.7)	Did the location of the overdose death differ from that of the overdose incident?.....	27
4.8)	Date last known to be alive before overdose.....	30
4.9)	Date of overdose incident.....	30
4.10)	Date of death.....	31
5.	Drugs at the Scene of Death.....	32
5.1)	How was/were the drug(s) administered?.....	32
5.2)	What types of substance(s) were known to be found on the scene?.....	34

6.	Death Investigation and Toxicology Information .....	38
6.1)	Was an autopsy performed? .....	38
6.2)	What specimens were collected for toxicology testing? .....	39
6.3)	Was toxicology testing performed? .....	40
6.4)	What kind of toxicology testing was done? .....	40
7.	Interventions Following Overdose.....	42
7.1)	Were there known witnesses of the drug use that resulted in the fatal overdose? .....	42
7.2)	Number of known bystanders present at the scene of the overdose .....	43
7.3)	Was the emergency medical dispatching (EMD) protocol performed?.....	48
7.4)	Was EMS at the scene? .....	49
7.5)	Was it known that naloxone was administered? .....	51
8.	Recent Life Stressors.....	56
8.1)	In the 14 days prior to death, did the decedent have any of these known housing or financial stressors?.....	56
8.2)	In the 14 days prior to death, did the decedent have any of these known life stressors? .....	56
9.	Health Care Access.....	56
9.1)	In the 12 months prior to death, did the decedent have known health care visits (other than behavioral health/mental health or substance use disorder treatment)? .....	56
9.2)	In the 12 months prior to death, how many times did the decedent have a known emergency visit?.....	57
9.3)	In the 12 months prior to death, how many times did the decedent have known encounters with EMS, including community paramedics? .....	58
9.4)	In the past 12 months prior to death, how many times did the decedent have a known inpatient hospitalization?.....	59
9.5)	Date of <i>most recent</i> known visit with a primary care provider.....	61
9.6)	In the 12 months prior to the death, what harm-reduction services was the decedent known to access? .....	62
9.7)	At the time of death, what was the decedent's insurance status?.....	62
9.8)	In the 12 months prior to death, was there a known change in insurance coverage?.....	62
10.	Health History .....	63
10.1)	Did the decedent have any known history of any of the following health conditions? .....	63

10.2)	At the time of death, was the decedent known to be under medical care or receiving treatment for the following health issues?.....	63
10.3)	What type of pain was the decedent being treated for?.....	64
10.4)	In the 14 days prior to death, did the decedent have any of these known health stressors?.....	65
11.	Mental Health History.....	66
11.1)	Did the decedent have a known history of a mental health problem/diagnosis (such as depression, anxiety, post-traumatic stress disorder [PTSD], etc., excluding substance use disorder treatment)?.....	66
11.2)	In the 12 months prior to death, did the decedent have known visits with a provider to treat a mental health condition? .....	66
11.3)	Did the decedent have a known history of suicidal ideation/plans or attempts? .....	68
11.4)	At the time of the overdose incident, was it known that the decedent left a suicide note, a letter, a text, an email, and/or a voicemail? .....	69
11.5)	In the 14 days prior to death, did the decedent have any of these known mental health-related events?.....	70
11.6)	In the 12 months prior to death, was mental health treatment recommended by a health professional and/or identified as a need by the family, but the decedent did not receive care? .....	70
12.	Substance Use History .....	71
12.1)	Did the decedent have a known history of substance use disorder or diagnosis?.....	71
12.2)	What was the decedent’s known preferred method for the substance involved in the death? .....	73
12.3)	Over the decedent's life, number of known nonfatal drug overdoses .....	74
12.4)	In the 12 months prior to death, did the decedent have a known period of sobriety or abstinence from the drug involved in the fatal overdose? .....	75
12.5)	In the 12 months prior to death, did the decedent have known treatment for substance use disorder? .....	76
12.6)	At the time of the overdose incident, was the decedent known to be connected with a recovery coach or peer support specialist? .....	79
12.7)	In the 14 days prior to death, did the decedent have any of the following known substance use-related events?.....	79

12.8)	In the 12 months prior to death, was substance use disorder treatment recommended by a health professional and/or identified as a need by the family, but the decedent did not receive care? .....	80
13.	Trauma History .....	81
13.1)	As an adult, did the decedent have a known history of the following trauma or violence? ..	81
13.2)	In the 14 days prior to death, did the decedent have a known history of the following trauma or violence? .....	81
13.3)	Did the decedent have a known history of any of the following adverse childhood experiences?.....	82
14.	Criminal Justice History.....	82
14.1)	Did the decedent have any known criminal justice history? .....	82
14.2)	Over the decedent’s life, number of known arrests .....	83
14.3)	Over the decedent's life, number of known episodes of community supervision .....	85
14.4)	Over the decedent's life, number of known incarcerations.....	87
14.5)	Date of entry for <i>most recent</i> known post-adjudication program and/or specialty courts....	89
14.6)	Date of <i>most recent</i> known pre-arrest/pre-charge diversion .....	92
14.7)	In the 14 days prior to death, did the decedent have any of the following known interactions with the criminal justice system?.....	92
15.	Social Service History.....	94
15.1)	Did the decedent have a known history of receiving any of these social services? .....	94
15.2)	At the time of death, was it known that the decedent was receiving any of these social services? .....	94
15.3)	Did the decedent have a known history of having his/her children removed from their home by child protective services? .....	95
15.4)	At the time of death, was there a known open child protective services case involving the decedent as a potential perpetrator? .....	96
15.5)	At the time of death, was there a known open child protective services case involving the decedent as a victim?.....	96
15.6)	As a child, was the decedent ever known to be removed from his or her home? .....	97
15.7)	In the 14 days prior to death, did the decedent have any known child protective services-related stressors? .....	97
16.	Education History.....	97

16.1)	Did the decedent have any known history of problems at school? .....	97
16.2)	In the 14 days prior to death, did the decedent have any known education-related stressors? .....	98
17.	Recommendations .....	98
17.1)	Did the review of the case identify any recommendations? .....	98
17.2)	Provide a brief description of the initial recommendation identified .....	98
17.3)	What types of recommendation strategies were identified? .....	99
17.4)	Jurisdictional levels responsible for implementing the recommendation.....	99
17.5)	Did this case generate another recommendation?.....	100
18.	Case-Specific Community Context.....	100
18.1)	State in which the decedent lived .....	100
18.2)	Does the community have access to and monitor multiple data sources to guide prevention and intervention planning strategies?.....	102
18.3)	Does the community have a targeted naloxone distribution program?.....	102
18.4)	Does the community have a coordinated rapid response team/plan to respond to spikes in overdoses, overdose-related events, or emerging drug trends?.....	103
18.5)	Is the community considered a high-density-use and/or high-density-overdose area? .....	103
18.6)	To what extent is MAT (medication-assisted treatment) available in the community?.....	103
18.7)	To what extent is MAT (medication-assisted treatment) available to individuals upon release from jails or pre-trial detention?.....	104
18.8)	To what extent is buprenorphine-based MAT (medication-assisted treatment) initiated in local emergency departments? .....	105
18.9)	To what extent are syringe service programs available in the community? .....	106
18.10)	To what extent is wraparound follow-up care available after a nonfatal overdose? .....	107
18.11)	To what extent is naloxone available among substance use disorder treatment providers?.....	107
18.12)	To what extent is naloxone available in criminal justice facilities (for example, courts, jails, and probation)?.....	108
18.13)	To what extent is naloxone available and used by law enforcement and other first responders? .....	109
18.14)	In the three months prior to the death, were there any significant overdose prevention-related policy changes in the community? .....	109

18.15) In the three months prior to the death, were there any significant overdose prevention-related funds awarded to the community? .....	109
18.16) In the three months prior to the death, were there any significant overdose prevention-related funds lost to the community? .....	110
18.17) In the three months prior to the death, were there any changes in elected officials in the community? .....	110
18.18) In the 14 days prior to the death, were there any high-profile overdoses in the community? .....	110
18.19) Was the death possibly connected or related to a contaminated/tainted batch or a community spike in overdoses? .....	111

# Data Reporter Guidance

## Data Entry Tips

- **Interpreting known:** An OFR team gathers information from partners across multiple agencies to understand the circumstances leading to an overdose fatality. The ability of the team to know whether an event or circumstance occurred is limited to the information and records available to the team. As a result, many data points in this instrument ask the data reporter to indicate whether there were any known instances of an event or circumstance. For these data points, the data reporter is not provided with an “unknown” option. If the team is unaware of any instances of the event or circumstance, then the data reporter is advised to select “no.” For example, question 2.8 asks *Known homeless at the time of death*. The data reporter would select “no” in two instances; 1) the team has knowledge that the decedent was not homeless at the time of death or 2) the team does not know whether the decedent was homeless at the time of death.
- **Handling unknown numbers:** When the data reporter is asked to report a number and the team does not have the information, the data reporter is advised to leave the response blank. For example, question 2.4 asks *Age in years* (of the decedent). If the team does not know the decedent’s age, then the data reporter would leave the response blank. Unknown numbers should be left blank for all numeric fields, unless the question asks the number of known events. In this instance, the data reporter would enter “0.” For example, question 12.3 asks *Over the decedent’s life, number of known nonfatal drug overdoses*.
- **Handling identifiers:** Certain data points are coded as identifiers in REDCap and automatically are removed from the data set when an individual with access to de-identified data only accesses and exports the data set. The variables coded as identifiers are indicated in the tables at the end of this document. In addition, any variables included in the *Site-Only Variables* form will not be included in a data export shared with national partners.
- **Reporting dates:** The data instrument asks about event dates to assist the team in understanding the timeline leading up to the overdose fatality. For each date asked, the data reporter is advised to enter an exact date in a *mm-dd-yyyy* format (e.g., 06-01-2020). If the exact date is not known, the data reporter is advised to enter 09-09-9999. This will prompt a skip pattern that then allows the data reporter to enter an approximate date (e.g., June 2020).
- **Verifying complete data:** At the end of each form within the data instrument is the following statement: *Change the form status to “complete” only when all fields have been reviewed and all available data has been entered*. Data reporters are strongly encouraged to review each form prior to changing the form status to “complete” to ensure high data quality. The “unverified” status can be utilized by data reporters to indicate that a form

has been partially completed but not yet verified. Marking the form as “complete” or “unverified” will change the status of the form on the dashboard; this information can be used by data reporters to track the status of data entry on particular forms of each data instrument. All forms should be put into a “complete” status when all fields have been reviewed and data entry is complete. The status of each form can be verified in the Record Status Dashboard. Forms marked as complete will be green.

## Overdose Fatality Review Case Information

### 1. OFR Administration

#### 1.1) Case-unique identifier (REDCap-generated)

Variable: case\_id

Question type: Automatically generated by REDCap

Definition: REDCap will generate a unique case ID.

Guidance: None

Reference: None

#### 1.2) Name of person completing this form

Variable: contact\_name

Question type: Text entry

Definition: First and last name of the person completing this case record information.

Guidance: This is the first and last name of the person entering the data for this case.

Reference: None

#### 1.3) Email for the person completing this form

Variable: contact\_email

Question type: Text entry

Definition: Email address of the person listed in contact\_name.

Guidance: This is the email address of the person entering the data for this case, listed in contact\_name.

Reference: None

1.4) Date completing this form

Variable: form\_date

Question type: Date entry

Definition: Date the case entry was started.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”).

Reference: None

1.5) Date the case was reviewed in the OFR

Variable: review\_date

Question type: Date entry

Definition: Date the case was reviewed at an OFR.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

Reference: None

1.6) What was the case selection criterion?

Variable: case\_criteria

Question type: Select only one.

Definition: The criterion used to select the case to review.

Guidance: Select the response that best describes the case selection criteria for this case. Specify “theme” or “other” response.

Reference: None

1.6a) Specify type of “Theme review”

Variable: case\_criteria\_theme

Question type: Text entry

Definition: Specifies the type of theme review.

Guidance: None

Reference: None

1.6b) Specify “Other”

Variable: case\_criteria\_othr

Question type: Text entry

Definition: Specifies the other case criterion used to select the case to review.

Guidance: None

Reference: None

1.7) What data sources were shared at the review meeting?

Variable: data\_type

Question type: Check all that apply.

Definition: Indicates which data were shared or provided for the case review.

Guidance: Select the response that best describes the data provided for the case. Specify “other” response. For example, if a behavioral health provider is present but does not provide data on this specific case, do not select “behavioral health record information.”

Reference: None

1.7a) Specify “Other”

Variable: data\_type\_othr

Question type: Text entry

Definition: Specifies the other data source shared at the meeting.

Guidance: None

Reference: None

1.8) What OFR members were present/represented at the review meeting?

Variable: member\_type

Question type: Check all that apply.

Definition: Indicates OFR members or partners (guest participants) present at the meeting.

Guidance: Select the response(s) that best describe those present at the case review, regardless of whether they provided data or information about the case.

Note: Overdose Fatality Review (OFR) teams may want a meeting sign-in form that allows participants to select which professional sectors they represent.

Reference: None

### 1.8a) Specify "Other"

Variable: member\_type\_othr

Question type: Text entry

Definition: Specifies the other member present/represented at the meeting.

Guidance: None

Reference: None

## 2. Decedent Demographic Information

### 2.1) Decedent's first name

Variable: first\_name

Question type: Text entry

Definition: First name of the decedent.

Guidance: This is the first name of the decedent for tracking purposes of the OFR team, indicated in REDCap as an identifier.

Reference: None

### 2.2) Decedent's last name

Variable: last\_name

Question type: Text entry

Definition: Last name of the decedent.

Guidance: This is the first name of the decedent for tracking purposes of the OFR team, indicated in REDCap as an identifier.

Reference: None

### 2.3) Decedent's date of birth (DOB)

Variable: decedent\_dob

Question type: Date entry

Definition: Date of birth of the decedent.

Guidance: This is the decedent's date of birth for tracking purposes of the OFR team, indicated in REDCap as an identifier. You must enter "MM" and "DD" as two-digit numbers (e.g., "06" for June, not "6"). Enter 09-09-9999 if exact date is unknown.

Reference: None

#### 2.3a) If exact date is not known, enter the approximate date of birth (DOB)

Variable: decedent\_dob\_app

Question type: Text entry

Definition: Approximate date of birth of the decedent.

Guidance: Enter the approximate date (e.g., June 2020).

Reference: None

### 2.4) Age in years

Variable: age\_years

Question type: Text entry

Definition: Indicates the decedent's age at death.

Guidance: Enter whole number. Range 1–120. Leave blank if age in years is unknown.

Reference: None

### 2.5) Birth state

Variable: birth\_state

Question type: Select only one.

Definition: Indicates the state in which the decedent was born.

Guidance: Identifies the state in which the decedent was born.

Reference: None

2.6) Birth country

Variable: birth\_country

Question type: Text entry

Definition: Indicates the country, other than the United States, where the decedent was born.

Guidance: Identifies the country, other than the United States, in which the decedent was born.

Reference: None

2.7) State of residence

Variable: residence\_state

Question type: Select only one.

Definition: The state in which the decedent lived.

Guidance: Identifies the state in which the decedent lived.

Reference: None

2.7a) County of residence

Variable: residence\_county\_xx

Question type: Select only one.

Definition: Indicates the county (or county equivalent) in which the decedent lived.

Guidance: See Appendix B.

Reference: None

2.7b) City of residence

Variable: residence\_city

Question type: Text entry

Definition: Indicates the city in which the decedent lived for tracking purposes of the OFR team, indicated in REDCap as an identifier.

Guidance: None

Reference: None

2.7c) Residence ZIP code

Variable: residence\_zip

Question type: Text entry (zipcode)

Definition: Indicates the postal ZIP code in which the decedent lived for tracking purposes of the OFR team, indicated in REDCap as an identifier.

Guidance: None

Reference: None

2.7d) Street address of residence

Variable: residence\_street

Question type: Text entry

Definition: Indicates the street address where the decedent lived for tracking purposes of the OFR team, indicated in REDCap as an identifier.

Guidance: None

Reference: None

2.8) Known homeless at the time of death

Variable: homeless

Question type: Select only one.

Definition: Indicates the decedent's homeless status.

Homeless persons are those who reside in one of the following: (1) places not designed for or ordinarily used as regular sleeping accommodations for human beings, including the following: a car or other private vehicle; a park, on the street, or another outdoor place; an abandoned building (i.e., squatting); a bus or train station; an airport; or a camping ground; (2) a supervised publicly or privately operated shelter or drop-in center designated to provide temporary living arrangements; congregate shelters; temporary accommodations provided by a homeless shelter (e.g., a motel room provided because the shelter was full); or transitional housing for homeless persons; or (3) do not have primary nighttime residence, which may include a motel or hotel or a doubled-up situation—meaning staying with friends or family or “couch surfing.”

Guidance: Clarification of housing instability measures.

Marking this variable “Yes, sleeping outdoors or in a shelter or transitional housing program” means that there was clear evidence in a document that the decedent was homeless, such as living in a car. This response captures people who are living in a place not meant for human habitation, such as an emergency shelter or transitional housing, or who are exiting an institution where they temporarily resided. Examples for this category include the following:

- Decedent had been living in his car since his wife discovered he had relapsed on meth and kicked him out of the family home.
- Decedent had been staying at a local homeless shelter for the past three months.
- Decedent lived in an abandoned house or building along with several other homeless individuals.
- Decedent was residing in a tent on a local campground.

Marking this variable “Yes, couch surfing or residing in motel or hotel” means that the decedent did not have a home of his or her own but was staying indefinitely with friends or family, lived in a hotel, or had a residential address that is not a shelter. This response captures people who did not have a primary nighttime residence, which may include a motel or hotel or a doubled-up situation with family, friends, or acquaintances, Examples for this category include the following:

- Decedent had been staying at a motel after being evicted two weeks ago.
- Decedent and her husband were staying with a friend indefinitely.

## 2.9) Sex of decedent

Variable: sex

Question type: Select only one.

Definition: Indicates the decedent’s biological sex at the time of the incident.

Guidance: Sex captures the biological sex of the decedent.

If the decedent is transgender, please record the decedent’s legal sex as indicated by at least one of the three primary data collection sources: death certificate, coroner/medical examiner,

or law enforcement. A disagreement on the sex of the decedent across data sources may indicate transgender status.

Reference: NVDRS 3.1.6 Sex of victim

### 2.9a) Pregnancy status

Variable: pregnancy\_status

Question type: Select only one.

Definition: Indicates whether the decedent was pregnant or recently pregnant at the time of death.

Guidance: This variable is used to identify pregnant or recently pregnant decedents and to document types of violence against pregnant and postpartum women. Decedent's pregnancy status is often noted on the death certificate and in the coroner/medical examiner's (CME) report. Findings are more likely to be authoritative if a full autopsy has been performed.

- This variable should be coded for all female decedents regardless of age.
- This variable is based on the codes by the new U.S. standard death certificate. As such, it collects pregnancy status at the time of death, not at the time of injury.
- Regardless of the decedent's age, code "unknown if pregnant within past year" if the decedent's pregnancy status is not mentioned on the CME record and not completed on the death certificate.

Reference: NVDRS 3.1.18 Victim was pregnant

### 2.9b) Did the decedent have known access to prenatal services?

Variable: prenatal\_services

Question type: Select only one.

Definition: Accessing prenatal care may be an indicator of general health access as well as an opportunity for intervention by the health care system for the care of the decedent and a fetus/newborn.

Guidance: None

Reference: None

### 2.10) Gender identity

Definition: Indicates whether the decedent self-identified as transgender or whether a friend/family member reports that the decedent self-identified as transgender.

Question type: Select only one.

Guidance: Transgender is defined as individuals “who experience incongruence between birth sex and gender identity.”

For instance, a person with a biological sex of a male may self-identify as female. An individual should be identified as transgender if he or she identified as transgender or if family, friends, physicians, or other acquaintances identified the individual as transgender. Also, check this variable if the decedent was undergoing or had undergone sex-change surgery or hormone therapy to support a sex change.

Reference: NVDRS 3.1.7 Transgender

#### 2.10a) Specify “Other”

Variable: gender\_identity\_othr

Question type: Text entry

Definition: Specifies other gender identity.

Guidance: None

Reference: None

#### 2.11) Relationship status at the time of incident

Variable: relationship\_status

Question type: Select only one.

Definition: Indicates the decedent’s relationship status at the time of the incident.

Guidance: This variable is used to identify the decedent’s relationship status at the time of the incident. The decedent’s relationship with another person or persons is described as a relationship beyond the level of friendship that may be serious or casual, short- or long-term. The relationship also involves some level of intimacy that may or may not be sexual in nature. Relationship status should be inferred only from marital status information on the death certificate or other source documents if the decedent is married at the time of the incident; otherwise, this information must be noted in either the coroner/medical examiner’s (CME) or law enforcement (LE) report. If information about the decedent’s being in a relationship is not explicitly stated in either report, code “unknown.”

If decedent’s marital status is “Married/Civil Union/Domestic Partnership,” you can infer that the decedent was in a relationship at the time of the incident.

If decedent's marital status is "Married/Civil Union/ Domestic Partnership, but separated," code this as "unknown," unless information is provided to suggest that the decedent was in a relationship at the time of the incident.

If decedent is noted to be in multiple relationships, code this as "currently in a relationship."

Regardless of the decedent's age, code "unknown" if decedent's relationship status is not mentioned in the CME or LE record.

Reference: NVDRS 3.1.16 Relationship Status

### 2.12) Sex of partner

Variable: partner\_sex

Question type: Select only one.

Definition: Indicates the decedent's partner's sex in relation to the decedent's sex.

Guidance: If the decedent's marital status is "Married/Civil Union/ Domestic Partnership" and the decedent is also in another relationship (e.g., extramarital affair), code this variable based on the sex of the partner to whom the decedent is married.

If the decedent is noted to be in multiple relationships at the time of the incident, code "unknown" unless narrative captures sex of one of the partners. If more than one partner is discussed, capture the sex of the partner that is most salient, given the context of the incident.

Reference: NVDRS 3.1.17 Sex of partner

### 2.13) Marital status

Variable: marital\_status

Question type: Select only one.

Definition: Indicates the decedent's marital status.

Guidance: Marital status is regularly completed on the death certificate and often noted in law enforcement or medical examiner records.

Marital status should be completed for persons of all ages, including children.

If a source document describes a person as being in a common-law marriage or civil union according to the laws of that state, code this as "Married/Civil Union/Domestic Partnership."

If a source document describes a person as being in a committed relationship with someone of the same sex, code this as "Married/Civil Union/Domestic Partnership." Domestic partnership is

defined as a committed intimate relationship between two adults of either the same or opposite sex, in which the partners are each other's sole partner, intend to remain so indefinitely, maintain a common residence and intend to continue to do so, are not married or joined in a civil union or domestic partnership to anyone else, and are not related in a way that would prohibit legal marriage in the U.S. jurisdiction in which the partnership was formed.

Use the "Single, not otherwise specified" option when this term is used in CME records and it is not clear whether the person was never married, widowed, divorced, or separated.

In an incident in which a person kills his or her spouse or partner, marital status should be coded as "Married/Civil Union/Domestic Partnership," not "Widowed." Use "Widowed" for a person of either sex whose spouse has died before the overdose death.

Reference: NVDRS 3.1.15 Marital status

#### 2.14) Sexual orientation

Variable: sexual\_orientation

Question type: Select only one.

Definition: Indicates the decedent's sexual orientation, which includes heterosexual, gay, lesbian, or bisexual.

Guidance: Sexual orientation is a multicomponent construct that is commonly measured in three ways: attraction (e.g., the sex of a person one is sexually attracted to), behavior (e.g., ask respondents to report on the sex of people with whom they had willing sexual experiences), and self-identification (e.g., How would you describe your sexual orientation?).

This variable captures whether the decedent self-identified as heterosexual, gay, lesbian, or bisexual based on interviews of friends, family, or acquaintances. Code this variable only if the information is reported in the LE or CME report. Sexual orientation should not be inferred from marital status. If the information is not explicitly reported, select "unknown." Currently, this information is usually not collected systematically; consequently, this variable will likely detect only decedents who were gay, lesbian, or bisexual according to friends, families, or acquaintances. Definitive information on sexual orientation may be unavailable.

Reference: NVDRS 3.1.19 Sexual orientation

#### 2.15) Race

Variable: race

Question type: Check all that apply.

Definition: Indicates the decedent's race.

Guidance:

- White: Person with origins among any of the original peoples of Europe, North Africa, or the Middle East
- Black or African American: Person with origins among any of the black racial groups of Africa
- Asian: Person with origins among any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent
- Native Hawaiian or other Pacific Islander: Person with origins among any of the original peoples of the Pacific Islands (includes Native Hawaiians)
- American Indian or Alaska Native: Person with origins among any of the original peoples of North America and who maintains cultural identification through tribal affiliation or community recognition (includes Alaska Natives)
- Unspecified: If a person's ethnicity is provided in place of his or her race (e.g., race is given as "Hispanic" and no other valid race value is given), mark the person's race as "unspecified."
- For multiracial decedents, please check each race identified in source documents (e.g., if the decedent is identified as "white" and "Asian," please check "white" and "Asian"). If source documents indicate "Mulatto," check both "white" and "black." If "Asian/Pacific Islander" is indicated, check both "Asian" and "Pacific Islander." These standards were used by the U.S. Census Bureau in the 2000 decennial census.

Reference: NVDRS 3.1.13 Victim race variables

2.15a) Specify "Other"

Variable: race\_othr

Question type: Text entry

Definition: Specifies other racial group.

Guidance: None

Reference: None

2.16) Verified tribal status

Variable: tribal\_status

Question type: Select only one.

Definition: Indicates the decedent's verified tribal status. Verified tribal status is a legal status and needs to be confirmed with tribal agencies.

Guidance: If decedent has a known or verified tribal status, check “yes”. If decedent’s tribal status is unknown or no, check “no.”

Reference: None

#### 2.16a) Specify tribe

Variable: tribal\_status\_so

Question type: Text entry

Definition: Specifies tribe of which decedent was a member.

Guidance: None

Reference: None

#### 2.17) Hispanic/Latino/Spanish ethnicity

Variable: hispanic\_ethnicity

Question type: Select only one.

Definition: Ethnicity is a concept used to differentiate population groups based on shared cultural characteristics or geographic origins. Decedents with Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin should be considered Hispanic or Latino, regardless of race.

Guidance: None

Reference: NVDRS 3.1.14 Hispanic/Latino/Spanish: Ethnicity

#### 2.18) English speaker

Variable: english\_language

Question type: Select only one.

Definition: Indicates whether the decedent spoke English and whether English was the decedent’s primary language.

Guidance: None

Reference: None

#### 2.18a) Specify decedent’s primary language

Variable: English\_language\_sp

Question type: Text entry

Definition: Specifies decedent's primary language

Guidance: None

#### 2.19) Known service in the U.S. armed forces

Variable: military

Question type: Select only one.

Definition: Indicates whether the decedent ever served in the U.S. armed forces (current or former military personnel).

Guidance: Military status is indicated on the death certificate in the section captioned "Ever a member of U.S. Armed Forces†." If a state's death certificate has the variant wording "If U.S. war veteran, specify war," a blank or missing response should be coded "no."

Reference: NVDRS 3.1.20 Current or former military personnel

#### 2.20) Usual occupation

Variable: occupation\_text

Question type: Text entry

Definition: Indicates the decedent's usual occupation as recorded on the death certificate.

Guidance: Most states' registries of vital records encode the decedent's usual occupation and industry on the death certificate. Usual occupation/industry is not necessarily the decedent's current occupation/industry. Provide information exactly as it appears in the death certificate data. Sites should NOT code the information themselves, since industry and occupation coding require special training.

The codes "999" for occupation and "090" for industry are assigned by the Occupation and Industry coder to indicate "blank, unknown, or not available." These codes should be used only if they appear in the death certificate data.

If the text descriptor is recorded on the death certificate and a numeric code is not provided, report only the text information and use the code "080" to indicate that the actual code is unavailable.

If the death certificate is blank (e.g., both code and text information is blank or missing), use the code "080" to indicate unavailable and use the text field to indicate "blank, unknown, or not available."

Reference: NVDRS 3.2.4.4

### 2.21) Occupation status at time of death

Variable: current\_occupation

Question type: Select only one.

Definition: Indicates the decedent's occupation at the time of death.

Guidance: Occupation is an indicator of socioeconomic status. Certain occupations may also be associated with the occurrence of overdose deaths.

Report the current occupation in a text field exactly as it appears in one of the required data sources.

If the decedent is not employed, select from the options listed.

- People who work 17.5 hours or more per week are considered employed; people who work less than that are not.
- For decedents under the age of 14, the current occupation should be listed as "N/A" unless the CME report lists an occupation.

The information can later be coded at the national level using Standard Occupational Classifications. Note that "current occupation" is different from "usual occupation," which is recorded on the death certificate.

Reference: NVDRS 3.2.5 (modified)

### 2.21a) Specify decedent's current occupation

Variable: occupation\_sp

Definition: Specifies the decedent's current occupation.

Guidance: None

Reference: None

### 2.22) Highest education obtained

Variable: education\_level

Question type: Select only one.

Definition: Indicates the decedent's educational level as measured by the highest degree attained.

Guidance: The options for the "Education" variables are those on the 2003 death certificate. Since not all states may have moved to the new format, the pre-2003 education format is provided in the "Number years education" variable. Only one of the two (either Education Level OR Education Years) must be completed.

- Vocational and trade school should be coded as "High school graduate."
- For young children who are not in school, code as "0" or 8th grade or less

Reference: NVDRS 3.2.7 Education by degree

### 2.23) Known disability at time of overdose incident

Variable: disability\_status

Question type: Check all that apply.

Definition: Indicates what type of disability the decedent had at the time of the overdose.

Guidance:

- None (0)—Decedent was not known to have a disability
- Yes, Unknown type of disability (1)—Decedent had a disability of unknown type
- Yes, Physical disability (2)—Decedent's disability was physical (e.g., paraplegia, cerebral palsy)
- Yes, Developmental disability (3)—Decedent's disability was developmental (e.g., mental retardation)
- Yes, Sensory disability (4)—Decedent's disability was sensory (e.g., blindness, deafness)

Reference: NVDRS 10.9 Disability variables

### 2.24) Did the decedent have any children, under the age of 18, at the time of the overdose incident?

Variable: children

Question type: Select only one.

Definition: Indicates whether the decedent had any minor children.

Guidance: If the decedent is known to be the parent or guardian of any children under age 18, select "yes." If it is known that the decedent does not have children under age 18, select "no." If it is unknown, select "unknown."

Reference: None

### 3. Cause of Death

#### 3.1) Enter ICD-10 code for cause of death

Variable: cause\_death

Question type: Text entry

Definition: Indicates the final ICD-10 code.

Guidance: Enter the final ICD-10 code assigned by the National Center for Health Statistics if available. (Part 1 of death certificate)

The text that the death certifier supplies on the death certificate regarding the causes of death can be used to identify reportable cases in a timely manner.

Reference: Death certificate

#### 3.2) Immediate cause of death (Part 1a)

Variable: death\_cause\_1

Question type: Text entry

Definition: Indicates the immediate cause of death (text from death certificate): the final disease, injury, or complication directly causing death.

Guidance: The text that the death certifier supplies on the death certificate regarding the causes of death can be used to identify reportable cases in a timely manner. (Part 1a of the death certificate)

- Enter the text exactly as it appears on the death certificate.
- The letters in the variable names correspond to the lettered lines appearing on the death certificate.
- While coded data that captures the underlying cause of death using ICD-10 codes is an efficient means of identifying confirmed cases, these data will not be available in some states for many months. Consequently, this text information may help in identifying cases.

As defined by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS), Instructions for Completing the Cause-of-Death Section of the Death Certificate. Source: [http://www.cdc.gov/nchs/data/dvs/blue\\_form.pdf](http://www.cdc.gov/nchs/data/dvs/blue_form.pdf). Causes of death are typically listed from top to bottom in the order seen here, with immediate cause of death listed first.

Reference: NVDRS 4.5.2 Cause of death variables.

### 3.3) Condition listed in b

Variable: death\_cause\_2

Question type: Text entry

Definition: Indicates the cause leading to the immediate cause of death (text from death certificate): next sequential cause of death, if any, leading to the immediate cause of death.

Guidance: The text that the death certifier supplies on the death certificate regarding the causes of death can be used to identify reportable cases in a timely manner. (Part 1b of the death certificate)

- Enter the text exactly as it appears on the death certificate.
- The letters in the variable names correspond to the lettered lines appearing on the death certificate.
- While coded data that captures the underlying cause of death using ICD-10 codes is an efficient means of identifying confirmed cases, these data will not be available in some states for many months. Consequently, this text information may help in identifying cases.

As defined by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (CDC NCHS), Instructions for Completing the Cause-of-Death Section of the Death Certificate. Source: [http://www.cdc.gov/nchs/data/dvs/blue\\_form.pdf](http://www.cdc.gov/nchs/data/dvs/blue_form.pdf). Causes of death are typically listed from top to bottom in the order seen here, with immediate cause of death listed first.

Reference: NVDRS 4.5.2 Cause of death variables.

### 3.4) Condition listed in c

Variable: death\_cause\_3

Question type: Text entry

Definition: Indicates the cause leading to the immediate cause of death (text from death certificate): next sequential cause of death, if any, leading to the immediate cause of death.

Guidance: The text that the death certifier supplies on the death certificate regarding the causes of death can be used to identify reportable cases in a timely manner. (Part 1c of the death certificate)

- Enter the text exactly as it appears on the death certificate.
- The letters in the variable names correspond to the lettered lines appearing on the death certificate.

- While coded data that captures the underlying cause of death using ICD-10 codes is an efficient means of identifying confirmed cases, these data will not be available in some states for many months. Consequently, this text information may help in identifying cases.

As defined by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (CDC NCHS), Instructions for Completing the Cause-of-Death Section of the Death Certificate. Source: [http://www.cdc.gov/nchs/data/dvs/blue\\_form.pdf](http://www.cdc.gov/nchs/data/dvs/blue_form.pdf). Causes of death are typically listed from top to bottom in the order seen here, with immediate cause of death listed first.

Reference: NVDRS 4.5.2 Cause of death variables.

### 3.5) Condition listed in d

Variable: death\_cause\_4

Question type: Text entry

Definition: Indicates the cause leading to the immediate cause of death (text from death certificate): next sequential cause of death, if any, leading to the immediate cause of death.

Guidance: The text that the death certifier supplies on the death certificate regarding the causes of death can be used to identify reportable cases in a timely manner. (Part 1d of the death certificate)

- Enter the text exactly as it appears on the death certificate.
- The letters in the variable names correspond to the lettered lines appearing on the death certificate.
- While coded data that captures the underlying cause of death using ICD-10 codes is an efficient means of identifying confirmed cases, these data will not be available in some states for many months. Consequently, this text information may help in identifying cases.

As defined by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (CDC NCHS), Instructions for Completing the Cause-of-Death Section of the Death Certificate. Source: [http://www.cdc.gov/nchs/data/dvs/blue\\_form.pdf](http://www.cdc.gov/nchs/data/dvs/blue_form.pdf). Causes of death are typically listed from top to bottom in the order seen here, with immediate cause of death listed first.

Reference: NVDRS 4.5.2 Cause of death variables.

### 3.6) Enter other significant conditions contributing to death but not resulting in underlying cause listed in Part 1 (Part 2 of death certificate)

Variable: significant\_conditions

Question type: Text entry

Definition: Indicates other significant conditions contributing to the death but not resulting in underlying cause in Part 1, yet included in Part 2 of the death certificate.

Guidance: The text that the death certifier supplies on Part 2 of the death certificate regarding the causes of death can be used to identify reportable cases in a timely manner. (Part 2 of the death certificate)

- Enter the text exactly as it appears on the death certificate.
- While coded data that captures the underlying cause of death using ICD-10 codes is an efficient means of identifying confirmed cases, these data will not be available in some states for many months. Consequently, this text information may help in identifying cases.

As defined by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (CDC NCHS), Instructions for Completing the Cause-of-Death Section of the Death Certificate. Source: [http://www.cdc.gov/nchs/data/dvs/blue\\_form.pdf](http://www.cdc.gov/nchs/data/dvs/blue_form.pdf). Causes of death are typically listed from top to bottom in the order seen here, with immediate cause of death listed first.

Reference: NVDRS 4.5.2 Cause of death variables.

### 3.7) Describe how the injury [overdose] occurred (Part 2 of death certificate)

Variable: how\_overdose

Question type: Text entry

Definition: The text that the death certified supplies on Part 2 of the death certificate regarding how the injury [overdose] occurred.

Guidance: The text that the death certifier supplies on the death certificate regarding the causes of death can be used to identify reportable cases in a timely manner. (Part 2 of the death certificate)

- Enter the text exactly as it appears on the death certificate.
- The letters in the variable names correspond to the lettered lines appearing on the death certificate.
- While coded data that captures the underlying cause of death using ICD-10 codes is an efficient means of identifying confirmed cases, these data will not be available in some states for many months. Consequently, this text information may help in identifying cases.

As defined by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (CDC NCHS), Instructions for Completing the Cause-of-Death Section of the Death

Certificate. Source: [http://www.cdc.gov/nchs/data/dvs/blue\\_form.pdf](http://www.cdc.gov/nchs/data/dvs/blue_form.pdf). Causes of death are typically listed from top to bottom in the order seen here, with immediate cause of death listed first.

Reference: NVDRS 4.5.2 Cause of death variables.

### 3.8) Manner of death (Part 2 of death certificate)

Variable: death\_manner

Question type: Select only one.

Definition: Indicates the manner of death. The manner of death is a broad classification of the cause of death as natural, accidental, suicide, homicide, pending investigation, or not determined. Manner is determined by the coroner or medical examiner and, when considered in conjunction with the narrative cause of death statements on the death certificate, is the basis for how the official underlying cause of death is coded in vital statistics data.

Guidance: Data describing the manner of death are useful for public health surveillance, health care planning and administration, clinical and health services, and epidemiologic research. (Part 2 of the death certificate)

- Record the manner of death exactly as it appears on the death certificate and CME report.
- If a manner is noted as “pending investigation,” check back on the case later to update the manner. “Pending” is considered a temporary designation.
- Since states’ death certificates may have a state-added code to indicate “legal intervention” as the manner of death, code “legal intervention” only if it is presented on the death certificate (the abstractor-assigned type of death variable can capture legal intervention deaths that are not coded on the death certificate in that fashion).

Reference: NVDRS 4.1 Manner of death variable.

## 4. Scene of Overdose and Death

### 4.1) Location of overdose incident

Variable: overdose\_location

Question type: Select only one.

Definition: Indicates the type of place at which the overdose occurred.

Guidance: Data on the type of place at which an injury occurred help to describe the injury-producing event and are valuable for planning and evaluating prevention programs.

- Decedent’s residence: Fatal overdose occurred at decedent’s own residence. This includes the area immediately surrounding the home such as the yard and garage, but not in a vehicle.
- Relative’s residence: Fatal overdose occurred at a relative’s home or the area immediately surrounding it. This category includes cases where the decedent was temporarily residing with the relative, but not in a vehicle.
- Friend/acquaintance’s residence: Fatal overdose occurred at a friend’s home or in the area immediately surrounding it. This category includes cases in which the decedent was temporarily residing with the friend/acquaintance, but not in a vehicle.
- Street/road/sidewalk/alley (not in vehicle): Fatal overdose occurred on a sidewalk or on a roadway, street, or highway, but not in a vehicle.
- Motor vehicle: Fatal overdose occurred in a vehicle, regardless of the vehicle's location.
- Hotel or motel: Fatal overdose occurred at hotel or motel.
- Residential living facility: This includes temporary and transitional housing, crisis shelters, domestic violence shelters, and sober-living homes.
- Jail, prison, or detention facility: Fatal overdose occurred at a jail, prison, or other detention center.
- Park, playground, or public use area: Fatal overdose occurred in an area used for public recreation such as a park or public walking trail, but not in a vehicle.
- School: Fatal overdose occurred at a public or private educational institution.
- Other: Fatal overdose occurred at a commercial establishment not otherwise listed on this form such as a restaurant, laundromat, or bowling alley.

Reference: None

#### 4.1a) Specify “Other”

Variable: overdose\_location\_othr

Question type: Text entry

Definition: Specifies the other type of overdose location.

Guidance: None

Reference: None

#### 4.2) State of overdose incident

Variable: overdose\_state

Question type: Select only one.

Definition: Indicates the state in which the overdose occurred.

Guidance: None

Reference: None

#### 4.3) County of overdose

Variable: overdose\_county\_xx

Question type: Select only one.

Definition: Indicates the county (or county equivalent) in which the overdose occurred.

Guidance: See Appendix B.

Reference: None

#### 4.4) City of overdose

Variable: overdose\_city

Question type: Text entry

Definition: Indicates the city in which overdose occurred for tracking purposes of the OFR team, indicated in REDCap as an identifier.

Guidance: None

Reference: None

#### 4.5) ZIP code of overdose incident

Variable: overdose\_zip

Question type: Text entry

Definition: Indicates the postal ZIP code in which the overdose occurred for tracking purposes of the OFR team, indicated in REDCap as an identifier.

Guidance: None

Reference: None

#### 4.6) Street address of overdose incident

Variable: overdose\_address

Question type: Text entry

Definition: Indicates street address where the overdose occurred for tracking purposes of the OFR team, indicated in REDCap as an identifier.

Guidance: None

Reference: None

4.7) Did the location of the overdose death differ from the overdose incident?

Variable: overdose\_death\_location

Question type: Select only one.

Definition: Confirms whether location of overdose incident and death are the same or different.

Guidance: None

Reference: None

4.7a) Location of death

Variable: death\_location

Question type: Select only one.

Definition: Type of place at which the death occurred.

Guidance: Data on the type of place at which the death occurred:

- Decedent's residence: Fatal overdose occurred at decedent's own residence. This includes the area immediately surrounding the home, such as the yard or garage, but not in a vehicle.
- Relative's residence: Fatal overdose occurred at relative's home or the area immediately surrounding it. This category includes cases where the decedent was temporarily residing with the relative, but not in a vehicle.
- Friend/acquaintance's residence: Fatal overdose occurred at a friend's home or the area immediately surrounding it. This category includes cases where the decedent is temporarily residing with the friend/acquaintance, but not in a vehicle.
- Street/road/sidewalk/alley (not in vehicle): Fatal overdose occurred on a sidewalk or on a roadway, street, or highway, but not in a vehicle.
- Motor vehicle: Fatal overdose occurred in a vehicle, regardless of the vehicle's location.
- Hotel or motel: Fatal overdose occurred at a hotel or motel.
- Residential living facility: This includes temporary and transitional housing, crisis shelters, domestic violence shelters, and sober-living homes.
- Jail, prison, or detention facility: Fatal overdose occurred at a jail, prison, or other detention center.

- Park, playground, or public use area: Fatal overdose occurred in an area used for public recreation such as a park or public walking trail, but not in a vehicle.
- School: Fatal overdose occurred at a public or private educational institution.
- Other: Fatal overdose occurred at a commercial establishment not otherwise listed on this form, such as a restaurant, laundromat, or bowling alley.

Reference: None

#### 4.7b) Specify “Other”

Variable: death\_location\_othr

Question type: Text entry

Definition: Specifies other type of location where death occurred.

Guidance: None

Reference: None

#### 4.7c) State of overdose death

Variable: death\_state

Question type: Select only one.

Definition: Indicates the state in which the death occurred.

Guidance: Identifies the state in which the death certificate was filed. This variable will be used to facilitate data sharing across states when state of injury and state of death differ.

- State of death will usually be the same as state of injury; however, on occasion, the two will differ. For instance, a decedent who is injured in one state may be transported to another state for emergency medical care.
- If the state of death is unknown, enter the state in which the person was pronounced dead (i.e., the state that issued the death certificate).
- If the person was not pronounced dead in any U.S. state or territory, enter 88 for “Not applicable.” This can still be an NVDRS case if the decedent was fatally injured within a participating NVDRS state.
- A death on an American Indian reservation should be coded as the state in which it is located or, if the reservation spans multiple states, based on state borders.

Reference: None

#### 4.7d) County of death

Variable: death\_county\_xx

Question type: Select only one.

Definition: Indicates the county (or county equivalent) in which the death occurred.

Guidance: See Appendix B.

Reference: None

#### 4.7e) City of death

Variable: death\_city

Question type: Text entry

Definition: City in which the death occurred for tracking purposes of the OFR team, indicated in REDCap as an identifier.

Guidance: None

Reference: None

#### 4.7f) ZIP code of death

Variable: death\_zip

Question Type: Text entry

Definition: Indicates the postal ZIP code in which the death occurred for tracking purposes of the OFR team, indicated in REDCap as an identifier.

Guidance: None

Reference: None

#### 4.7g) Street address of overdose death

Variable: death\_address

Question type: Text entry

Definition: Indicates street address where the overdose occurred for tracking purposes of the OFR team, indicated in REDCap as an identifier.

Guidance: None

Reference: None

4.8) Date last known to be alive before overdose

Variable: last\_alive\_date

Question type: Text entry

Definition: Indicates the date the decedent was last seen or heard from alive before the onset of overdose signs/symptoms. For further Definition of what constitutes overdose signs/symptoms, please see variable overdose\_date.

Guidance: This is the date that the decedent was last seen or heard from alive before the fatal overdose occurred. You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

Reference: SUDORS 4.1.d Date Last Seen Alive

**4.8a) If exact date is not known, enter the approximate date decedent was last known to be alive before overdose**

Variable: last\_alive\_date\_app

Question type: Text entry

Definition: Approximate date decedent was last known to be alive before overdose.

Guidance: Enter the approximate date (e.g., June 2020).

Reference: None

4.9) Date of overdose incident

Variable: overdose\_date

Definition: Indicates the date of the overdose leading to death.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

Overdose date refers to the onset of overdose or the manifestation of overdose symptoms, such as the decedent becoming unresponsive to stimulation or becoming unconscious, not the use of a substance.

The onset of overdose and substance use may often coincide, especially in the case of rapid overdose onset. Focusing on circumstances surrounding onset of overdose provides critical information about response.

When coding the time and date of injury, use the time and date that the overdose occurred (i.e., when the signs/symptoms of the overdose started). If it is unknown when the overdose started, use the following guidance:

- Time and date of injury are often listed on the death certificate and can be used as listed in the absence of other information. If there is information in the CME report, however, indicating that the date and/or time of injury differs from that given on the death certificate, the information from the report can be used in place of that from the death certificate. If the CME report indicates that there is uncertainty about the date and/or time of injury, this information should be incorporated into what is entered, even if the death certificate states specific date/time. For example, if the death certificate lists January 1 at 9:00 a.m. as the date and time of injury, but the CME report indicates that the decedent was last known alive on December 25 and discovered obviously deceased at 9:00 a.m. on January 1, it can be assumed that the overdose did not actually occur at 9:00 a.m. on January 1. In this instance, date of injury should be entered as 09-09-9999 to indicate that it could have happened any time between December 25 and January 1 (and, as such, all parts of the date are unknown, since that period includes two different calendar years).
- For cases in which the decedent went to sleep with no signs of overdose, enter the date the decedent went to sleep as the date of injury.
- In some cases, estimates may be provided about how long before the overdose death the overdose was recognized. In these cases, estimate the date of injury. For instance, a report may indicate that 9-1-1 was called three hours before the decedent died in the hospital at 3:00 p.m. on 10/1/2016. Calculate the time and date of injury by subtracting three hours from the date and time of the death.
- If a decedent was discovered unresponsive less than or equal to one hour after being last known alive, the time last known alive can be used as the time of injury

Reference: NVDRS 4.3.2.1 date of Injury and SUDORS 5.2a Date of Injury

4.9a) If exact date is not known, enter the approximate date of overdose incident

Variable: overdose\_date\_app

Question type: Text entry

Definition: Approximate date of overdose incident.

Guidance: Enter the approximate date (e.g., June 2020).

Reference: None

4.10) Date of death

Variable: death\_date

Question type: Text entry

Definition: Indicates the date of the overdose death.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”).

4.10a) If exact date is not known, enter the approximate date of death

Variable: death\_date\_app

Question type: Text entry

Definition: Approximate date of death.

Guidance: Enter the approximate date (e.g., June 2020).

Reference: None

## 5. Drugs at the Scene of Death

5.1) How was/were the drug(s) administered?

Variable: administration\_route

Question type: Check all that apply.

Definition: Indicates how the decedent may have administered the substance leading to the overdose death.

This section captures scene and witness evidence describing how the decedent may have administered substances leading up to the fatal overdose, including substances that were and were not indicated as contributing to death.

More than one route of administration can be endorsed if evidence is found at the scene (e.g., smoked crack and injected heroin) or mentioned by witnesses.

Because it can be difficult to link specific substances to the specific routes of administration (e.g., injection, sniffing/snorting, or ingestion), abstractors are asked only to indicate a route of administration if there were any witness reports, overdose scene evidence, or autopsy evidence supporting a particular route of administration (e.g., recent track marks would indicate injection). Physical symptoms alone should not be used as evidence of a specific route of administration (e.g., pulmonary edema would not on its own be evidence of snorting/sniffing; signs that the decedent had vomited would not imply ingestion); however, physical evidence from an autopsy or other report indicating recent track marks could be used to support evidence of injection. If there is evidence to link a specific route of administration to a specific substance, it should be included in the narrative; e.g., if the report indicates that the decedent

had injected heroin and also ingested alprazolam, Evidence of injection and evidence of ingestion should both be selected, and the narrative should include the information about which substance went with which route.

Guidance:

- No information on route of administration: There was no witness, death scene, or autopsy evidence that indicated the route of administration.
- Evidence of buccal: Witness, death scene, or autopsy evidence suggests that substance(s) used leading up to the fatal overdose were administered buccally. Buccal administration operates by dissolving the medication between the gums and the cheek. Evidence of buccal administration includes witness reports or the discovery of pieces of patches or other medication between the gums and the cheek.
- Evidence of freebasing: Witness, death scene, or autopsy evidence suggests that substance(s) used leading up to the fatal overdose were administered by freebasing or providing a heat source to the substance and inhaling.
- Evidence of ingestion: Witness, death scene, or autopsy evidence suggests that substance(s) used leading up to the fatal overdose were taken orally in pill, tablet, or liquid form. Evidence of ingestion includes witness reports of taking pills or tablets orally or ingesting liquid orally (e.g., liquid methadone) or the discovery of prescription pills, prescription bottles, liquid substance(s), or vials for containing liquid substances at the scene of the overdose or on the decedent's body.
- Evidence of injection: Witness, death scene, or autopsy evidence suggests that the decedent injected substance(s) leading up to the fatal overdose. Evidence of injection includes witness reports of injecting, documentation of items used to prepare and inject substances found at the scene (e.g., needles, cookers, filters, tourniquets, alcohol pads), and/or track marks found on decedent that appear to be recent.
  - Track marks often present as dark scars/pigmentation marks that follow the track of veins. Fresh tracks are identified as unhealed puncture wounds. Usually found on forearms and hands but often on neck, groin, legs, feet, and other parts of the body.
  - Tying tourniquets around arms or legs facilitates injection of drugs by causing veins to bulge out from restricted blood flow. Popular tourniquets used to facilitate injection include belts and large elastic bands (similar to those used in hospitals).
  - Objects may be used to dissolve (i.e., cook up) powdered and solid drugs to prepare for injection. Spoons, bottle tops, and crushed soda cans are the most popular items used to “cook” substances.
  - A syringe, a hollow needle, or another apparatus facilitates putting fluid into the body, piercing the skin to sufficient depth for the fluid to be administered.
  - Materials may be used to remove particulate matter and other foreign objects from a substance solution before it is injected. Filters commonly used before injecting illicit substances include cotton balls, cotton swabs, and cigarette filters.

- A witness reports that the decedent injected substance(s) leading up to the fatal overdose.
- Evidence of smoking: Witness, death scene, or autopsy evidence suggests that the decedent smoked substance(s) leading up to the fatal overdose. Evidence of smoking includes witness reports of smoking and drug paraphernalia at the scene of the overdose associated with smoking, such as pipes, stems, tinfoil, and vape pens. Matches, disposable lighters, and gas torches are also indications of smoking.
- Evidence of snorting/sniffing: Witness, death scene, or autopsy evidence suggests that the decedent snorted or sniffed substance(s) leading up to the fatal overdose. Evidence of snorting or sniffing includes witness reports of snorting or sniffing; drug paraphernalia at the overdose scene associated with snorting or sniffing, such as razor blades or credit cards used to chop and separate powder; straws, rolled paper or dollar bills, or tubes for nasal inhalation; powder visible on a table/mirror; or powder on the decedent's nose.
- Evidence of sublingual: Witness, death scene, or autopsy evidence suggests that substance(s) used leading up to the fatal overdose were administered sublingually. Sublingual administration involves placing a medication such as pills or lozenges under the tongue to be dissolved. Evidence of sublingual administration includes witness reports or the discovery of lozenges or pills under the decedent's tongue or in the decedent's mouth as well as finding prescription bottles at the drug overdose scene that contain medications administered sublingually.
- Evidence of suppository: Witness, death scene, or autopsy evidence suggests that substance(s) used leading up to the fatal overdose were delivered through a suppository. A suppository is a medication that is often cylindrical in shape and less than one inch in length. A suppository is designed to be inserted into the rectum or vagina, where it dissolves. Evidence of suppository use includes witness reports or the discovery of suppositories at the overdose scene or on the decedent's body.
- Evidence of transdermal: Witness, death scene, or autopsy evidence suggests that substance(s) used leading up to the fatal overdose were absorbed through the decedent's skin. Evidence of transdermal administration includes witness reports of the use of transdermal patches or the discovery of transdermal patches on the body of the decedent or at the scene of the overdose.
- Evidence of vaping/vaporizing: Witness, death scene, or autopsy evidence suggests that substance(s) used leading up to the fatal overdose were administered via vaping or vaporizing device or method.

Reference: SUDORS 4.3.h to 4.3.p Route of Administration (modified to add vaping/vaporizing definition and freebasing)

5.2) What types of substance(s) were known to be found on the scene?

Variable: scene\_substances

Question type: Check all that apply.

**Definition:** Indicates whether the CME death investigation found evidence of prescription or illicit drugs at the scene of the overdose or drugs were reported by witnesses.

**Guidance:** This information is critical to understanding the extent to which illicit and prescription drugs contribute to opioid overdose deaths. Toxicology findings on tests of the decedent's body, such as tests for blood and urine, should not be considered when coding items in this subsection. Examples of evidence for each substance are shown below.

Evidence of prescription drugs:

- Examples of evidence that should be checked include the following:
  - A witness reports that the decedent was using prescription drugs before overdose onset.
  - Investigation-tested pills or other drugs found at the scene of the overdose and the forensic findings are consistent with prescription drugs.
  - Prescription pills or pill bottles were found at the overdose scene or on the decedent's body. These include prescription drugs prescribed and not prescribed for the decedent.
  - Other forms of prescription drugs were found at the scene of the overdose, such as patches, vials, or liquid medicines (either prescribed for the decedent or not).
  - Witness or prescription drug monitoring data indicate that the decedent was taking a prescription drug, which was found at the scene.
  - Prescription drugs were found in medicine cabinets, drawers, or pill containers, and other evidence such as witness reports indicate that the decedent was taking the drugs before the overdose.
- Examples of evidence that should not be coded include the following:
  - Do not code based on toxicology tests performed on the decedent's body, such as tests for blood and urine.
  - Do not code if prescription drugs were found in medicine cabinets, drawers, or pill containers and there was no other evidence that the decedent had taken the drugs before the overdose. Since the scene of the overdose can be interpreted broadly, if there is any question about whether to include evidence of prescription drugs found, err on the side of inclusion. Please contact the opioid surveillance help desk and/or your state support team for additional guidance.
- Prescription for decedent: There is evidence that prescription drugs were used leading up to the fatal overdose and that the drugs were prescribed to the decedent.
  - Prescription bottles found at the scene of the overdose have labels indicating that the drug was prescribed to the decedent.
  - Prescription Drug Monitoring Program (PDMP) data indicates that prescription drugs prescribed to the decedent were consistent with drugs found at the scene.
  - Witnesses report that the drugs were prescribed to the decedent.
  - The physician or authorized prescriber confirms that the prescription drugs found at the scene were prescribed to the decedent.

- Diverted prescription: There is evidence that prescription drugs were used leading up to the fatal overdose and that the drugs were not prescribed to the decedent.
  - Prescription bottles found at the scene of the overdose have labels indicating that the drug was prescribed to a person other than the decedent.
  - Prescription drug monitoring program data indicates that the prescriptions drugs found at the scene did not match the drugs prescribed to the decedent.
  - Witnesses report that the drugs were not prescribed to the decedent or were prescribed to them (i.e., to the witnesses).
  - Witnesses report that the decedent commonly purchased diverted prescription drugs from illegal sources and had no legitimate prescriptions.
- Prescription for undetermined individual: There is evidence that prescription drugs were used leading up to the fatal overdose, but there is no information on whether the drugs were prescribed to the decedent or diverted (i.e., prescribed to someone other than the decedent).
  - In some deaths, prescription drugs may be found at the scene, but there is insufficient evidence to determine whether the drugs were prescribed to the decedent or were diverted. For example, the prescription label is damaged or missing and the name cannot be determined. In this case, check the box associated with this variable.
- Over-the-counter medications: There is evidence that over-the-counter medications were used leading up the fatal overdose.
  - Over-the-counter bottles found at the scene of the death and there is evidence the decedent was taking the drugs before the overdose, such as witness reports, recent receipt and empty bottles, etc.

### Evidence for illicit substances:

- Crystal: Check the box associated with this variable if a crystal substance is found at the scene of the fatal overdose or on the decedent's body. Crystal meth is often found in a crystalline form and is usually white or slightly yellow. Crystal meth can come in large rock-like chunks. Other drugs can also come in crystal or rock form. Findings from toxicology tests of the decedent's body, such as tests for blood and urine, should not be considered when coding this variable. For instance, do not check the box associated with this variable solely on the basis of methamphetamines found in the blood of the decedent.
- Illicit pills: Pills or tablets that strongly resemble prescription pills may be revealed by appearance or forensic chemistry to be counterfeit copies not produced by pharmaceutical companies. Check the box associated with this variable if there is evidence that pills found at the scene were counterfeit. Pills and tablets that closely resemble prescription pills and tablets are sometimes illegally manufactured and distributed erroneously as diverted prescription pills. These counterfeit pills contain a variety of substances. In 2016, the Drug Enforcement Administration and the CDC released alerts about widespread distribution of counterfeit prescription pills containing fentanyl.

- **Packaging:** Packaging associated with illicit substances can be an indication that illicit substances were used. Common illicit drug packaging includes glassine or corner-cut Baggies, often used for illicit substances in powder form. Check the box associated with this variable if the CME report mentions packaging found at the scene that is consistent with illicit substances. Mention of nonspecific “drug paraphernalia” could be used to code this variable if there is some indication that the paraphernalia was for illicit substances.
- **Powder:** Illicit substances, such as heroin, illicitly manufactured fentanyl, and cocaine, often come in powder form. Check the box associated with this variable if powders are found at the scene of the fatal overdose or on the decedent’s body. Powders found at the scene of the overdose are consistent with illicit substance use. For instance, powdered cocaine often looks like a white powder, while powdered heroin can be white, tannish, or brown. If powder is mentioned and no information is available on whether the substance was tested and confirmed to be an illicit substance, check the box associated with this variable. Findings from toxicology tests of the decedent’s body, such as tests for blood and urine, should not be considered when coding this variable. For instance, do not check the box associated with this variable if cocaine is found in the blood of the decedent, unless scene evidence of powder is available
- **Tar:** One form of heroin, called “black tar,” has a tar-like appearance. Check the box associated with this variable if a substance with a tar-like appearance and consistency is found at the scene of the fatal overdose or on the decedent’s body. Black tar heroin is commonly sold west of the Mississippi and often looks like melted tar or a resinous substance that can range in color from dark brown to black. Findings from toxicology tests of the decedent’s body, such as tests for blood and urine, should not be considered when coding this variable. For instance, do not check the box associated with this variable if heroin is found in the blood of the decedent, unless scene evidence of tar is available.
- Findings from toxicology tests of the decedent’s body, such as tests for blood and urine, should not be considered when coding this variable.
- Check the box associated with this variable only when the CME report confirms that prescription pills found at the scene are counterfeit. This conclusion will most likely require the CME or law enforcement to conduct forensic tests on the prescription drugs (often, these tests will not be available, and/or it may not be possible for results to be linked to the decedent) or results may be revealed by deviations between the design and labeling of the counterfeit pill and the prescription pill.
- **Other:** There is evidence of illicit substances found at the scene of the overdose or on the decedent’s body for any form of substance or other evidence that is not captured by categories. If the box associated with this variable is checked, please briefly describe the evidence in the text box located underneath the variable. Findings from toxicology tests of the decedent’s body, such as tests for blood and urine, should not be considered when coding this variable. For instance, do not check the box based solely on the heroin found in the blood of the decedent.
- **None:** Check if there were no substances known to be at the scene.

5.2a) Specify “Other” substance(s)

Variable: scene\_substances\_othr

Question type: Text entry

Definition: Specifies other substances found at the scene.

Guidance: None

Reference: None

5.2b) What over-the-counter medications were noted at the scene?

Variable: substance\_otc

Question type: Check all that apply.

Definition: Indicates the type(s) of over-the-counter medication(s) identified at the scene.

Guidance: None

Reference: None

5.2c) Specify “Other” over-the counter medication(s)

Variable: substance\_otc\_otr

Question type: Text entry

Definition: Specifies other over-the-counter medication(s).

Guidance: None

Reference: None

## **6. Death Investigation and Toxicology Information**

6.1) Was an autopsy performed?

Variable: autopsy

Question type: Select only one.

Definition: Indicates whether an autopsy was performed on the decedent.

Guidance: Decedents who have been autopsied are likely to have more reliable cause-of-death codes and pregnancy findings. A yes/no item appears on the death certificate to indicate whether an autopsy was performed. Autopsies are not performed on every case that comes to the attention of a CME. A visual-only autopsy (that is, the body was visually inspected but not physically examined) does not qualify as an autopsy here, but a partial autopsy including physical examination does.

Reference: NVDRS 4.5.8 Autopsy performed

6.1a) Why was an autopsy not performed?

Variable: autopsy\_reason

Question type: Check all that apply.

Definition: Identifies reasons an autopsy may not have been done. This information will assist with making recommendations related to autopsies.

Guidance: None

Reference: None

6.1b) Specify "Other"

Variable: autopsy\_reason\_othr

Question type: Text entry

Definition: Specifies other reason autopsy was not performed.

Guidance: None

Reference: None

6.2) What specimens were collected for toxicology testing?

Variable: specimen\_collected

Question type: Check all that apply.

Definition: Indicates which toxicology specimens were collected during the death investigation.

Guidance: None

Reference: None

6.3) Was toxicology testing performed?

Variable: toxicology

Question type: Select only one.

Definition: Indicates whether toxicology testing was performed and whether it was done at an accredited/certified laboratory.

Guidance: None

Reference: None

6.3a) Why was toxicology testing not performed?

Variable: toxicology\_reason

Question type: Check all that apply.

Definition: Identifies reasons toxicology testing may not have been done. This will assist with making recommendations related to toxicology testing.

Guidance: None

Reference: None

6.3b) Specify "Other"

Variable: toxicology\_reason\_othr

Question type: Text entry

Definition: Specifies other reason toxicology testing was not performed.

Guidance: None

Reference: None

6.4) What kind of toxicology testing was done?

Variable: toxicology\_tested

Question type: Select only one.

Definition: Indicates which substances were tested.

Guidance:

- Comprehensive: Refers to general preliminary screening and provides a complete confirmation of any and all substances detected.
- Targeted: Refers to a subset category or type of drugs that were tested.

Reference: None

6.4a) What kind of targeted toxicology testing was done?

Variable: toxicology\_targeted

Question type: Check all that apply.

Definition: Indicates which substances were tested.

Guidance: None

Reference: None

6.4b) Specify "Other"

Variable: toxicology\_targeted\_othr

Question type: Text entry

Definition: Specifies other kind of targeted toxicology done.

Guidance: None

Reference: None

6.4c) What substances were reported present on the toxicology report?

Variable: toxicology\_substances

Question type: Check all that apply.

Definition: Indicates which substances tested positive or present in the decedent.

Guidance: Possible substances associated with each substance listed:

- 4-ANPP: 4-anilino-N-phenethyl-4-piperidine. Also known as despropionylfentanyl. This is a precursor to fentanyl and a metabolite of fentanyl.
- Antidepressants: Examples include fluoxetine, bupropion, citalopram paroxetine, and sertraline.
- Antihistamines: Examples include chlorpheniramine, chlorcyclizine, diphenhydramine, hydroxyzine, and scopolamine.

- Antipsychotics: Examples include aripiprazole, haloperidol, loxapine, lurasidone, olanzapine, and quetiapine.
- Benzodiazepines: Examples include alprazolam, chlordiazepoxide, clonazepam, diazepam, lorazepam, midazolam, nitrazepam, nordiazepam, oxazepam, prazepam, temazepam, and triazolam.
- Cocaine: Includes cocaine metabolites: cocaethylene, benzoylecgonine, and ecgonine methyl ester.
- Fentanyl analogs: Examples include acetyl fentanyl, furanyl fentanyl, cyclopropyl fentanyl, valeryl fentanyl, carfentanil, remifentanil, and sufentanil.
- Inhalants: Examples include 1,1 difluoroethane, spray paints, paint thinners, and anesthetic gases.
- Muscle relaxers/antispasmodics: Examples include carisoprodol, meprobamate, cyclobenzaprine, metaxalone, tizanidine, and ropinirole.
- Nonsteroid anti-inflammatory: Examples include salicylates, ibuprofen, naproxen.
- Opioids: Examples include 6-Monoacetylmorphine (6-MAM), morphine, hydrocodone, oxycodone, and codeine.
- Other synthetic benzodiazepines: Examples include bromazepam, clonazepam, clobazam, and etizolam.
- Other synthetic opioids: Examples include tramadol, o-desmethyltramadol, U-47700, and AH-7921.
- Synthetic cathinones: Examples include MDPV, N-ethylcathinone.
- Tricyclic antidepressants: Examples include amitriptyline, desipramine, nortriptyline, and trazodone.
- Other volatiles: Examples include methanol, isopropanol, and acetone. Alcohol (ethanol) is listed as a separate category.

Reference: None

## 7. Interventions Following Overdose

7.1) Were there known witnesses of the drug use that resulted in the fatal overdose?

Variable: witness

Question type: Select only one.

Definition: Indicates whether a witness (a person aged 11 years or older) observed the decedent use the substance(s)/drug(s) that resulted in his/her overdose.

Guidance:

“Yes” should be selected for the following:

- A witness is physically with the decedent when he/she uses the drugs that cause the overdose.

- A person sees the decedent use the drugs that cause the overdose but leaves the decedent before symptoms of the overdose present.

“No” should be selected in following circumstances:

- A person joins the decedent immediately after the decedent used the drugs that caused the overdose and reports seeing the symptoms of the overdose as they present.
- A person is found days after the fatal overdose occurred, and evidence suggests that no one was at the scene of the overdose.
- A person knows that the decedent went to his or her room or the bathroom to use drugs but does not actually observe the decedent using drugs.
- The decedent contacts a friend just before he/she uses the drugs that resulted in the overdose. (emails, messages, texts, calls).
- Two decedents are both found deceased in the same location, absent any evidence that they observed each other’s drug use.
- A child younger than 11 years witnessed the drug use.
- Limited information prevents entering yes, it is unknown.

Reference: SUDORS 4.4.b Drug use witnessed

## 7.2) Number of known bystanders present at the scene of the overdose

Variable: bystander

Question type: Select only one.

Definition: Bystander is a person, aged 11 years or older, who was physically nearby either during or shortly preceding an opioid overdose, who potentially had an opportunity to intervene and respond to the overdose.

Guidance: Understanding factors that prevented or slowed the response of bystanders to an overdose is critical to inform efforts to improve emergency responses to future opioid overdoses. The rapid progression of some fentanyl and heroin overdoses highlights the growing urgency of quickly responding to opioid overdoses. Since a bystander needs to be an individual with an opportunity to intervene, a minimum age cutoff of 11 years old is used. Below are some examples of situations that should be coded as bystander present or no bystander present. If there is not enough information to indicate whether a bystander was present or not, this variable can be coded as “5 Unknown if bystander present”; however, abstractors also can interpret what reflects the best possible evidence. For example, if it seems that the decedent overdosed in isolation, but the report does not specifically state that no bystander was present, it might make the most sense to code as “1 No bystanders present.”

**Bystander** should be selected for the following examples:

- A person was at the location where the overdose occurred at the time of the overdose (prior to the onset of signs/symptoms) but may have been spatially separated from the

decedent. For instance, the decedent's family may have been in another room in the house when the decedent overdosed in his/her room or a bathroom. This would include a person asleep in the same room or another room of the house.

- A person observed the decedent during her overdose but did not see the decedent use drugs. For instance, a roommate noticed that the decedent had fallen asleep and was loudly snoring on the couch but did not know the decedent had used drugs and/or did not recognize that the decedent had overdosed.
- A person reported that the decedent was intoxicated or high and left the decedent before symptoms of the overdose manifested.
- A person physically observed the decedent using the drugs that resulted in the overdose.

**Not considered bystander** includes the following examples:

- The decedent electronically communicated (e.g., through emails, texts, calls) with a friend that he or she was about to use drugs.
- The decedent overdosed in a public place such as an alley but could not be seen by people.
- An individual meets all criteria for a bystander but is younger than 11 years old. In this case, it should be coded as "No bystander present."
- A person discovers the decedent already unconscious (e.g., a family member returns to the home and finds the decedent unresponsive but was not nearby when the overdose signs/symptoms began).
- A roommate finds the decedent in a state of decomposition in the decedent's bedroom and the roommate has been in and out of the house during the past few days
- Limited information prevents entering yes, it is unknown.

**Unknown** for cases in which you know there were bystanders, but the number is unknown.

Reference: SUDORS 4.4.a Bystander present (modifications related to number of responses, to align with the rest of the document's structure).

7.2a) Bystander(s) present: Type of bystander.

Variable: bystander\_type

Question type: Check all that apply.

Definition: Indicates the type of bystander(s) present.

Guidance:

- Friend: The bystander present at the time of overdose was a friend or acquaintance of the decedent. If the decedent knew the bystander even casually, the box associated with this variable should be checked.

- Intimate partner: The bystander present at the time of overdose was a wife, husband, girlfriend, or boyfriend of the decedent. This category also includes ex-girlfriends, ex-boyfriends, ex-wives, and ex-husbands.
- Medical professional: The bystander present at the time of overdose was a medical professional.
- Other family: The bystander present at the time of overdose was a family member but not the decedent's intimate partner. For instance, the person could be the decedent's mother, father, brother, sister, aunt, uncle, cousin, son, daughter, or grandparent.
- Person using drugs: The bystander present at the time of overdose was a person who was using substance(s) with the decedent in the time leading up to the overdose.
- Roommate: The bystander present at the time of overdose lived with the decedent and was not an intimate partner or other family member.
- Stranger: The bystander present at the time of overdose was not someone known to the decedent.
- Other: The bystander present at the time of the overdose had another relationship with the decedent that is not captured by other responses. For instance, the person may have been a co-worker. If the box associated with this item is checked, please briefly describe the relationship in the text located underneath this variable.
- Unknown: Check this box if the relationship is unknown.

Reference: None

#### 7.2b) Specify "Other"

Variable: bystander\_type\_othr

Question type: Text entry

Definition: Specifies other type of bystander.

Guidance: None

Reference: None

#### 7.2c) Bystander response other than naloxone administration.

Variable: bystander\_response

Question type: Check all that apply.

Definition: Indicates what the bystander did to intervene to prevent the overdose death.

Guidance:

- No response or call or call 9-1-1 after a significant delay: Check this variable if there is no evidence of any response by a bystander or layperson or a significant delayed response in calling 9-1-1.
- Call 9-1-1 immediately: Check this variable if there is evidence that a bystander or layperson called 9-1-1 for the decedent immediately at the onset of overdose symptoms. A bystander or other layperson called 9-1-1 after the decedent overdosed to obtain emergency medical services for the decedent.
- Cardiopulmonary resuscitation (CPR): Check this variable if there is evidence that a bystander or layperson performed CPR on the decedent after the onset of overdose symptoms. CPR is an emergency procedure that includes chest compressions and possibly ventilation (either mouth-to-mouth breathing or with the use of equipment) to maintain brain function until further treatment can be given and/or spontaneous circulation returns.
- Rescue breathing: Check this variable if there is evidence that a bystander or layperson performed rescue breathing on the decedent after the onset of overdose symptoms. Rescue breathing is an emergency procedure used to revive a person who has stopped breathing by forcing air into the lungs at regular intervals, either by exhaling into the decedent's mouth or nose or via a mask over the decedent's mouth.
- Sternal rub: Check this variable if there is evidence that a bystander or layperson performed a sternal rub on the decedent after the onset of overdose symptoms. One way to attempt to rouse an unconscious person is to use hard pressure to rub the sternum (middle of the chest/breastbone) with the knuckles. This is not an effective way to reverse an overdose but is often used as a way to wake a person who has nodded off because of the effects of opioids.
- Stimulation: Check this variable if there is evidence that a bystander or layperson attempted stimulation on the decedent after the onset of overdose symptoms. Similar to a sternal rub, external stimulation (e.g., rubbing the upper lip area, shaking the person, yelling at the person, or splashing cold water or ice on the person) is often done with the intent to wake a person with symptoms of overdose. This is not an effective way to reverse an overdose but is often used to wake a person who has nodded off because of the effects of opioids.
- Other: Check this variable if there is evidence that a bystander or layperson made some other response not covered by other responses for the decedent after the onset of overdose symptoms.

Reference: SUDORS 4.4.d Bystander Response Other than Naloxone Administration (modified No response option)

#### 7.2d) Specify "Other"

Variable: bystander\_response\_othr

Question type: Text entry

Definition: Specifies other bystander response other than naloxone administration.

Guidance: None

Reference: None

7.2e) What are the reasons for no response or significant delay in calling 9-1-1?

Variable: no\_response\_reason

Question type: Check all that apply.

Definition: Indicates reasons the bystander did not respond or significantly delayed calling 9-1-1.

Guidance: Complete this variable if a bystander was present and did not respond to the overdose or call 9-1-1 at the onset of overdose symptoms.

- **Abnormalities not recognized:** Failure to recognize symptoms of an overdose can inhibit the ability of a bystander to respond to an overdose. Check this variable if there is evidence that a bystander was present but did not provide any response to the overdose because the signs/symptoms of the overdose were not recognized by the bystander. Bystander(s) present during or shortly before onset of overdose did not recognize any overdose symptoms exhibited by the decedent, so they did not know that they needed to provide a response to the overdose. Common symptoms of an opioid overdose include pinpoint, contracted pupils; loss of consciousness; slow, shallow, or erratic breathing; bluish skin, especially around the lips; limp body/muscles; choking or snore-like sounds; and slow, erratic, or nonexistent heartbeat. Often a person who has overdosed is thought to be asleep when the symptoms are not recognized.
- **Abnormalities recognized, but not as overdose:** Check this variable if there is evidence that a bystander was present but did not provide any response to the overdose because signs/symptoms of the overdose were not recognized by the bystander to indicate an overdose. Some abnormalities may not be recognized as signs/symptoms of opioid overdose, which would hinder the ability of a bystander to provide a response to an overdose. For example, someone who has become unconscious might be thought to be sleeping, or someone with agonal breathing might be thought to be snoring.
- **Bystander using substances or impaired:** Check this variable if there is evidence that a bystander was present but did not provide any response to the overdose because he or she was also using substances or drinking alcohol. If a bystander is also using substances or drinking alcohol, it may hinder his or her ability to recognize signs/symptoms of an overdose or to respond, even if the overdose is recognized. A bystander who is also using may additionally hesitate to respond (e.g., call 9-1-1) because of a fear of consequences.
- **Bystander spatially separated (i.e., in a different room):** Check the box associated with this variable if there is evidence that a bystander was present but did not provide any response to the overdose because the bystander was spatially separated from the decedent at the time of overdose. The definition of a bystander allows for inclusion of

individuals who were nearby during or shortly preceding an overdose even if they were not directly with the decedent at the onset of overdose. This would include individuals who were in a different room of the same house, or otherwise spatially separated from the person who overdosed, therefore hindering the ability to recognize that an overdose was occurring. It is likely that this variable will be endorsed along with “Unaware that decedent was using” in many cases.

- Bystander unaware that the decedent was using: Check this variable if there is evidence that a bystander was present but did not provide any response to the overdose because the bystander did not know the decedent was using substances. If bystanders do not know that someone is using substances, they might be less likely to notice signs/symptoms of overdose than if they were aware of the substance use, and they might be less vigilant in checking on the person using substances. It is likely that this variable will be endorsed along with others in this section, such as “Spatially separated” or “Did not recognize any abnormalities.”
- Public space and strangers did not intervene: Check this variable if there is evidence that a bystander was present but did not provide any response to the overdose because the overdose occurred in a public space with strangers as the only bystanders.
- Other: Check this variable if there is evidence that a bystander was present but did not provide any response to the overdose for some reason other than those covered in this section.
- Unknown: Do not have any known reason for delay or no response.

Reference: SUDORS Subsection 4.4.I Reason(s) for Bystander No Response

#### 7.2f) Specify “Other”

Variable: no\_response\_reason\_othr

Question type: Text entry

Definition: Specified other reason for no response or significant delay in calling 9-1-1.

Reference: None

#### 7.3) Was the emergency medical dispatching (EMD) protocol performed?

Variable: emd\_performed

Definition: Indicates whether the Emergency Medical Dispatching (EMD) protocol was performed. This information will understand the use and impact scripted dispatching provides as it relates to resuscitation efforts and the willingness of a bystander to act in a given emergency. Scripts on how to provide naloxone and how to provide CPR are included in medical dispatch programs. The dispatcher and the caller are the first people to intervene and provide care on an overdose incident. Understanding the willingness to accept direction from a dispatcher after calling 9-1-1 could provide insight on how to improve bystander intervention.

Guidance:

- No: The dispatch center that received the call for emergency services did NOT process the call using a pre-existing evidence-based response system
- Yes, with pre-arrival instructions: The dispatch center that received the call for emergency services processed the call using a pre-existing evidence-based system and intervention instructions WERE provided to caller.
- Yes, without pre-arrival instructions: The dispatch center that received the call for emergency services processed the call using a pre-existing evidence-based system and NO intervention instructions were provided to the caller.
- Yes, unknown whether pre-arrival instructions were given: The dispatch center that received the call for emergency services processed the call using a pre-existing evidence-based system and it is UNKOWN whether intervention instructions were provided to the caller.
- Unknown: It is unknown whether emergency medical dispatching was performed.

Reference: None

7.4) Was EMS at the scene?

Variable: ems\_present

Question type: Select only one.

Definition: Indicates whether emergency medical services were present at the scene of the injury incident.

Guidance: EMS status describes the involvement of emergency medical services in violent injury cases. This may assist in planning and evaluating EMS services and in capturing costs associated with violence. Code "EMSPresent" only to indicate the presence of medical services at the scene, not to indicate whether any medical services were delivered. If the decedent was transported from the scene via ambulance, this variable should be coded "yes."

Reference: NVDRS 4.3.6 EMS at scene

7.4a) Presence of a pulse when EMS arrived?

Variable: pulse

Question type: Select only one.

Definition: Indicates whether the decedent had a measurable pulse at the time EMS, law enforcement, fire, or other first responders arrived at the scene of the overdose, or, if the decedent was brought to the ED by laypersons, the decedent had a pulse upon arrival at the ED.

Guidance: The status of someone who has overdosed at the time of first-responder arrival will affect the ability of first responders to reverse the overdose and prevent death. If there is mention that a person is clearly deceased at first-responder arrival, it is more likely that no lifesaving measures will have been undertaken (beyond possibly transporting to the ED, if first responders are unable to declare death in the field). If, however, the decedent still had a pulse when first responders arrived, there is a higher likelihood that they administered some care/treatment to reverse the overdose. Evidence of presence of a pulse at first-responder arrival will provide information about factors such as whether bystanders were present (to call 9-1-1), whether any first-responder lifesaving interventions were undertaken, and rapidity of onset of overdose symptoms. Check the box associated with this variable if there is evidence that the decedent had a pulse (including instances in which a pulse is noted as weak or abnormal) when first responders arrived.

Reference: SUDORS 4.4.j Presence of pulse on first-responder arrival (modified responses so numbering matched the rest of the data instrument).

#### 7.4b) EMS intervention other than naloxone.

Variable: `ems_resposne`

Question type: Check all that apply.

Definition: Indicates what intervention(s) were done by EMS on the scene.

Guidance:

- CPR: Check this variable if there is evidence that a first responder performed CPR on the decedent after the onset of overdose symptoms. Cardiopulmonary resuscitation (CPR) is an emergency procedure that includes chest compressions and possibly ventilation (either mouth-to-mouth breathing or with the use of equipment) to maintain brain function until further treatment can be given and/or spontaneous circulation returns.
- Epinephrine administration: Check this variable if there is evidence that first responders administered epinephrine to the decedent. Epinephrine, also called adrenaline, is a medication used in emergencies to treat allergic reactions. It can help improve breathing and stimulate the heart rate. Epinephrine is also used in certain situations to treat cardiac arrest, so it can be administered to someone who has overdosed.
- Provided oxygen: Check this variable if there is evidence that first responders provided supplemental oxygen to the decedent. If a person has trouble breathing or trouble taking in oxygen while breathing, supplemental oxygen might be provided. Oxygen is usually provided through a face mask or nasal prongs. If someone has overdosed, there might be continued trouble with sufficient breathing even after he or she is able to breathe unaided.
- Rescue breathing: Check this variable if there is evidence that a first responder performed rescue breathing on the decedent after the onset of overdose symptoms. Rescue breathing is an emergency procedure used to revive a person who has stopped

breathing by forcing air into the lungs at regular intervals, either by exhaling into the decedent's mouth or nose or into a mask over the decedent's mouth.

- Transport to ED: Check the box associated with this variable if there is evidence that first responders transported the decedent to the ED. This can include instances in which the decedent was transported for further care or for a declaration of death. If a person who has overdosed has been revived in the field or has enough signs of life, he or she will likely be transported to the ED for further treatment. In some instances, if a person has died of an overdose before reaching the ED, but first responders cannot declare death in the field, the person might be transported to the ED to enable a health care provider to declare death.
- Other: Check the box associated with this variable if there is evidence that a first responder made some other response not covered in this question for the decedent after the onset of overdose symptoms. First-responder interventions are not limited to the response options provided. Use this variable if there is evidence indicating that some other response was made and include a description of the response in the text box.

Reference: Subsection 4.4.K First-responder intervention(s) other than naloxone administration

#### 7.4c) Specify "Other"

Variable: `ems_response_othr`

Question type: Text entry

Definition: Specifies other EMS response other than naloxone administration.

Reference: None

#### 7.5) Was it known that naloxone was administered?

Variable: `naloxone`

Question type: Select only one.

Definition: Indicates whether the decedent was administered naloxone in response to his or her fatal opioid overdose. Naloxone is a drug that reverses the effects of an opioid overdose. Naloxone can be administered nasally or injected. Narcan™ is a trademarked name for drugs containing naloxone that are used to reverse opioid overdoses.

Guidance:

- Yes: To check response, two criteria must be met:
  - The decedent was administered naloxone for his or her fatal opioid overdose by any of the following people: a layperson; EMS responders; law enforcement

officers; firefighters; or health care workers in an emergency room, hospital, or critical care center.

- There must be evidence that the naloxone was administered—evidence that naloxone was found at the scene (even used naloxone packaging) is insufficient unless there is also evidence that it was administered to the decedent. If toxicology tests on the decedent detect naloxone, check the box associated with this variable, unless buprenorphine is also detected, since this could indicate use of Suboxone, which is a combination of buprenorphine and naloxone.
- No: Check this response if there is evidence that naloxone was not administered or if it is unknown whether it was administered.

Reference: SUDORS Subsection 4.4.e and 4.4.f Naloxone Administered or Not (modified by making known or documented)

### 7.5a) Who administered the naloxone?

Variable: naloxone\_who

Question type: Check all that apply.

Definition: Indicates the type(s) of people who administered naloxone to the decedent in response to the fatal opioid overdose and how many naloxone dosages were administered. Must identify at least one individual or group who administered naloxone to the decedent by checking the box associated with the individual or group. Multiple groups can be checked because a decedent may have received naloxone from multiple groups.

Guidance:

- EMS/Fire: Check this variable if EMS staff members or firefighters administered naloxone to the decedent. EMS staff members (e.g., ambulance EMTs) or firefighters administered naloxone to the decedent. This category includes all EMS personnel regardless of certification level.
- Friend: Check this variable if the layperson who administered naloxone to the decedent was the decedent's friend. The person who administered the naloxone was a friend or acquaintance of the decedent. If the decedent knew the bystander even casually, the box associated with this variable should be checked.
- Hospital (ED/inpatient): Check this variable if hospital staff members, either in-patient or in the ED, administered naloxone to the decedent. The decedent was administered naloxone for his or her overdose in the emergency department or inpatient hospital setting. Naloxone administered in critical care centers should also be coded in this category.
- Intimate partner: Check this variable if the layperson who administered naloxone to the decedent was the decedent's intimate partner. The person who administered naloxone was a wife, husband, girlfriend, or boyfriend of the decedent. This category also includes ex-girlfriends, ex-boyfriends, ex-wives, and ex-husbands.

- Law enforcement: Check this variable if a law enforcement officer administered naloxone to the decedent. A law enforcement officer administered naloxone. Law enforcement includes local, state, tribal, and federal agencies, as well as private security.
- Other family: Check this variable if the layperson who administered naloxone to the decedent was a decedent's family member (other than an intimate partner). The person who administered the naloxone was a family member, but not the decedent's intimate partner. For instance, the person could be the decedent's mother, father, brother, sister, aunt, uncle, cousin, son, daughter, or grandparent.
- Person using drugs: Check this variable if the layperson who administered naloxone to the decedent was someone who was also using substances or alcohol at the time of the overdose. The person who administered naloxone was a person who was using drugs with the decedent at the time of the overdose.
- Roommate: Check this variable if the layperson who administered naloxone to the decedent was the decedent's roommate. The person who administered the naloxone lived with the decedent and was not an intimate partner or other family member.
- Stranger: Check the box associated with this variable if the layperson who administered naloxone to the decedent was a stranger to the decedent. The decedent did not know the person who administered the naloxone. Check the box associated with this variable only when the bystander was not using drugs with the decedent at the time of the overdose, an intimate partner, a friend (or acquaintance), another family member, a roommate, or another lay person.
- Other: Check this variable if someone other than those listed in responses administered naloxone to the decedent. For instance, if the decedent overdosed at a syringe exchange program and received naloxone from trained health professionals at the syringe exchange program, this box should be checked. If this box is checked, please provide details in the narrative about who administered the naloxone.

Reference: SUDORS 4.4.f Naloxone administered—who administered? (modified number to align with the rest of the data instruments numbering)

#### 7.5b) Specify "Other"

Variable: naloxone\_who\_othr

Question type: Text entry

Definition: Specifies other individual who administered naloxone.

Guidance: None

Reference: None

#### 7.5c) Total number of naloxone dosages known to be administered by first responders and health care professionals

Variable: naloxone\_number\_hcp

Question type: Text (integer)

Definition: Indicates the total number of naloxone dosages administered by first responders/health care providers such as law enforcement, EMS, or emergency department physicians.

Guidance: Range 1–120.

Please use the following guidance when calculating dosage:

- The amount of naloxone delivered to a person per dose varies across naloxone products. This variable does not capture the total amount of naloxone the person receives (e.g., total milligrams of naloxone), but instead the total number of doses he or she receives. For instance, if noted that EMS administered nasal naloxone twice to the patient, “2” should be entered for number of dosages. Of note: Nasal naloxone is delivered as a divided dose, with half of each dose going into each nostril; this is considered one dose but can be mistaken as two doses. If evidence is available that one dose was given, with half in each nostril, “1” should be entered for the number of dosages. Knowing the number of doses is important to ensure that sufficient dosages are distributed to first responders.
- Some nasal naloxone devices require administering half of the dose of naloxone in each nostril. If the person administering the nasal dose uses only a half dose (i.e., administers naloxone only in one nostril), the abstractor should round up and count this as one dose—enter “1” in the box.
- If the patient received the naloxone intravenously, please count this as a single dose.

Reference: 4.4.h Total number of naloxone dosages administered by first responders/health care (modified to match our response numbers)

7.5d Total number of naloxone dosages known to be administered by laypersons

Variable: naloxone\_number\_lay

Question type: Text (integer)

Definition: Indicates the total number of naloxone dosages known administered by bystanders such as family, friends, roommate, strangers, or people who were using drugs with the decedent.

Guidance: Range 1–120.

Please use the following guidance when calculating dosage:

The amount of naloxone delivered to a person per dose varies across naloxone products. This variable does not capture the total amount of naloxone the person receives (e.g., total milligrams of naloxone), but instead the total number of doses he or she receives. For instance, if it is noted that a family member administered nasal naloxone twice to the decedent and a

roommate administered naloxone once to the decedent through an auto injector, “3” should be entered for number of dosages. Of note: Nasal naloxone is delivered as a divided dose, with half of each dose going into each nostril; this is considered one dose but can be mistaken as two doses. If evidence is available that one dose was given, with half in each nostril, “1” should be entered for the number of dosages. Knowing the number of doses is important to ensure that sufficient dosages are distributed to first responders.

If details about a nasally administered dose are unavailable or unclear in the reports, enter “999” for unknown.

Some nasal naloxone devices require administering half of the dose of naloxone in each nostril. If the person administering the nasal dose uses only a half dose (i.e., only administers naloxone in one nostril), the abstractor should round up and count this as one dose—enter “1” in the box.

If the patient received the naloxone intravenously, please count this as a single dose.

Reference: 4.4.i Total number of naloxone dosages administered by layperson(s). (Modified to match our response numbers.)

7.5e) Why was naloxone not administered?

Variable: naloxone\_why\_not

Question type: Text entry

Definition: Indicates known reasons naloxone was not administered.

Guidance: None

Reference: None

7.5f) Known issues administering naloxone?

Variable: naloxone\_administration

Question type: Text entry

Definition: Describes any issues or barriers in the administration of the naloxone.

Guidance:

- Describe any barriers or issues experienced in administering naloxone.
- None: Enter “none” if there are not any known barriers or issues in administration of naloxone.
- Unknown: Enter “unknown” if there were barriers but it is unclear what or why there were barriers.

Reference: None

## 8. Recent Life Stressors

8.1) In the 14 days prior to death, did the decedent have any of these known housing or financial stressors?

Variable: financial\_stressors

Question type: Check all that apply

Definition: Indicates any financial or housing-related known life stressors in the 14 days prior to death.

Guidance: Benefits include Supplemental Security Income (SSI), Children’s Health Insurance Program (CHIP), housing assistance, energy assistance, unemployment insurance, Supplemental Nutritional Assistance Programs (SNAP or “food snaps”), Temporary Assistance for Needy Families (TANF or “welfare”), etc.

Reference: NVDRS Crisis-related variables (modified)

8.2) In the 14 days prior to death, did the decedent have any of these known life stressors?

Variable: life\_stressors

Question type: Check all that apply.

Definition: Indicates any known life stressors in the 14 days prior to death.

Guidance:

- Child, new or loss: Adopted a child, experienced a loss of adoption, son or daughter died, learned about pregnancy, or birth of a child
- Divorce or significant relationship problems: Decedent filed for divorce, received divorce papers, experienced an intimate relationship breakup, or experienced a significant relationship problem or disagreement with family or friend
- Infidelity: Decedent discovered partner’s infidelity; decedent’s partner discovered decedent’s infidelity

Reference: None

## 9. Health Care Access

9.1) In the 12 months prior to death, did the decedent have known health care visits (other than behavioral health/mental health or substance use disorder treatment)?

Variable: health\_care\_use

Question type: Check all that apply.

Definition: Indicates whether there is known access to health care, other than mental health or substance use disorder treatment, in the year prior to death, other than the fatal overdose event.

Guidance: Excludes mental health and substance use disorder treatment. This information is gathered in Module 11 Mental Health History and Module 12 Substance Use History.

Reference: None

9.2) In the 12 months prior to death, how many times did the decedent have a known emergency visit?

Variable: ed\_number

Question type: Text entry (integer)

Definition: Indicates the total number of known emergency response visits in the 12 months prior to the death.

Guidance: Input number of known visits. Range 1–100.

Reference: None

9.2a) Date of most recent known emergency department visit

Variable: ed\_recent

Question type: Text entry

Definition: Indicates the date of the most recent known emergency department visit.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

Reference: None

9.2b) If exact date is not known, enter the approximate date of most recent known emergency department visit

Variable: ed\_recent\_app

Question type: Text entry

Definition: Approximate date of most recent known emergency department visit.

Guidance: Enter the approximate date (e.g., June 2020).

Reference: None

9.2c) What was the primary reason for the most recent emergency department visit?

Variable: ed\_reason

Question type: Select only one.

Definition: Indicates the primary reason for the most recent emergency department visit.

Guidance: None

Reference: None

9.2d) Specify "Other"

Variable: ed\_reason\_othr

Question type: Text entry

Definition: Specifies other primary reason for most recent emergency department visit.

Guidance: None

Reference: None

9.3) In the 12 months prior to death, how many times did the decedent have known encounters with EMS, including community paramedics?

Variable: ems\_number

Question type: Text entry (integer)

Definition: Indicates the total number of known EMS encounters in the 12 months prior to the death.

Guidance: Input number of known EMS encounters. Range 1–100.

Reference: None

9.3a) Date of most recent known EMS encounter

Variable: ems\_recent

Question type: Text entry

Definition: Indicates the date of the most recent known EMS encounter.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

Reference: None

9.3b) If exact date is not known, enter the approximate date of most recent known EMS encounter

Variable: `ems_recent_app`

Question type: Text entry

Definition: Approximate date of the most recent known EMD encounter.

Guidance: Enter the approximate date (e.g., June 2020)

Reference: None

9.3c) What was the primary reason for the most recent EMS encounter?

Variable: `ems_reason`

Question type: Select only one.

Definition: Indicates the primary reason for the most recent EMS encounter.

Guidance: None

Reference: None

9.3d) Specify “Other”

Variable: `ems_reason_othr`

Question type: Text entry

Definition: Specifies other primary reason for most recent EMS encounter.

Guidance: None

Reference: None

9.4) In the past 12 months prior to death, how many times did the decedent have a known inpatient hospitalization?

Variable: `inpatient_number`

Question type: Text entry (integer)

Definition: Indicates the total number of known inpatient hospitalizations in the 12 months prior to the death.

Guidance: Input number of known hospitalizations. Range 1–100.

Reference: None

9.4a) Date of most recent known inpatient hospitalization

Variable: inpatient\_recent

Question type: Text entry

Definition: Indicates the date of the most recent known inpatient hospitalization discharge date.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

Reference: None

9.4b) If exact date is not known, enter the approximate date of most recent known inpatient hospitalization

Variable: inpatient\_recent\_app

Question type: Text entry

Definition: Approximate date of most recent known inpatient hospitalization.

Guidance: Enter the approximate date (e.g., June 2020).

Reference: None

9.4c) What was the primary reason for the most recent inpatient hospitalization?

Variable: inpatient\_reason

Question type: Select only one.

Definition: Indicates the primary reason for the most recent inpatient hospitalization.

Reference: None

9.4d) Specify “Other”

Variable: inpatient\_reason\_othr

Definition: Specifies other primary reasons for the most recent inpatient hospitalization.

Guidance: None

Reference: None

9.5) Date of most recent known visit with a primary care provider

Variable: primary\_care\_recent

Question type: Text entry

Definition: Indicates the date of the most recent known contact with primary care provider.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

Reference: None

9.5a) If exact date is not known, enter the approximate date of most recent known visit with a primary care provider

Variable: primary\_care\_recent\_app

Question type: Text entry

Definition: Approximate date of most recent known contact with a primary care provider.

Guidance: Enter the approximate date (e.g., June 2020).

Reference: None

9.5b) What was the primary reason for the most recent primary care visit?

Variable: primary\_care\_reason

Question type: Select only one.

Definition: Indicates the primary reason for the most recent primary care visit.

Guidance: None

Reference: None

9.5c) Specify “Other”

Variable: primary\_care\_reason\_othr

Question type: Text entry

Definition: Specifies other primary reason for the most recent primary care visit.

Guidance: None

Reference: None

9.6) In the 12 months prior to the death, what harm-reduction services was the decedent known to access?

Variable: harm\_reduction

Question type: Check all that apply.

Definition: Indicates known harm-reduction services the decedent accessed in the 12 months prior to death.

Guidance: None

Reference: None

9.6a) Specify "Other"

Variable: harm\_reduction\_othr

Question type: Text entry

Definition: Specifies other known harm-reduction services the decedent accessed in the 12 months prior to death.

Guidance: None

Reference: None

9.7) At the time of death, what was the decedent's insurance status?

Variable: insurance\_status

Question type: Select only one.

Definition: Indicates the insurance status/coverage at the time of death.

Guidance: None

Reference: None

9.8) In the 12 months prior to death, was there a known change in insurance coverage?

Variable: insurance\_change

Question type: Select only one.

Definition: Indicates known insurance coverage change in the 12 months prior to death.

Guidance: None

Reference: None

## 10. Health History

10.1) Did the decedent have any known history of any of the following health conditions?

Variable: health\_history

Question type: Check all that apply.

Definition: Indicates whether the decedent has any known or documented history of various health conditions.

Guidance: None

Reference: None

10.1a) Specify "Other illness"

Variable: health\_history\_othr

Question type: Text entry

Definition: Specifies other illness for which decedent had a known history.

Guidance: None

Reference: None

10.2) At the time of death, was the decedent known to be under medical care or receiving treatment for the following health issues?

Variable: health\_treatment

Question type: Check all that apply.

Definition: Indicates which health conditions the decedent was under treatment for at the time of his or her fatal overdose.

Guidance: None

Reference: None

10.2a) Specify "Terminal diagnosis"

Variable: health\_terminal\_othr

Question type: Text entry

Definition: Specifies terminal diagnosis for which decedent was under treatment at the time of his or her fatal overdose.

Guidance: None

Reference: None

### 10.2b) Specify "Other illness"

Variable: health\_illness\_othr

Definition: Specifies other illness for which decedent was under treatment at the time of his or her fatal overdose.

Guidance: None

Reference: None

### 10.3) What type of pain was the decedent being treated for?

Variable: pain\_type

Question type: Select only one.

Definition: Indicates what type of pain the decedent was being treated for at the time of his or her fatal overdose.

Guidance: None

Reference: None

### 10.3a) Who was treating the decedent's pain?

Variable: pain\_provider

Question type: Check all that apply.

Definition: Indicates what type of health care provider was treating the decedent's pain.

Guidance: None

Reference: None

### 10.3b) Specify "Other"

Variable: pain\_provider\_othr

Question type: Text entry

Definition: Specifies other type of pain treatment provider.

Guidance: None

Reference: None

10.3c) Date of most recent known health care visit for pain

Variable: pain\_date

Question type: Text entry

Definition: Indicates the date of the decedent's most recent known health care visit for pain.

Guidance: You must enter "MM" and "DD" as two-digit numbers (e.g., "06" for June, not "6"). Enter 09-09-9999 if exact date is unknown.

Reference: None

10.3d) If exact date is not known, enter the approximate date of most recent known health care visit for pain

Variable: pain\_date\_app

Question type: Text entry

Definition: Approximate date of most recent known health care visit for pain.

Guidance: Enter the approximate date (e.g., June 2020)

Reference: None

10.4) In the 14 days prior to death, did the decedent have any of these known health stressors?

Variable: health\_stressors

Question type: Check all that apply.

Definition: Indicates any known health stressors in the 14 days prior to death.

Guidance:

- Pregnancy complications: terminated pregnancy, miscarriage, or other significant health status information about fetus or mother

Reference: None

## 11. Mental Health History

11.1) Did the decedent have a known history of a mental health problem/diagnosis (such as depression, anxiety, post-traumatic stress disorder [PTSD], etc., excluding substance use disorder treatment)?

Variable: mh\_history

Question type: Select only one.

Definition: Indicates whether the decedent had any known or documented history of a mental health problem or diagnosis.

Guidance:

- Excludes suicide attempt and ideation and substance use disorder treatment.
- Mental health conditions not diagnosed or treated, but identified by family members, social network, or other data providers, can count as mental health problems.
- Mental health problems include those disorders and syndromes listed in the Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-5) except for alcohol and other substance dependence (these are captured in separate variables).
- Examples of disorders qualifying as mental health problems include diagnoses such as major depression, schizophrenia, and generalized anxiety disorder, as well as neurodevelopmental disorders (such as intellectual disability, autism, attention-deficit /hyperactivity disorder), eating disorders, personality disorders, and organic mental disorders (such as Alzheimer’s and other dementias).
- Also indicate “yes” if it is mentioned in the source document that the decedent was being treated for a mental health problem, even if the nature of the problem is unclear (e.g., “was being treated for various psychiatric problems”).
- It is acceptable to endorse this variable based on past treatment of a mental health problem, unless it is specifically noted that the past problem has been resolved. However, do not code this circumstance based only on a positive toxicology test for psychiatric medications (such as antidepressants). There must also be some indication that the decedent was being treated for a mental health condition, such as a current prescription, the report by a family member, etc.

Reference: NVDRS 5.3.1 Current diagnosed mental health problem: CME/LE MentalHealthProblem (Guidance text)

11.2) In the 12 months prior to death, did the decedent have known visits with a provider to treat a mental health condition?

Variable: mh\_treatment\_hx

Question type: Select only one.

Definition: Indicates whether there was known access to mental health care to treat a mental health condition in the year prior to death.

Guidance: Mental health treatment may include primary care provider, emergency room, counselor/therapy, psychiatrist, etc. to treat mental health conditions.

- Also indicate “yes” if it is mentioned in the source document that the decedent was being treated for a mental health problem, even if the nature of the problem is unclear (e.g., “was being treated for various psychiatric problems”).
- It is acceptable to endorse this variable based on past treatment of a mental health problem, unless it is specifically noted that the past problem has been resolved. However, do not code this circumstance based only on a positive toxicology test for psychiatric medications (such as antidepressants). There must also be some indication that the decedent was being treated for a mental health condition, such as a current prescription, the report by a family member, etc.

Reference: NVDRS 5.3.1 Current diagnosed mental health problem: CME/LE MentalHealthProblem (Guidance text)

11.2a) At the time of death, was the decedent known to be under care or receiving treatment for a mental health condition?

Variable: mh\_treatment

Question type: Select only one.

Definition: Indicates whether the decedent was under treatment for a mental health condition at the time of his or her fatal overdose.

Guidance: Mental health treatment may include primary care provider, emergency room, counselor/therapy, psychiatrist, etc. to treat mental health conditions.

- Also indicate “yes” if it is mentioned in the source document that the decedent was being treated for a mental health problem, even if the nature of the problem is unclear (e.g., “was being treated for various psychiatric problems”).
- It is acceptable to endorse this variable based on past treatment of a mental health problem, unless it is specifically noted that the past problem has been resolved. However, do not code this circumstance based only on a positive toxicology test for psychiatric medications (such as antidepressants). There must also be some indication that the decedent was being treated for a mental health condition, such as a current prescription, the report of a family member, etc.

Reference: NVDRS 5.3.1 Current diagnosed mental health problem: CME/LE MentalHealthProblem (Guidance text)

11.2b) Date of most recent known contact with a provider to treat a mental health condition

Variable: mh\_recent

Question type: Text entry

Definition: Indicates the date of the most recent known contact with mental health treatment provider.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

Reference: None

11.2c) If exact date is not known, enter the approximate date of most recent known contact with a provider to treat a mental health condition

Variable: mh\_recent\_app

Question type: Text entry

Definition: Approximate date of most recent known contact with a provider to treat a mental health.

Guidance: None

Reference: None

11.3) Did the decedent have a known history of suicidal ideation/plans or attempts?

Variable: suicide\_history

Question type: Select only one.

Definition: Indicates whether the decedent was known to have a history of suicidal ideation, plans, or attempts.

Guidance: If the decedent was known to share suicidal ideation, plans, or attempt with family members or a social network as well as to seek treatment, both can allow for endorsement of this variable.

Reference: None

11.3a) In the 12 months prior to death, did the decedent have known treatment for suicidal ideation/plans or attempts?

Variable: suicide\_treatment

Question type: Select only one.

Definition: Indicates whether the decedent had a known history of treatment for suicidal ideation/plans or attempts.

Guidance: Mental health treatment may include primary care provider, emergency room, counselor/therapy, psychiatrist, etc. to treat mental health conditions.

Reference: None

11.3b) Date of most recent known contact with a provider to treat suicidal ideation/plans or attempts?

Variable: suicide\_treatment\_recent

Question type: Text entry

Definition: Indicates the date of the most recent known contact with provider to treat suicidal ideation/plans or attempts.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

Reference: None

11.3c) If exact date is not known, enter the approximate date of most recent known contact with a provider to treat suicidal ideation/plans or attempt

Variable: suicide\_treatment\_recent\_app

Definition: Approximate date of most recent known contact with a provider to treat suicidal ideation/plans or attempt.

Guidance: Enter the approximate date (e.g., June 2020).

Reference: None

11.4) At the time of the overdose incident, was it known that the decedent left a suicide note, a letter, a text, an email, and/or a voicemail?

Variable: suicide\_note

Question type: Select only one.

Definition: Indicates whether it was known that the decedent left a suicide note.

Guidance:

- A will or folder of financial papers near the decedent does not constitute a suicide note.
- If the record states the person left a “note,” infer that it was a suicide note in the absence of information indicating that the note had some other purpose.
- A suicide “note” can be any essentially durable message; it does not have to be on a piece of paper. Emails, text messages, voicemails, or writing on any object (such as a wall or table) all qualify.
- A text or electronic message sent immediately before the suicide occurred should be labeled a suicide note if there was no time between the sending/receipt of the message and the suicide.

Reference: NVDRS 5.7.5 Left a suicide note: CME/LE\_SuicideNote (Guidance)

11.5) In the 14 days prior to death, did the decedent have any of these known mental health-related events?

Variable: mh\_stressors

Question type: Check all that apply.

Definition: Indicates whether the decedent had any known mental health-related events 14 days prior to death.

Guidance: None

Reference: None

11.6) In the 12 months prior to death, was mental health treatment recommended by a health professional and/or identified as a need by the family, but the decedent did not receive care?

Variable: mh\_recommendation

Definition: Indicates whether the decedent did not receive mental health treatment recommended to him or her.

Guidance: None

Reference: None

11.6a) Were there known barriers to accessing mental health care?

Variable: mh\_barrier

Question type: Select only one.

Definition: Indicates whether there were known barriers to accessing mental health care.

Guidance: None

Reference: None

11.6b) What were the known barriers to accessing mental health care?

Variable: mh\_barrier\_type

Question type: Check all that apply.

Definition: Indicates the known barriers to accessing mental health care.

Guidance: None

Reference: None

11.6c) Specify “Other”

Variable: mh\_barrier\_type\_othr

Definition: Specifies other barrier to accessing mental health care.

Guidance: None

Reference: None

## 12. Substance Use History

12.1) Did the decedent have a known history of substance use disorder or diagnosis?

Variable: su\_history

Question type: Select only one.

Definition: Indicates whether the decedent had any known or documented history of a substance use disorder or diagnosis.

Guidance:

- Excludes suicide attempt and ideation and mental health condition treatment.
- Substance use disorders not diagnosed or treated, but identified by family members, social network, or other data providers, can count as mental health problems.
- Substance use disorder diagnosis.
- Substance use refers to all drugs (including alcohol) that are either nonprescription or being used in a manner inconsistent with safe prescribing practices.

Reference: None

12.1a) Known age at first use of substances

Variable: substance\_age

Question type: Text entry (integer)

Definition: Documents known age of decedent when he or she first started to use substances.

Guidance: Range 1–120. Leave blank if the age the decedent first used substances is unknown. Substance use refers to all drugs (including alcohol) that are either nonprescription or being used in a manner inconsistent with safe prescribing practices.

Reference: None

12.1b) What was the substance the decedent was first known to use?

Variable: substance\_first

Question type: Check all that apply.

Definition: Indicates the first known substance used.

Guidance: None

Reference: None

12.1c) Specify "Other"

Variable: substance\_first\_othr

Question type: Text entry

Definition: Specifies other substance decedent was first known to use.

Guidance: None

Reference: None

12.1d) What substances was the decedent known to have a history of using?

Variable: substance\_hx\_type

Question type: Check all that apply.

Definition: Indicates which substances the decedent was known to use.

Guidance: None

Reference: None

12.1e) Specify “Other”

Variable: substance\_hx\_type\_othr

Question type: Text entry

Definition: Specifies other substance decedent was known to use.

Guidance: None

Reference: None

12.1f) What were the decedent's known substances of choice?

Variable: substance\_choice

Question type: Check all that apply.

Definition: Indicates the decedent’s known substance of choice or primary substance used.

Guidance: None

Reference: None

12.2) What was the decedent’s known preferred method for the substance involved in the death?

Variable: prefer\_method

Question type: Check all that apply.

Definition: Indicates the decedent’s known preferred method for the substance involved in the overdose death.

Guidance: None

Reference: None

12.2a) Specify “Other”

Variable: prefer\_method\_othr

Question type: Text entry

Definition: Specifies the other known preferred method for the substance involved in the death.

Guidance: None

Reference: None

12.3) Over the decedent's life, number of known nonfatal drug overdoses

Variable: od\_number\_life

Question type: Text entry (integer)

Definition: Indicates the number of known nonfatal drug overdoses.

Guidance: Range 0–120. Enter “0” if there are no known nonfatal drug overdoses. A drug overdose, involving any substance including, but not limited to opioids, was reported. A drug overdose is defined as the decedent’s experiencing acute clinical symptoms such as difficulty breathing, unconsciousness/unresponsiveness, or irregular heartbeats related to the ingestion, inhalation, injection, or absorption of the drug in quantities greater than recommended. Opioid overdose can present as sedation (sleepiness), low blood pressure, slowed or no heart rate, and slowed or no breathing.

The following situations should be considered evidence of previous drug overdoses:

- A family or friend reporting that the decedent had previously overdosed but providing no information on the substance(s) involved in the overdose
- Previous overdoses related to any substance including but not limited to opioids, benzodiazepines, cocaine, or sedatives
- A drug overdose that required treatment in an emergency department, a critical care center, or other medical center
- An opioid overdose that was treated with naloxone (a drug to reverse opioid overdoses) by a layperson and the person experiencing the overdose did not seek medical treatment
- A drug overdose to which emergency medical services responded (e.g., after a 9-1-1 call), and the person refused to be transported to the hospital
- The following situations are not considered evidence of previous drug overdoses:
- The decedent was reported as previously passing out from or receiving medical care for alcohol intoxication.
- The decedent previously experienced adverse effects from substance use that were not acute, such as constipation or skin rashes.
- The decedent previously sought medical care to treat withdrawal symptoms or assist with detox.
- The decedent previously sought medical care for injection-related conditions such as abscesses, endocarditis, or fevers.

The following situation would require additional information to determine whether there was a previous overdose:

- The decedent was revived by naloxone and/or admitted to the ED/hospital and was released, seemingly recovered. The decedent was later found unresponsive in the overdose that led to death, with no evidence of additional drug use. Timeline, toxicology results, and additional information from the CME report should be used to determine whether it is more likely that the fatal overdose was the same as the overdose that led to naloxone revival or ED/hospital admission or whether subsequent substance use led to another overdose.

Reference: SUDORS 4.2.a Previous Drug Overdose (Guidance)

12.3a) Date of the most recent known nonfatal drug overdose

Variable: od\_recent\_date

Question type: Text entry

Definition: Indicates the date of the more recent known nonfatal drug overdose.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

This item also captures the period from the previous overdose to the time when the fatal drug overdose occurred.

- If the person experienced multiple overdoses, code the timing of the most recent overdose.

Reference: SUDORS 4.2.a Previous Drug Overdose (Guidance)

12.3b) If exact date is not known, enter the approximate date of the most recent known nonfatal drug overdose

Variable: od\_recent\_app

Question type: Text entry

Definition: Approximate date of the most recent known nonfatal drug overdose.

Guidance: None

Reference: None

12.4) In the 12 months prior to death, did the decedent have a known period of sobriety or abstinence from the drug involved in the fatal overdose?

Variable: sobriety

Question type: Select only one.

Definition: Indicates whether the decedent had a known period of sobriety or abstinence from the drug involved in the fatal overdose.

Guidance: The decedent had a history of misusing opioids or an opioid use disorder and had a period of not using opioids for at least one week.

Reference: SUDORS 4.2.b Recent Opioid Use Relapse (Definition for Guidance)

12.4a) What were the known reasons for the most recent known sobriety or abstinence?

Variable: sobriety\_reason

Question type: Check all that apply.

Definition: Indicates known reasons for the most recent known sobriety or abstinence.

Guidance: The decedent had a history of misusing opioids or an opioid use disorder and had a period of not using opioids for at least one week.

Reference: SUDORS 4.2.b Recent Opioid Use Relapse (Definition for Guidance)

12.4b) Specify "Other"

Variable: sobriety\_reason\_othr

Question type: Text entry

Definition: Specifies other reason for most recent known sobriety or abstinence.

Guidance: None

Reference: None

12.5) In the 12 months prior to death, did the decedent have known treatment for substance use disorder?

Variable: su\_treatment\_hx

Question type: Select only one.

Definition: Indicates whether there was known access to substance use disorder treatment in the year prior to death.

Guidance: A diagnosis does not imply that treatment was received. The decedent may have been out of compliance with treatment for a diagnosed condition.

Treatment for substance use disorder includes:

- Seeing a psychiatrist, a psychologist, a medical doctor, a therapist, or another counselor (including religious or spiritual counselors) for a substance use disorder.
- Prescribed medicine as part of medication-assisted treatment, such as buprenorphine (Suboxone™), methadone, and naltrexone. Include as current or past treatment only if there is clear evidence that prescriptions were for treatment of opioid addiction and not for treatment of pain.
- Residing in an inpatient facility, a group home, or a halfway house for people with substance use disorders.

- Participating in Narcotics Anonymous.

The following situations should not be included as evidence of treatment for substance abuse:

- There was a positive toxicology test for substances associated with medication-assisted treatment (such as buprenorphine), without further evidence that the substances were being taken to treat substance use disorder, because methadone and buprenorphine can both be prescribed for pain. There must also be some indication that the decedent was being treated for a substance use disorder, such as a current prescription or a report by a family member. If toxicology results and/or scene evidence/witness report indicate that the decedent was taking buprenorphine, methadone, or another medication, but there is no evidence that the medication was prescribed to the decedent, do not code as treatment because the medications can be bought illegally (either in the context of substance use disorder or to treat substance use disorder without getting a prescription).
- There is evidence that the decedent received care or treatment for something related to substance use disorder, but there is no evidence that the underlying substance use disorder was treated, for example:
  - The decedent was reported as previously passing out from or receiving medical care for alcohol intoxication.
  - The decedent previously sought medical care after experiencing adverse effects from drug use that were not acute, such as constipation or skin rashes.
  - The decedent previously sought medical care to treat withdrawal symptoms or to assist with detox.
  - The decedent previously sought medical care for injection-related conditions such as abscesses, endocarditis, or fevers.

Reference: SUDORS 4.2.c Treatment for Substance Abuse (Definition for Guidance)

12.5a) At the time of death, was the decedent known to be under care or receiving treatment for a substance use disorder?

Variable: su\_treatment

Question type: Select only one.

Definition: Indicates whether the decedent was under treatment for a substance use disorder at the time of his or her fatal overdose.

Guidance: A diagnosis does not imply that treatment was received. The decedent may have been out of compliance with treatment for a diagnosed condition.

Treatment for substance use disorder includes:

- Seeing a psychiatrist, a psychologist, a medical doctor, a therapist, or another counselor (including religious or spiritual counselors) for a substance use disorder.
- Prescribed medicine as part of medication-assisted treatment, such as buprenorphine (Suboxone™), methadone, and naltrexone. Include as current or past treatment only if

there is clear evidence that prescriptions were for treatment of opioid addiction and not for treatment of pain.

- Residing in an inpatient facility, a group home, or a halfway house for people with substance use disorders.
- Participating in Narcotics Anonymous.

The following situations should not be included as evidence of treatment for substance abuse:

- There is a positive toxicology test for substances associated with medication-assisted treatment (such as buprenorphine), without further evidence that the substances were being taken to treat substance use disorder, because methadone and buprenorphine can both be prescribed for pain. There must also be some indication that the decedent was being treated for a substance use disorder, such as a current prescription or a report by a family member. If toxicology results and/or scene evidence/witness reports indicate that the decedent was taking buprenorphine, methadone, or another medication, but there is no evidence that the medication was prescribed to the decedent, do not code as treatment because the medications can be bought illegally (either in the context of substance use disorder or to treat substance use disorder without getting a prescription).
- There is evidence that the decedent received care or treatment for something related to substance use disorder, but there is no evidence that the underlying substance use disorder was treated, for example:
  - The decedent was reported as previously passing out from or receiving medical care for alcohol intoxication.
  - The decedent previously sought medical care after experiencing adverse effects from drug use that were not acute, such as constipation or skin rashes.
  - The decedent previously sought medical care to treat withdrawal symptoms or to assist with detox.
  - The decedent previously sought medical care for injection-related conditions such as abscesses, endocarditis, or fevers.

Reference: SUDORS 4.2.c Treatment for Substance Abuse (Definition for Guidance)

12.5b) Date of most recent known contact with a substance use disorder treatment provider

Variable: su\_treatment\_date

Question type: Text entry

Definition: Indicates the date of the most recent known contact with a substance use disorder treatment provider.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

Reference: None

12.5c) If exact date is not known, enter the approximate date of most recent known contact with a substance use disorder treatment provider

Variable: su\_treatment\_date\_app

Question type: Text entry

Definition: Approximate date of most recent known contact with a substance use disorder treatment.

Guidance: None

Reference: None

12.5d) What type of substance use disorder treatment did the decedent receive at his or her most recent known visit?

Variable: su\_treatment\_type

Question type: Check all that apply.

Definition: Indicates the type of treatment provider seen at the most recent substance use disorder treatment contact.

Guidance: None

Reference: American Society of Addiction Medicine (ASAM) Level of Care

12.6) At the time of the overdose incident, was the decedent known to be connected with a recovery coach or peer support specialist?

Variable: peer\_support

Question type: Select only one.

Definition: Indicates whether, at the time of death, the decedent was known to be connected with a recovery coach or a peer support specialist.

Guidance: None

Reference: None

12.7) In the 14 days prior to death, did the decedent have any of the following known substance use-related events?

Variable: su\_stressors

Question type: Check all that apply.

Definition: Indicates whether the decedent had any known substance use-related events 14 days prior to death.

Guidance: Returned to substance use: To select the return to substance use, there must be other documentation besides this overdose death. The decedent had a history of misusing opioids or an opioid use disorder and returned to using opioids after a period of not using opioids for at least one week.

People abstaining from opioid use after prolonged use lose their tolerance to the opioids during their period of abstinence. Loss of tolerance puts them at higher risk for overdose because they may return to the dosage they had been taking when they last used. A dose of heroin that previously was sufficient to create feelings of euphoria may result in an overdose after a period of abstinence.

12.8) In the 12 months prior to death, was substance use disorder treatment recommended by a health professional and/or identified as a need by the family, but the decedent did not receive care?

Variable: su\_recommendation

Definition: Indicates whether the decedent did not receive substance use treatment recommended to him or her.

Guidance: None

Reference: None

12.8a) Were there known barriers to accessing substance use disorder treatment?

Variable: su\_barrier

Question type: Select only one.

Definition: Indicates whether there were known barriers to accessing substance use disorder treatment.

Guidance: None

Reference: None

12.8b) What were the known barriers to accessing substance use disorder treatment?

Variable: su\_barrier\_type

Question type: Check all that apply.

Definition: Indicates the known barriers to accessing substance use disorder treatment.

Guidance: None

Reference: None

12.8c) Specify “Other”

Variable: su\_barrier\_type\_othr

Question type: Text entry

Definition: Specifies other known barrier to accessing substance use disorder treatment.

Guidance: None

Reference: None

### 13. Trauma History

13.1) As an adult, did the decedent have a known history of the following trauma or violence?

Variable: trauma\_adult

Question type: Check all that apply.

Definition: Indicates whether the decedent had any known traumatic or violent events as an adult.

Guidance: An adult is a person over age 18.

Reference: None

13.1a) Specify “Other”

Variable: trauma\_adult\_othr

Definition: Specifies other known traumatic or violent events experienced as an adult.

Guidance: None

Reference: None

13.2) In the 14 days prior to death, did the decedent have a known history of the following trauma or violence?

Variable: trauma\_stressor

Question type: Check all that apply.

Definition: Indicates whether the decedent had any known traumatic or violent events 14 days prior to death.

Guidance: None

Reference: None

### 13.2a) Specify “Other”

Variable: trauma\_stressor\_othr

Question type: Text entry

Definition: Specifies other known traumatic or violent event 14 days prior to death.

Guidance: None

Reference: None

### 13.3) Did the decedent have a known history of any of the following adverse childhood experiences?

Variable: aces

Question type: Check all that apply.

Definition: Indicates whether the decedent had any known or documented history of adverse childhood experiences.

Guidance: None

Reference: CDC ACEs list, [https://vetoviolence.cdc.gov/apps/phl/resource\\_center\\_infographic.html](https://vetoviolence.cdc.gov/apps/phl/resource_center_infographic.html)

## 14. Criminal Justice History

### 14.1) Did the decedent have any known criminal justice history?

Variable: cj\_history

Question type: Check all that apply.

Definition: Indicates whether the team knows of any decedent involvement with the criminal justice system.

Guidance: Community supervision includes probation and parole

- Incarceration includes juvenile detention, jail, and prison
- Post-adjudication programs include post-conviction or post-plea interventions, which may or may not include a specialty court such as drug court, mental health court, veteran’s treatment court, treatment court, etc.

- Pre-arrest/pre-charge diversion programs include connecting individuals to treatment/services or supervision rather than arresting or charging

Reference: None

14.1a) Specify “Other”

Variable: cj\_history\_othr

Question type: Text entry

Definition: Indicates other type of criminal justice history.

Guidance: None

Reference: None

14.2) Over the decedent’s life, number of known arrests

Variable: arrest\_number

Question type: Text entry

Definition: Indicates the total number of known arrests for the decedent.

Guidance: Range 1–100

Reference: None

14.2a) Age (in years) at first known arrest

Variable: arrest\_age

Question type: Text entry

Definition: Indicates how old the decedent was at his or her first known arrest.

Guidance: Range 1–120 years. Enter 999 for unknown.

Reference: None

14.2b) What was the first known arrest offense?

Variable: arrest\_reason

Question type: Select one

Definition: Indicates the primary/most serious offense for the first known arrest.

Guidance: Status offense is a noncriminal act that is considered a violation or illegal because of the individual's age (for example, running away).

Reference: None

14.2c) Specify "Other"

Variable: arrest\_reason\_othr

Question type: Text entry

Definition: Indicates other type of arrest offense.

Guidance: None

Reference: None

14.2d) Over the decedent's life, number of known arrests that included a drug-related charge

Variable: drug\_arrest\_number

Question type: Text entry

Definition: Indicates the total number of known drug-related arrests the decedent had.

Guidance: Range 1–100

Reference: None

14.2e) Date of most recent known arrest

Variable: arrest\_recent\_date

Question type: Text entry

Definition: Indicates the date of the most recent known arrest.

Guidance: You must enter "MM" and "DD" as two-digit numbers (e.g., "06" for June, not "6"). Enter 09-09-9999 if exact date is unknown.

Reference: None

14.2f) If exact date is unknown, enter approximate date of the most recent known arrest

Variable: arrest\_recent\_app

Question type: Text entry

Definition: Approximate date of most recent known arrest.

Guidance: Enter the approximate date (e.g., June 2020)

Reference: None

14.3) Over the decedent's life, number of known episodes of community supervision

Variable: supervision\_number

Question type: Text entry (integer)

Definition: Indicates the total number of known episodes of community supervision the decedent had. Community service includes probation and parole.

Guidance: Range 1–100

Reference: None

14.3a) Over the decedent's life, total/known time (in months) under community supervision

Variable: supervision\_time

Question type: Text entry (integer)

Definition: Indicates the total known time (in months) the decedent was under community supervision throughout his or her life.

Guidance: Range 1–998

Reference: None

14.3b) Age (in years) when placed on first known community supervision

Variable: supervision\_age

Question type: Text entry (integer)

Definition: Indicates how old the decedent was when placed on his or her first known community supervision.

Guidance: Range 1–120

14.3c) Was the decedent known to have received any of these services while under community supervision?

Variable: supervision\_services

Question type: Check all that apply.

Definition: Indicates services the decedent received for any community supervision throughout his or her life, not just the most recent.

Guidance: None

Reference: None

14.3d) Specify "Other"

Variable: supervision\_services\_othr

Question type: Text entry

Definition: Specifies other service decedent received for any community supervision throughout his or her life.

Guidance: None

Reference: None

14.3e) At the time of the overdose incident, was the decedent under community supervision?

Variable: supervision\_od

Question type: Select only one.

Definition: Indicates whether the decedent was under community supervision at the time of the overdose incident. This includes probation and parole.

Guidance: None

Reference: None

14.3f) Date of initiation for most recent known community supervision

Variable: supervision\_date

Question type: Text entry.

Definition: Indicates the date of initiation for the decedent's most recent known community supervision.

Guidance: You must enter "MM" and "DD" as two-digit numbers (e.g., "06" for June, not "6"). Enter 09-09-9999 if exact date is unknown.

Reference: None

14.3g) If exact date is unknown, enter approximate date of initiation for most recent known community supervision

Variable: supervision\_date\_app

Question type: Text entry

Definition: Approximate date of initiation for most recent known community supervision.

Guidance: Enter the approximate date (e.g., June 2020)

Reference: None

14.4) Over the decedent's life, number of known incarcerations

Variable: incarceration\_number

Question type: Text entry (integer)

Definition: Indicates the total number of known incarcerations the decedent had.

Guidance: Range 1–120. Incarceration includes juvenile detention, jail, and prison.

Reference: None

14.4a) Age (in years) at first known incarceration

Variable: incarceration\_age

Question type: Text entry (integer)

Definition: Indicates how old the decedent was at his or her first known incarceration.

Guidance: Range 1–120. Incarceration includes juvenile detention, jail, and prison.

Reference: None

14.4b) Was the decedent known to have received any of these services while incarcerated?

Variable: incarceration\_services

Question type: Check all that apply.

Definition: Indicates services the decedent received for any incarceration, not just the most recent incarceration.

Guidance: None

Reference: None

14.4c) At the time of the overdose incident, was the decedent incarcerated?

Variable: incarceration\_od

Question type: Select only one.

Definition: Indicates whether the decedent was incarcerated at the time of the overdose incident.

Guidance: Incarceration includes juvenile detention, jail, and prison.

Reference: None

14.4d) Type of facility

Variable: incarceration\_facility

Question type: Select only one.

Definition: Indicates in what type of facility the decedent was incarcerated at the time of the overdose.

Guidance: None

Reference: None

14.4e) Specify "Other"

Variable: incarceration\_facility\_othr

Question type: Text entry

Definition: Specifies other type of facility the decedent was incarcerated at the time of the overdose.

Guidance: None

Reference: None

14.4f) Date of entry for most recent known incarceration

Variable: entry\_date

Question type: Text entry

Definition: Indicates the date of entry for the most recent known incarceration.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

Reference: None

14.4g) If exact date is unknown, enter approximate date of entry of most recent known incarceration

Variable: entry\_date\_app

Question type: Text entry

Definition: Approximate date of most entry of recent known incarceration.

Guidance: Enter the approximate date (e.g., June 2020).

14.4h) Date of release for most recent known incarceration

Variable: release\_date

Question type: Text entry

Definition: Indicates the date of release for the most recent known incarceration.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

Reference: None

14.4i) If exact date is unknown, enter approximate date of release of most recent known incarceration

Variable: release\_date\_app

Question type: Text entry

Definition: Approximate date of release of most recent known incarceration.

Guidance: Enter the approximate date (e.g., June 2020).

14.5) Date of entry for most recent known post-adjudication program and/or specialty courts

Variable: spec\_court\_date

Question type: Text entry

Definition: Indicates the date of the decedent’s most recent known date of entry in a post-adjudication program and/or specialty court. Post-adjudication programs include post-conviction or

post-plea interventions, which may or may not include specialty court. Specialty courts include courts such as drug court, mental health court, veteran’s treatment court, treatment court, etc.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”). Enter 09-09-9999 if exact date is unknown.

Reference: None

14.5a) If exact date is unknown, enter approximate date of entry for most recent known post-adjudication program and/or specialty courts

Variable: spec\_court\_date\_app

Question type: Text entry

Definition: Approximate date of entry for most recent known post-adjudication program and/or specialty courts.

Guidance: Enter the approximate date (e.g., June 2020).

Reference: None

14.5b) For the most recent post-adjudication program and/or specialty court, please specify the type of program or court.

Variable: spec\_court\_type

Question type: Check all that apply.

Definition: Indicates the decedent’s most recent type of post-adjudication program and/or specialty court. Post-adjudication programs include post-conviction or post-plea interventions, which may or may not include specialty court. Specialty courts include courts such as drug court, mental health court, veteran’s treatment court, treatment court, etc.

Guidance: None

Reference: None

14.5b) Specify “Other”

Variable: spec\_court\_type\_othr

Question type: Text entry

Definition: Specifies other type of program or court.

Guidance: None

Reference: None

14.5c) Did the decedent complete the requirements for the most recent post-adjudication program and/or specialty court?

Variable: spec\_court\_requirements

Question type: Select only one.

Definition: Indicates whether the decedent completed post-adjudication program and/or specialty court requirements. Post-adjudication programs include post-conviction or post-plea interventions, which may or may not include specialty court. Specialty courts include courts such as drug court, mental health court, veteran's treatment court, treatment court, etc.

Guidance: None

Reference: None

14.5d) Why did the decedent not complete post-adjudication program and/or specialty court requirements?

Variable: spec\_court\_why\_not

Question type: Check all that apply.

Definition: Indicates the reasons the decedent did not complete post-adjudication program and/or specialty court requirements. Post-adjudication programs include post-conviction or post-plea interventions, which may or may not include specialty court. Specialty courts include courts such as drug court, mental health court, veteran's treatment court, treatment court, etc.

Guidance: Abscondment means that a failure to surrender for custody at the appointed time.

Reference: None

14.5e) Specify "Other"

Variable: spec\_court\_why\_not\_othr

Question type: Text entry

Definition: Specifies other reason the decedent did not complete post-adjudication program and/or specialty court requirements.

Guidance: None

Reference: None

14.6) Date of most recent known pre-arrest/pre-charge diversion

Variable: pre\_arrest\_date

Question type: Text entry

Definition: Indicates the date of the decedent's most recent known pre-arrest/pre-charge diversion. Pre-arrest/pre-charge diversion programs include connecting individuals to treatment/services or supervision rather than arresting or charging.

Guidance: You must enter "MM" and "DD" as two-digit numbers (e.g., "06" for June, not "6"). Enter 09-09-9999 if exact date is unknown.

Reference: None

14.6a) If exact date is unknown, enter approximate date of most recent known pre-arrest/pre-charge diversion

Variable: pre\_arrest\_date\_app

Question type: Text entry

Definition: Enter the approximate date (e.g., June 2020).

Guidance: None

Reference: None

14.7) In the 14 days prior to death, did the decedent have any of the following known interactions with the criminal justice system?

Variable: cj\_dec\_stressors

Question type: Check all that apply.

Definition: Indicates whether the decedent experienced any interactions with the criminal justice system in the 14 days prior to death.

Guidance: None

Reference: None

14.7a) Specify "Other"

Variable: cj\_dec\_stressors

Question type: Text entry

Definition: Specifies the other interaction the decedent had with the criminal justice system in the 14 days prior to death.

Guidance: None

Reference: None

14.7b) In the 14 days prior to death, did the decedent's partner have any of the following known interactions with the criminal justice system?

Variable: cj\_part\_stressors

Question type: Check all that apply.

Definition: Indicates whether the decedent's partner experienced any interactions with the criminal justice system in the 14 days prior to decedent's death.

Guidance: None

Reference: None

14.7c) Specify "Other"

Variable: cj\_part\_stressors

Question type: Text entry

Definition: Specifies the other interaction the decedent's partner had with the criminal justice system in the 14 days prior to decedent's death.

Guidance: None

Reference: None

14.7d) In the 14 days prior to death, did the decedent's child have any of the following known interactions with the criminal justice system?

Variable: cj\_child\_stressors

Question type: Check all that apply.

Definition: Indicates whether the decedent's child experienced any interactions with the criminal justice system in the 14 days prior to decedent's death.

Guidance: None

Reference: None

14.7e) Specify “Other”

Variable: cj\_child\_stressors

Question type: Text entry

Definition: Specifies the other interaction the decedent’s child had with the criminal justice system in the 14 days prior to decedent’s death.

Guidance: None

Reference: None

## 15. Social Service History

15.1) Did the decedent have a known history of receiving any of these social services?

Variable: ss\_history

Question type: Check all that apply.

Definition: Indicates the decedent’s known history receiving social services.

Guidance: None

Reference: Federal government benefits, <https://www.usa.gov/benefits>

15.1a) Specify “Other”

Variable: ss\_history\_othr

Question type: Text entry

Definition: Specifies other social service decedent had a known history of receiving.

Guidance: None

Reference: None

15.2) At the time of death, was it known that the decedent was receiving any of these social services?

Variable: social\_service

Question type: Check all that apply.

Definition: Indicates social service benefits the decedent was known to be receiving at the time of his or her death.

Guidance: None

Reference: Federal government benefits, <https://www.usa.gov/benefits>

15.2a) Specify “Other”

Variable: social\_service\_othr

Definition: Specifies other social service decedent was known to be receiving at the time of his or her death.

Guidance: None

Reference: None

15.3) Did the decedent have a known history of having his/her children removed from their home by child protective services?

Variable: cps\_history

Question type: Select only one.

Definition: Indicates whether the decedent was known to have his/her children removed from their home by child protective services.

Guidance: None

Reference: None

15.3a) Where was/were the child or children placed?

Variable: cps\_placement

Question type: Check all that apply.

Definition: Indicates where the child was placed.

Guidance: None

Reference: None

15.3b) Specify “Other”

Variable: cps\_placement\_othr

Definition: Specifies other placement of child.

Guidance: None

Reference: None

15.4) At the time of death, was there a known open child protective services case involving the decedent as a potential perpetrator?

Variable: cps\_perpetrator

Question type: Select only one.

Definition: Indicates whether the decedent had a known child protective case as a potential perpetrator at the time of death.

Guidance: None

Reference: None

15.4a) Were the child protective services allegations substance-use-related?

Variable: cps\_perpetrator\_su

Question type: Select only one.

Definition: Indicates whether child protective services allegations were substance-use-related.

Guidance: None

Reference: None

15.5) At the time of death, was there a known open child protective services case involving the decedent as a victim?

Variable: cps\_victim

Question type: Select only one.

Definition: Indicates whether the decedent had a known child protective services case as a victim at the time of death.

Guidance: None

Reference: None

15.5a) Were the child protective services allegations substance-use-related?

Variable: cps\_victim\_su

Question type: Select only one.

Definition: Indicates whether child protective services allegations were substance-use-related.

Guidance: None

Reference: None

15.6) As a child, was the decedent ever known to be removed from his or her home?

Variable: home\_removal

Question type: Select only one.

Definition: Indicates whether the decedent was ever known to be removed from his or her home.

Guidance: None

Reference: None

15.7) In the 14 days prior to death, did the decedent have any known child protective services-related stressors?

Variable: cps\_stressors

Question type: Check all that apply.

Definition: Indicates whether the decedent experienced any child protective services-related stressors in the 14 days prior to death.

Guidance: None

Reference: None

## 16. Education History

16.1) Did the decedent have any known history of problems at school?

Variable: education\_history

Question type: Check all that apply.

Definition: Indicates whether there is a known or documented history of performance or behavior issues at school.

Guidance: Regardless of age, whether an individual was known to have significant problems at school with performance and/or behavior.

Reference: None

16.2) In the 14 days prior to death, did the decedent have any known education-related stressors?

Variable: education\_stressors

Question type: Check all that apply.

Definition: Identifies possible life stressors that were school- or education-related in the 14 days before death.

Guidance: Indicates what type of school stressor was experienced 14 days prior to death.

Reference: None

## 17. Recommendations

Questions 175–178 capture any initial recommendations that were identified when reviewing the case. Each recommendation concept identified for each case should be captured separately. The section allows for looping through questions for each recommendation (up to five recommendations).

This section is different from the Recommendation Monitoring module, in which the recommendation will be drafted, revised, and monitored in detail over time after multiple cases have been reviewed.

17.1) Did the review of the case identify any recommendations?

Variable: recommend\_identified

Question type: Select only one.

Definition: Indicates whether any recommendations were identified from the case review.

Guidance: Recommendation does not need to be fully formalized or identified to select “yes.”

Reference: None

17.2) Provide a brief description of the initial recommendation identified

Variable: recommend\_1 (if more than one: recommend\_2, recommend\_3, recommend\_4, and recommend\_5)

Question type: Text entry

Definition: Brief summary of initial recommendation identified. Limit to 280 characters.

Guidance: Initial recommendation idea captured in 280 characters or fewer.

The following should not be included:

- Personal identifying information such as names of towns, streets, people, providers, law enforcement departments, hospitals, businesses, etc.
- Specific dates
- Abbreviations
- Incomplete sentences (they are hard to understand)

Reference: None

### 17.3) What types of recommendation strategies were identified?

Variable: recommend\_strategy\_1 (if more than one: recommend\_strategy\_2, recommend\_strategy\_3, recommend\_strategy\_4, recommend\_strategy\_5)

Question type: Check all that apply.

Definition: Indicates for each recommendation the strategy(strategies) or focus area(s).

Guidance: Check all that apply to best describe the recommendation.

Reference: None

### 17.3a) Specify "Other"

Variable: recommend\_strat\_1\_othr (if more than one: recommend\_strat\_2\_othr, recommend\_strat\_3\_othr, recommend\_strat\_4\_othr, recommend\_strat\_5\_othr)

Question type: Text entry

Definition: Specify other recommendation strategy identified.

Guidance: None

Reference: None

### 17.4) Jurisdictional levels responsible for implementing the recommendation

Variable: recommend\_jurisdiction\_1 (if more than one: recommend\_jurisdiction\_2, recommend\_jurisdiction\_3, recommend\_jurisdiction\_4, recommend\_jurisdiction\_5)

Question type: Check all that apply.

Definition: Identify the level of jurisdiction responsible for implementing each recommendation.

Complete recommend\_jurisdiction\_1 for recommend\_strategy\_1, recommend\_jurisdiction\_2 for recommend\_strategy\_2, and so on until recommend\_jurisdiction\_5 for recommend\_strategy\_1.

Guidance: Each type of recommendation must be implemented at different jurisdiction levels.

Reference: None

17.5) Did this case generate another recommendation?

Variable: recommend\_another (if more than one: recommend\_another\_2, recommend\_another\_3, recommend\_another\_4)

Question type: Select only one.

Definition: Indicates whether another recommendation was identified.

Guidance: Recommendation does not need to be fully formalized or identified to select “yes.”

Reference: None

## 18. Case-Specific Community Context

Questions 179–197: Based on the defined community geographical scope, provides context about the community in which the individual lived.

The measures in this section are subjective in nature. They rely on the Overdose Fatality Review team members’ awareness of the community to determine the degree to which they agree with the responses offered. Some measures provide only “yes” or “no” categories. If OFR team members are unsure, they should select “no.” Other measures are based on a three-point Likert scale.

The community is defined based on where the decedent lived and how specific the OFR team decides to be when defining the community (county, city, neighborhood, ZIP code); see question 178.

18.1) State in which the decedent lived

Variable: community\_state

Question type: Select only one.

Definition: Indicates the state in which the decedent lived.

Guidance: Provides geographical context for the community in which the decedent lived.

Reference: None

18.1a) Indicate the level of community for which the community context questions will be answered

Variable: comm\_level

Definition: Indicates at what community level the community context variables are completed.

Guidance: Provides geographical context for the community in which the decedent lived. Determine which community context most closely represents the community in which the decedent lived.

Reference: None

18.1b) County in which the decedent lived

Variable: community\_county\_xx

Question type: Select only one.

Definition: Indicates the county in which the decedent lived.

Guidance: Provides geographical context for the community in which the decedent lived.

Reference: None

18.1c) City in which decedent lived

Variable: community\_city

Question type: Text entry

Definition: Indicates the city in which the decedent lived.

Guidance: Provides geographical context for the community in which the decedent lived.

Reference: None

18.1d) Neighborhood in which the decedent lived

Variable: community\_neighborhood

Question type: Text entry

Definition: Indicates the neighborhood in which the decedent lived.

Guidance: Provides geographical context for the community in which the decedent lived. This level may be utilized if the decedent is from a distinct neighborhood in a large metropolitan city.

Reference: None

18.1e) ZIP code in which the decedent lived

Variable: community\_zip

Question type: Text entry (zipcode)

Definition: Indicates the ZIP code in which the decedent lived.

Guidance: Provides geographical context for the community in which the decedent lived.

Reference: None

18.2) Does the community have access to and monitor multiple data sources to guide prevention and intervention planning strategies?

Variable: multiple\_data

Question type: Select only one.

Definition: Communities that use multiple data sources to understand and develop prevention and intervention strategies are more likely to be successful in targeting their activities.

Guidance: Indicates whether the community actively uses and analyzes data from multiple data sources to help guide the planning and implementation of prevention and intervention strategies.

Reference: None

18.3) Does the community have a targeted naloxone distribution program?

Variable: naloxone\_distribution

Question type: Select only one.

Definition: Targeted distribution programs seek to train and equip individuals who are most likely to encounter or witness an overdose—especially people who use drugs and first responders—with naloxone kits—which they can use in an emergency to save a life.

Guidance: There are many different approaches to distributing naloxone to people at high risk of experiencing or witnessing an overdose. Effective approaches include community distribution programs, co-prescription of naloxone, and equipping first responders.

Reference: Evidence-Based Strategies for Preventing Opioid Overdose: What's Working in the United States, <https://www.cdc.gov/drugoverdose/pdf/pubs/2018-evidence-based-strategies.pdf>

18.4) Does the community have a coordinated rapid response team/plan to respond to spikes in overdoses, overdose-related events, or emerging drug trends?

Variable: response\_plan

Question type: Select only one.

Definition: Having a rapid response plan to respond to a spike in overdoses can be helpful in preventing future overdose deaths.

Guidance: Indicates whether the community has a known coordinated response.

Reference: None

18.5) Is the community considered a high-density-use and/or high-density-overdose area?

Variable: high\_density

Question type: Select only one.

Definition: Some communities or areas have higher overdose rates or use than others.

Guidance: Indicates whether the area where the overdose death occurred is in an already defined high-risk/-rate or high-use area.

Reference: None

18.6) To what extent is MAT (medication-assisted treatment) available in the community?

Variable: mat\_available

Question type: Select only one.

Definition: Medication-assisted treatment (MAT) is a proven pharmacological treatment for opioid use disorder. The backbone of this treatment is made up of U.S. Food and Drug Administration (FDA)-approved medications. The agonist drugs methadone and buprenorphine activate opioid receptors in the brain, preventing painful opioid withdrawal symptoms without causing euphoria; naltrexone blocks the effects of opioids. MAT is effective at reducing use and helping people to lead normal lives.

Guidance: Indicates whether MAT is unavailable, whether some is available or limited, or whether it is adequately available in the community.

Medication-assisted treatment includes three FDA-approved medications for opioid use disorder: methadone, buprenorphine, and naltrexone.

According to the U.S. Centers for Disease Control and Prevention (CDC), MAT works best when:

- It is combined with ancillary treatment strategies such as counseling and social support with fixed, safe, and predictable doses of medications.
- Public awareness of MAT as an effective medical intervention is promoted by local leadership. This helps to reduce stigma against MAT that discourages people from seeking this form of care.
- Entry into treatment is voluntary. Compulsory treatment programs through legal and social welfare systems are less effective than voluntary treatment.
- Patients have access to a variety of medication options. All patients are different, and treatment is best when individualized. Some people fare significantly better on buprenorphine than on methadone, and vice versa. Some may need to try several treatment options before discovering what works best, and some may not have access to all MAT medications.
- The challenges of receiving MAT are understood and mitigated. Many individuals face hurdles in receiving approval for MAT from their health insurance providers. Many methadone clinics require patients to attend daily to receive treatment. This can mean long, burdensome commutes at odd hours, which can conflict with professional, familial, or care-giving responsibilities. Those who live in rural areas, for example, may have to drive hours to receive care. Treatment is more successful when these obstacles are not placed in the way.

Reference: Evidence-Based Strategies for Preventing Opioid Overdose: What’s Working in the United States, <https://www.cdc.gov/drugoverdose/pdf/pubs/2018-evidence-based-strategies.pdf>

18.7) To what extent is MAT (medication-assisted treatment) available to individuals upon release from jails or pre-trial detention?

Variable: mat\_cj

Question type: Select only one.

Definition: Identifies the level of MAT available to individuals upon release from jails or pre-trial detention. MAT should be made available as a standard of care for incarcerated individuals with opioid use disorder.

Those receiving MAT when they enter criminal justice settings may continue receiving this treatment, and those who are not on treatment may initiate and continue this form of care while incarcerated and then be linked with appropriate care providers to continue MAT upon release.

Guidance: Indicates whether MAT is unavailable, whether some is available or limited, or whether it is adequately available to individuals upon release from jails or pre-trial detention.

Medication-assisted treatment includes three FDA-approved medications for opioid use disorder: methadone, buprenorphine, and naltrexone.

According to the U.S. Centers for Disease Control and Prevention (CDC), MAT in criminal justice settings works best when:

- MAT is uninterrupted for those who were receiving care prior to incarceration. MAT can be initiated in criminal justice settings.
- Individuals have access to all available forms of MAT medication. This choice is essential, since some individuals fare much better (or worse) on one of these drugs than on others.
- An effective system for referral and linkage to care is in place so that individuals on MAT can receive a “warm handoff” to providers who are able to continue their care upon release. Otherwise, recently released individuals are forced to choose between enduring painful opioid withdrawal and quickly finding another source of opioids. The quickest and easiest sources of opioids are illicit ones.

Reference: Evidence-Based Strategies for Preventing Opioid Overdose: What’s Working in the United States, <https://www.cdc.gov/drugoverdose/pdf/pubs/2018-evidence-based-strategies.pdf>

18.8) To what extent is buprenorphine-based MAT (medication-assisted treatment) initiated in local emergency departments?

Variable: mat\_ed

Question type: Select only one.

Definition: Identifies the extent to which buprenorphine-based MAT is initiated in local emergency departments.

Patients receiving care in emergency departments who have untreated opioid use disorder are referred to a provider for long-term buprenorphine-based MAT. This referral is accompanied by initial doses of buprenorphine or a short-term prescription that can be filled right away. The patient can begin treatment immediately, instead of waiting several days for his or her appointment with a new provider.

Guidance: Indicates whether there is no buprenorphine-based MAT initiated, whether initiated in some EDs, or whether adequately initiated in area emergency departments.

According to the U.S. Centers for Disease Control and Prevention (CDC), there is no broadly accepted best practice for initiating patients into buprenorphine-based MAT in an emergency department. This intervention is very new, and researchers are still studying how best to serve patients’ needs and assist them in engaging with care. Patients who are initiated in the emergency department are very likely there because they have experienced overdose crises. It can be expected that such experiences may change the meaning of treatment for these patients, and the value of treatment may change in an inconsistent or counterintuitive way over time.

What we do know, however, is that each instance of engagement in MAT, even if the patient eventually drops out of care, predicts higher success the next time treatment is sought. Furthermore, providing “bridging” doses of MAT medications to individuals seeking treatment greatly improves patient engagement in MAT care during treatment initiation—a key moment for those with opioid use disorder, when maintaining trust and stability is of utmost importance.

Reference: Evidence-Based Strategies for Preventing Opioid Overdose: What’s Working in the United States, <https://www.cdc.gov/drugoverdose/pdf/pubs/2018-evidence-based-strategies.pdf>

18.9) To what extent are syringe service programs available in the community?

Variable: syringe\_service

Question type: Select only one.

Definition: Identifies the extent to which syringe services are available in the community.

Sometimes called “needle exchange” or “syringe exchange,” syringe services programs provide access to clean and sterile equipment used for the preparation and consumption of drugs as well as tools for the prevention and reversal of opioid overdose, such as naloxone training and distribution, fentanyl testing strips, and more. Comprehensive syringe services programs also provide additional social and medical services, such as safe disposal of syringes and needles; testing for HIV and hepatitis C infection and linkage to treatment; education about overdose and safer injection practices; referral and access to drug treatment programs, including MAT; tools to prevent HIV and other infectious disease, such as condoms, counseling, or vaccinations; and linkage to medical, mental health, and social services.

Guidance: Indicates whether syringe service is unavailable, whether some is available and limited, or whether it is adequately available in the community.

According to the U.S. Centers for Disease Control and Prevention (CDC), syringe services programs work best when:

- They provide an adequate supply of sterile syringes. Limiting the number of syringes an individual may receive reduces the effectiveness of the intervention. Programs with one-for-one exchange policies, for example, allow participants only as many syringes as the number of used syringes they return, thus undercutting the program’s effectiveness. When no limits are set on the number of syringes distributed, participants are more likely to have clean syringes on hand when they need them, and they can provide syringes to many more people than can attend the program themselves, thus multiplying the program’s effectiveness. This also increases participants’ incentive to visit the program and interact with staff members and counselors.

- The needs and concerns specific to the local drug-using community are addressed and accommodated by the program.
- Program participants who are seeking treatment for opioid use disorder or for other physical or mental health concerns are offered assistance in accessing appropriate care.

Reference: Evidence-Based Strategies for Preventing Opioid Overdose: What’s Working in the United States, <https://www.cdc.gov/drugoverdose/pdf/pubs/2018-evidence-based-strategies.pdf>

18.10) To what extent is wraparound follow-up care available after a nonfatal overdose?

Variable: follow\_up

Question type: Select only one.

Definition: Follow-up services after a nonfatal overdose death can link individuals to care and prevent future overdoses and death.

Guidance: Indicates whether follow-up service is unavailable, whether some is available and limited, or whether it is adequately available in the community to those who have experienced a nonfatal overdose.

Reference: None

18.11) To what extent is naloxone available among substance use disorder treatment providers?

Variable: naloxone\_sud

Question type: Select only one.

Definition: Naloxone distribution in treatment facilities (both inpatient and outpatient) targets individuals who are about to cease treatment to receive overdose response training and naloxone kits prior to their exit from those programs or facilities.

Guidance:

According to the U.S. Centers for Disease Control and Prevention (CDC), naloxone distribution in treatment centers works best when:

- Coverage of these distribution programs is universal, providing all individuals leaving treatment with the opportunity to be trained and receive naloxone kits. This is preferable to opt-in programs that require inmates to request special services to receive naloxone.
- Training is provided in a way that refrains from making negative judgments about drug use and focuses instead on the importance of every person’s safety and well-being, even in the context of drug use.

- Close contacts of each individual (family, partners, and children) are also trained in naloxone administration and overdose response.
- Naloxone distribution in treatment centers works best when there is certainty in the supply chain and in funding. In treatment settings, an individual's insurance can cover the cost of naloxone.

Reference: Evidence-Based Strategies for Preventing Opioid Overdose: What's Working in the United States, <https://www.cdc.gov/drugoverdose/pdf/pubs/2018-evidence-based-strategies.pdf>

18.12) To what extent is naloxone available in criminal justice facilities (for example, courts, jails, and probation)?

Variable: naloxone\_cj

Question type: Select only one.

Definition: Naloxone distribution in criminal justice facilities targets individuals who are about to be released from supervision to receive overdose response training and naloxone kits prior to their exit from those programs or facilities.

Guidance:

According to the U.S. Centers for Disease Control and Prevention (CDC), naloxone distribution in treatment centers works best when:

- Coverage of these distribution programs is universal, providing all individuals leaving criminal justice settings with the opportunity to be trained and receive naloxone kits. This is preferable to opt-in programs that require inmates to request special services to receive naloxone.
- Training is provided in a way that refrains from making negative judgments about drug use and focuses instead on the importance of every person's safety and well-being, even in the context of drug use.
- Close contacts of each individual (family, partners, and children) are also trained in naloxone administration and overdose response.
- Naloxone distribution in criminal justice settings works best when there is certainty in the supply chain and in funding. In treatment settings, an individual's insurance can cover the cost of naloxone.

Reference: Evidence-Based Strategies for Preventing Opioid Overdose: What's Working in the United States, <https://www.cdc.gov/drugoverdose/pdf/pubs/2018-evidence-based-strategies.pdf>

18.13) To what extent is naloxone available and used by law enforcement and other first responders?

Variable: naloxone\_le

Question type: Select only one.

Definition: Indicates the frequency of use of naloxone by local law enforcement and first responders.

Guidance: Indicates the level of naloxone use by local law enforcement and first responders.

Reference: None

18.14) In the three months prior to the death, were there any significant overdose prevention-related policy changes in the community?

Variable: policy\_changes

Question type: Select only one.

Definition: Overdose prevention-related policy changes may include:

- Increasing and maximizing use of prescription drug monitoring programs
- Changing prescribing practices related to pain management
- Detecting and addressing inappropriate prescribing or opioid pain relievers
- Increasing access to substance use disorder treatment services, including medication-assisted treatment (MAT) for opioid addiction
- Expanding first responder access to naloxone

Guidance: If, three months prior to the overdose death, there was a significant change in any overdose prevention-related policies in the community, select “yes.”

Reference: Opioid Overdose Promising State Strategies,  
<https://www.cdc.gov/drugoverdose/policy/index.html>

18.15) In the three months prior to the death, were there any significant overdose prevention-related funds awarded to the community?

Variable: prevention\_funds

Question type: Select only one.

Definition: Indicates whether there was an increase in prevention funding in the community.

Guidance: Captures an increase in funding for community overdose prevention activities, such as naloxone distribution, treatment, transportation to and from treatment, awareness campaigns, coalition building, data analysis, etc.

Reference: None

18.16) In the three months prior to the death, were there any significant overdose prevention-related funds lost to the community?

Variable: prevention\_funds\_lost

Question type: Select only one.

Definition: Indicates whether there was a decrease in prevention funding in the community.

Guidance: Captures a decrease in funding for community overdose prevention activities, such as naloxone distribution, treatment, transportation to and from treatment, awareness campaigns, coalition building, data analysis, etc.

Reference: None

18.17) In the three months prior to the death, were there any changes in elected officials in the community?

Variable: elected\_officials

Question type: Select only one.

Definition: Indicates whether there were local-level elected leadership changes.

Guidance: Political leaders can set the tone for local prevention efforts and priorities.

Reference: None

18.18) In the 14 days prior to the death, were there any high-profile overdoses in the community?

Variable: high\_profile\_od

Question type: Select only one.

Definition: Indicates whether there were any high-profile overdoses in the community.

Guidance: A high-profile overdose may be fatal or nonfatal and may include events such as a death by a political or prominent individual in the community, a public overdose death with a lot of media coverage, etc.

Reference: None

18.19) Was the death possibly connected or related to a contaminated/tainted batch or a community spike in overdoses?

Variable: od\_batch\_spike

Question type: Select only one.

Definition: Indicates whether this overdose death was likely related to a contaminated/tainted batch or a significant community spike in overdoses.

Guidance: If the death was around the time of an identified spike in cases, for example, identified by ODMAP platform, or if there was a known batch of contaminated/tainted substance in the community, select “yes.”

Reference: ODMAP, [www.odmap.org](http://www.odmap.org)

## 19. Site-Specific Variables

This section includes variables that will be stored locally and not be uploaded to a national database to protect personal health information. In addition, space is available for up to 15 (fifteen) site-specific variables/data elements that OFR sites want to capture.

### 19.1 – 19.15) Site-specific data elements

Sites may generate their own variables. Sites will want to develop guidance for each of these variables using the following fields:

- Variable
- Skip logic
- Definition
- Guidance
- Reference

## 20. Narrative Section

This section allows for de-identified data summarizing the case to be stored.

Variable: narrative

Question type: Text entry (250-word limit)

Definition: Narrative accounts of the incident serve multiple purposes:

- Briefly summarize the incident (who, what, when, where, and why).

- Provide supporting information on circumstances that the abstractor has endorsed in an incident.
- Provide the context for understanding the incident.
- Record information and additional detail that cannot be captured elsewhere.
- Facilitate data quality control checks on the coding of key variables.

### Guidance:

The narrative summarizes the overdose fatality review findings. Throughout, refer to the decedent as “decedent.” At a minimum, the following should be included in all narratives:

- Where the overdose occurred (or the decedent was found)—not a specific place or address, but a description such as “at home,” “at work,” or “on the street,” such as listed in the “Type of location where overdose” data element
- Additional detail on all circumstances coded in the data source tab
- Timing of circumstances (e.g., released from jail immediately prior to the overdose)
- A description of other circumstances not captured in standardized coding
- The following should not be included in any narratives:
  - Personal identifying information such as names of people, towns, streets, law enforcement departments, and hospitals
  - Specific dates
  - Abbreviations
  - Incomplete sentences (since they are hard to understand)

Reference: NVDRS, 1.5 Incident Narrative CME and 1.6 Incident Narrative LE (NarrativeCME and NarrativeLE) – Modified

## Overdose Fatality Review Case Information

### A. County Profile

#### 1A) Case-unique identifier (REDCap generated)

Variable: record\_id

Question type: Automatically generated by REDCap

Definition: REDCap will generate a unique case ID.

Guidance: None

Reference: None

#### 2A) State in which OFR team is located

Variable: countyprofilestate

Question type: Select only one.

Definition: Indicates the state to which the county profile refers, also known as residence\_state in the Overdose Fatality Review Data Instrument.

Guidance: This helps link the correct county profile for the case. County profile and case record will be linked based on state and county.

Reference: None

#### 3A) County

Variable: countyprofile\_xx

Question type: Select only one.

Definition: Indicates the county to which the county profile refers, also known as residence\_county in the Overdose Fatality Review Data Instrument.

Guidance: This helps link the correct county profile for the case. County profile and case record will be linked based on state and county.

Reference: None

**4A) Date county profile updated**

Variable: countyprofiledate

Question type: Date entry

Definition: Indicates the date the profile was entered. The sources for the data are updated periodically.

Guidance: Document the date the profile is updated.

Reference: None

**5A) ODMPAP use**

Variable: countyodmap

Question type: Select only one.

Definition: Indicates the level of ODMAP reporting at the county level.

Guidance: Visit [www.odmap.org](http://www.odmap.org) and scroll down to the section on participating agencies. Select state and county.

Reference: Overdose Detection Mapping Application Program, [www.ODMAP.org](http://www.ODMAP.org)

---

**County Health Rankings**

**Variables 6A) – 26A)**

These variables “are based on a model of population health that emphasizes the many factors that, if improved, can help make communities healthier places to live, learn, work and play. By ranking the health of nearly every county in the nation, the County Health Rankings help communities understand what influences how healthy residents are and how long they will live.” Source: <https://www.countyhealthrankings.org/>

By searching the county health rankings website for the county, you can find the value for the following measures.

**6A) Percent rural**

Variable: countyrural

Question type: Text entry

Definition: Percentage of county population living in rural areas. Demographic variables are included as additional measures, since they provide background for understanding ranked measures while remaining relatively stable year to year.

Guidance: Enter the number without the % symbol. Percent Rural measures the percentage of the population that lives in a rural area.

Reference: County Demographics (at the top of the county Health Outcomes table)

<https://www.countyhealthrankings.org/>

### **7A) Life expectancy**

Variable: countylifeexpectancy

Question type: Text entry

Definition: Average number of years a person can expect to live. Life expectancy is a common and important population health outcome measure and can be easier to interpret than other mortality measures.

Guidance: Enter the number with one decimal place. Life Expectancy measures the average number of years from birth a person can expect to live, according to the current mortality experience (age-specific death rates) of the population. Life Expectancy accounts for the number of deaths in a given time period and the average number of people at risk of dying during that period, allowing us to compare data across counties with different population sizes.

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-outcomes/length-of-life/life-expectancy>

Reference: Health Outcomes, Length of Life (click on “Additional Health Outcomes”)

<https://www.countyhealthrankings.org/>

### **8A) Frequent physical distress (percent)**

Variable: countyphysicaldistress

Question type: Text entry

Definition: Percentage of adults reporting 14 or more days of poor physical health per month. Frequent physical distress is a corollary measure to poor physical health days. It provides a slightly different picture that emphasizes those who are experiencing more chronic, and likely severe, physical health issues.

Guidance: Enter the number without the % symbol. Frequent Physical Distress is the percentage of adults who reported 14 or more days in response to the question, “Thinking about your

physical health, which includes physical illness and injury, for how many days during the past 30 days was your physical health not good?"

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-outcomes/quality-of-life/frequent-physical-distress>

Reference: Quality of Life, Quality of Life (click on "Additional Health Outcomes")  
<https://www.countyhealthrankings.org/>

**9A) Frequent mental distress (percent)**

Variable: countymentaldistress

Question type: Text entry

Definition: Percentage of adults reporting 14 or more days of poor mental health per month. Frequent mental distress is a corollary measure to poor mental health days. It provides a slightly different picture that emphasizes those who are experiencing more chronic, and likely severe, mental health issues.

Guidance: Enter the number without the % symbol. Frequent Mental Distress is the percentage of adults who reported 14 or more days in response to the question, "Now, thinking about your mental health, which includes stress, depression, and problems with emotions, for how many days during the past 30 days was your mental health not good?"

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-outcomes/quality-of-life/frequent-mental-distress>

Reference: Quality of Life, Quality of Life (click on "Additional Health Outcomes")  
<https://www.countyhealthrankings.org/>

**10A) Food insecurity (percent)**

Variable: countyfoodinsecurity

Question type: Text entry

Definition: Percentage of the population that lacks adequate access to food. Lacking consistent access to food is related to negative health outcomes such as weight gain and premature mortality. In addition to asking about having a constant food supply in the past year, the measure addresses the ability of individuals and families to provide balanced meals, including fruits and vegetables, further addressing barriers to healthy eating.

Guidance: Enter the number without the % symbol. Food Insecurity estimates the percentage of the population that did not have access to a reliable source of food during the past year. <https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/health-behaviors/diet-exercise/food-insecurity>

Reference: Health Behaviors, Diet and Exercise (click on “Additional Health Behaviors”) <https://www.countyhealthrankings.org/>

### **11A) Drug overdose deaths**

Variable: countyoddeaths

Question type: Text entry

Definition: Number of drug poisonings deaths per 100,000 population. Drug overdose deaths are a leading contributor to premature death and are largely preventable. Currently, the United States is experiencing an epidemic of drug overdose deaths. Since 2000, the rate of drug overdose deaths has increased by 137 percent nationwide. Opioids contribute largely to drug overdose deaths; since 2000, there has been a 200 percent increase in deaths involving opioids (opioid pain relievers and heroin).

Guidance: Enter number which represents deaths per 100,000 population. Rates measure the number of events (e.g., deaths, births, etc.) in a given period (generally one or more years), divided by the average number of people at risk during that period. Rates help us compare health data across counties with different population sizes. Drug Overdose Deaths is the number of deaths due to drug poisoning per 100,000 population.

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/health-behaviors/alcohol-drug-use/drug-overdose-deaths>

Reference: Health Behaviors, Alcohol and Drug Use (click on “Additional Health Behaviors”) <https://www.countyhealthrankings.org/>

### **12A) Uninsured (percent)**

Variable: countyuninsured

Question type: Text entry

Definition: Percentage of the population under age 65 without health insurance. Lack of health insurance coverage is a significant barrier to accessing needed health care and to maintaining financial security. One key finding from the Kaiser Family Foundation report on access to health care is that "[g]oing without coverage can have serious health consequences for the uninsured because they receive less preventative care, and delayed care often results in serious illness or

other health problems. Being uninsured can also have serious financial consequences, with many unable to pay their medical bills, resulting in medical debt."

Guidance: Enter the number without the % symbol. Uninsured is the percentage of the population under age 65 without health insurance coverage. A person is uninsured if he or she is currently not covered by insurance through a current/former employer or union, insurance purchased from an insurance company, Medicare, Medicaid, medical assistance, any kind of government-assistance plan for those with low incomes or disability, TRICARE or other military health care, Indian Health Services, veterans' assistance, or any other health insurance or health coverage plan.

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/clinical-care/access-to-care/uninsured>

Reference: Clinical Care, Access to Care <https://www.countyhealthrankings.org/>

### **13A) Primary care physicians**

Variable: countyprimarycare

Question type: Text entry

Definition: Ratio of population to primary care physicians. Access to care requires not only financial coverage, but also access to providers. While high rates of specialist physicians have been shown to be associated with higher (and perhaps unnecessary) utilization, sufficient availability of primary care physicians is essential for preventive and primary care, and, when needed, referrals to appropriate specialty care.

Guidance: Enter the number to the left of the colon (number of persons in the population for each primary care physician). Primary Care Physicians is the ratio of the population to primary care physicians. The ratio represents the number of individuals who would be served by one physician in a county if the population were equally distributed among physicians. For example, if a county had a population of 50,000 and had 20 primary care physicians, its ratio would be 2,500:1. The value on the right side of the ratio is always 1 or 0; 1 indicates that there is at least one primary care physician in the county, and zero indicates there are no registered primary care physicians in the county.

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/clinical-care/access-to-care/primary-care-physicians>

Reference: Clinical Care, Access to Care <https://www.countyhealthrankings.org/>

### **14A) Mental health providers**

Variable: countymhproviders

Question type: Text entry

Definition: Ratio of population to mental health providers. Access to care requires not only financial coverage, but also access to providers. Thirty percent of the population lives in a county designated as a Mental Health Professional Shortage Area. As the mental health parity aspects of the Affordable Care Act create increased coverage for mental health services, many anticipate increased workforce shortages.

Guidance: Enter the number to the left of the colon (number of persons in the population for each mental health provider). Mental Health Providers is the ratio of the population to mental health providers. The ratio represents the number of individuals who would be served by one mental health provider in a county if the population were equally distributed across providers. For example, if a county had a population of 50,000 and had 20 mental health providers, its ratio would be 2,500:1. The value on the right side of the ratio is always 1 or 0; 1 indicates that there is at least one mental health provider in the county, and zero indicates there are no registered mental health providers in the county.

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/clinical-care/access-to-care/mental-health-providers>

Reference: Clinical Care, Access to Care <https://www.countyhealthrankings.org/>

### **15A) High School graduation (percent)**

Variable: countyhsgraduation

Question type: Text entry

Definition: Percentage of ninth-grade cohort that graduates in four years. Education is an important predictor of health. Completing more education is associated with being less likely to smoke and more likely to exercise, as well as better physical health and self-reported health.[1-3] Adults who are more educated are more often employed and tend to earn more than their less-well-educated counterparts.[3] A 1-point increase in high school GPA raises annual earnings in adulthood by about 12 percent in males and nearly 14 percent in females.[4]

Individuals graduating with a high school diploma are likely to have more health benefits than those who earn a Graduate Equivalency Diploma (GED). GED earners are about twice as likely to have worse self-reported health and physical limitations.[2]

It is important to note, as rates of high school and college completion increase, that there are growing race/ethnicity gaps in educational attainment over the past 20 years. In 2005, white recent high school graduates were 11 percentage points more likely to enroll in college than their black and Hispanic peers. In 2015, these gaps had decreased to 8 percentage points for black and 5 percentage points for Hispanic students.[3]

Guidance: Enter the number without the % symbol. High School Graduation is the percentage of the ninth-grade cohort that graduates from high school in four years.

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/social-and-economic-factors/education/high-school-graduation>

Reference: Social and Economic Factors, Education <https://www.countyhealthrankings.org/>

### **16A) Unemployment (percent)**

Variable: countyunemployment

Question type: Text entry

Definition: Percentage of the population aged 16 and older unemployed but seeking work. The unemployed population experiences worse health and higher mortality rates than the employed population.[1-4] Unemployment has been shown to lead to an increase in unhealthy behaviors related to alcohol and tobacco consumption, diet, exercise, and other health-related behaviors, which, in turn, can lead to increased risk for disease or mortality, especially suicide.[5] Because employer-sponsored health insurance is the most common source of health insurance coverage, unemployment can also limit access to health care.

Guidance: Enter the number without the % symbol. Unemployment is the percentage of the county's civilian labor force, aged 16 and older, that is unemployed but seeking work.

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/social-and-economic-factors/employment/unemployment>

Reference: Social and Economic Factors, Employment <https://www.countyhealthrankings.org/>

### **17A) Children in poverty (percent)**

Variable: countychildpoverty

Question type: Text entry

Definition: Percentage of people under age 18 in poverty. Children in Poverty captures an upstream measure of poverty that assesses both current and future health risk. Poverty and other social factors contribute a number of deaths comparable to leading causes of death in the United States, such as heart attacks, strokes, and lung cancer.[1] While repercussions resulting from poverty are present at all ages, children in poverty may experience lasting effects on academic achievement, health, and income into adulthood. Low-income children have an increased risk of injuries from accidents and physical abuse and are susceptible to more frequent and severe chronic conditions and their complications such as asthma, obesity, diabetes, ADHD, behavior disorders, cavities, and anxiety than children living in high-income households.[2-4]

Guidance: Enter the number without the % symbol. Children in Poverty is the percentage of people under age 18 living in poverty. <https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/social-and-economic-factors/income/children-in-poverty>

Reference: Social and Economic Factors, Income <https://www.countyhealthrankings.org/>

### **18A) Income inequality**

Variable: countyincomeinequality

Question type: Text entry

Definition: Ratio of household income at the 80th percentile to income at the 20th percentile. Income inequality within U.S. communities can have broad health impacts, including increased risk of mortality, poor health, and increased cardiovascular disease risks. Inequalities in a community can accentuate differences in social class and status and serve as social stressors. Communities with greater income inequality can experience a loss of social connectedness, as well as decreases in trust, social support, and a sense of community for all residents. Income inequality in a society has a strong causal connection to health, independent of the income of individuals.

Guidance: Income Inequality is the ratio of household income at the 80th percentile to that at the 20th percentile. In other words, when the incomes of all households in a county are listed from highest to lowest, the 80th percentile is the level of income at which only 20 percent of households have higher incomes, and the 20th percentile is the level of income at which only 20 percent of households have lower incomes. A higher inequality ratio indicates greater division between the top and bottom ends of the income spectrum.

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/social-and-economic-factors/income/income-inequality>

Reference: Social and Economic Factors, Income <https://www.countyhealthrankings.org/>

### **19A) Social associations (rate)**

Variable: countysocialassoc

Question type: Text entry

Definition: Number of membership associations per 10,000 population. Minimal contact with others and limited involvement in community life are associated with increased morbidity and early mortality. Research suggests that the magnitude of risk associated with social isolation is similar to the risk of cigarette smoking. Furthermore, social support networks have been identified as powerful predictors of health behaviors, suggesting that individuals without a

strong social network are less likely to make healthy lifestyle choices than individuals with a strong network. A study found that people living in areas with high levels of social trust are less likely to rate their health status as fair or poor than people living in areas with low levels of social trust. Researchers have argued that social trust is enhanced when people belong to voluntary groups and organizations because people who belong to such groups tend to trust others who belong to the same groups.

Guidance: Enter number which represents number of membership associations per 100,000 population. Social Associations measures the number of membership associations per 10,000 population. Rates measure the number of events in a given period (generally one or more years) divided by the average number of people at risk during that period. Rates help us compare health data across counties with different population sizes.

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/social-and-economic-factors/family-social-support/social-associations>

Reference: Social and Economic Factors, Family and Social Support

<https://www.countyhealthrankings.org/>

## **20A) Violent crime (rate)**

Variable: countyviolentcrime

Question type: Text entry

Definition: Number of reported violent crime offenses per 100,000 population. High levels of violent crime compromise physical safety and psychological well-being. High crime rates can also deter residents from pursuing healthy behaviors, such as exercising outdoors. In addition, exposure to crime and violence has been shown to increase stress, which may exacerbate hypertension and other stress-related disorders and may contribute to obesity prevalence. Exposure to chronic stress also contributes to the increased prevalence of certain illnesses, such as upper respiratory illness and asthma in neighborhoods with high levels of violence. Uniform Crime Reporting (UCR) data is generally regarded as a valid and reliable index of the types of crime that residents view as serious.

Guidance: Enter number which represents violent crimes per 100,000 population. Violent Crime is the number of violent crimes reported per 100,000 population. Rates measure the number of events (e.g., deaths, births) in a given period (generally one or more years) divided by the average number of people at risk during that period. Rates help us compare health data across counties with different population sizes. <https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/social-and-economic-factors/community-safety/violent-crime-rate>

Reference: Social and Economic Factors, Community Safety

<https://www.countyhealthrankings.org/>

**21A) Disconnected youth (percent)**

Variable: countydisconnectedyouth

Question type: Text entry

Definition: Percentage of teens and youth adults aged 16–19 who are neither working nor in school. Youth disconnection portrays a dynamic between individuals and the society they live in. Disconnected youth are at an increased risk of violent behavior, smoking, alcohol consumption, and marijuana use and may have emotional deficits and fewer cognitive and academic skills than their peers who are working and/or in school. Approximately one in nine teenagers and young adults in the United States is currently referred to as disconnected: not in education, employment, or training. Several studies have shown that disconnected youth have a disproportionate share of related health problems including chronic unemployment, poverty, mental health disorders, criminal behaviors, incarceration, poor health, and early mortality.

Guidance: Enter number without % symbol. Leave blank if a number is not provided in the County Health Ranking. Disconnected Youth is the percentage of teens and young adults aged 16 to 19 who are neither working nor in school.

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/social-and-economic-factors/education/disconnected-youth>

Reference: Social and Economic Factors, Education (click on “Additional Social & Economic Factors”) <https://www.countyhealthrankings.org/>

**22A) Median household income**

Variable: countymedianincome

Question type: Text entry

Definition: Median income—where half of the households in a county earn more and half of households earn less. Median household income is a well-recognized indicator of income and poverty, which can compromise physical and mental health. However, it is strongly correlated with children in poverty, which is already ranked and therefore not included as a ranked measure.

Guidance: Enter the number without the \$ symbol. Median Household Income is the income where half of households in a county earn more and half of households earn less. Income, defined as “Total income,” is the sum of the amounts reported separately for wage or salary income; net self-employment income; interest, dividends, or net rental or royalty income or income from estates and trusts; social security or railroad retirement income; Supplemental Security Income (SSI); public assistance or welfare payments; retirement, survivor, or disability pensions; and all other income. Receipts from the following sources are not included as income:

capital gains; money received from the sale of property (unless the recipient was engaged in the business of selling such property); the value of income “in kind” from food stamps, public housing subsidies, medical care, employer contributions for individuals, etc.; withdrawal of bank deposits; money borrowed; tax refunds; exchange of money between relatives living in the same household; and gifts and lump-sum inheritances, insurance payments, and other types of lump-sum receipts. <https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/social-and-economic-factors/income/median-household-income>

Reference: Social and Economic Factors, Income (click on “Additional Social & Economic Factors”) <https://www.countyhealthrankings.org/>

### **23A) Children eligible for free or reduced-price lunch (percent)**

Variable: countyfreelunch

Question type: Text entry

Definition: Percentage of children enrolled in public schools who are eligible for free or reduced-price lunch. Food insecurity and hunger are known to impair child development and increase risk of poor health outcomes.[1] The National School Lunch Program leads to substantial reductions in childhood food insecurity, poor health, and obesity.[2] Under the National School Lunch Act, eligible children (based on family size and income) receive adequate nutrition to help support development and a healthy lifestyle. In addition, eligibility for free or reduced-price lunch is a useful indicator of family poverty and its effect on children. When combined with poverty data, this measure can also be used to identify gaps in eligibility and enrollment.

Guidance: Enter the number without the % symbol. Children Eligible for Free or Reduced-Price Lunch is the percentage of children enrolled in public schools who are eligible for free or reduced-price lunch. <https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/social-and-economic-factors/income/children-eligible-for-free-or-reduced-price-lunch>

Reference: Social and Economic Factors, Income (click on “Additional Social & Economic Factors”) <https://www.countyhealthrankings.org/>

### **24A) Residential segregation – nonwhite/white**

Variable: countysegregation

Question type: Text entry

Definition: Index of dissimilarity where higher values indicate greater residential segregation between nonwhite and white county residents. Although most overtly discriminatory policies and practices promoting segregation—such as separate schools or seating on public

transportation or in restaurants based on race—have been illegal for decades, segregation caused by structural, institutional, and individual racism still exists in many parts of the country. The removal of discriminatory policies and practices has impacted acts of racism but has had little effect on structural racism such as residential segregation, resulting in lingering structural inequalities. Residential segregation is a key determinant of racial differences in socioeconomic mobility and, in addition, can create social and physical risks in residential environments that adversely affect health. Although this area of research is gaining interest, structural forms of racism and their relationship to health inequities remain understudied.

Residential segregation remains prevalent in many areas of the country and may influence both personal and community well-being. Residential segregation is considered a fundamental cause of health disparities in the United States and has been linked to poor health outcomes, including mortality; a wide variety of reproductive, infectious, and chronic diseases; and other adverse conditions. Structural racism is also linked to poor-quality housing and disproportionate exposure to environmental toxins. Individuals living in segregated neighborhoods often experience increased violence, reduced educational and employment opportunities, limited access to quality health care, and restrictions to upward mobility.

Guidance: Racial/ethnic residential segregation refers to the degree to which two or more groups live separately from one another in a geographic area. The index of dissimilarity is a demographic measure of the evenness with which two groups (non-White and White residents, in this case) are distributed across the component geographic areas (census tracts, in this case) that make up a larger area (counties, in this case).

The residential segregation index ranges from 0 (complete integration) to 100 (complete segregation). The index score can be interpreted as the percentage of either non-White or White residents who would have to move to different geographic areas to produce a distribution that matches that of the larger area.

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/social-and-economic-factors/family-social-support/residential-segregation-non-whitewhite>

Reference: Social and Economic Factors, Family and Social Support (click on “Additional Social & Economic Factors”) <https://www.countyhealthrankings.org/>

## **25A) Suicide (rate)**

Variable: countysuicide

Question type: Text entry

Definition: Number of deaths due to suicide per 100,000 population. Suicide serves as an important measure of the mental health of a county’s population. Outside of the impact on the emotional and mental health of surviving friends, family members, and loved ones, suicide also has an economic impact, costing the United States an estimated \$70 billion per year.

Guidance: Enter number which represents deaths due to suicide per 100,000 population. Suicide is the number of deaths from self-inflicted injuries per 100,000 population. Rates measure the number of events (e.g., deaths, births) in a given period (generally one or more years) divided by the average number of people at risk during that period. Rates help us compare data across counties with different population sizes.

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/social-and-economic-factors/community-safety/suicides>

Reference: Social and Economic Factors, Community Safety (click on “Additional Social & Economic Factors”) <https://www.countyhealthrankings.org/>

### **26A) Severe housing problems (percent)**

Variable: countyhousingprob

Question type: Text entry

Definition: Households with at least one of four housing problems: overcrowding, high housing costs, lack of kitchen facilities, or lack of plumbing facilities. Good health depends on having homes that are safe and free from physical hazards. When adequate housing protects individuals and families from harmful exposures and provides them with a sense of privacy, security, stability and control, it can make important contributions to health. In contrast, poor quality and inadequate housing contributes to health problems such as infectious and chronic diseases, injuries, and poor childhood development. Housing measures can also be considered proxy indicators of more general socioeconomic circumstances. Households experiencing severe cost burdens have to face difficult trade-offs in meeting other basic needs. When most of a paycheck goes toward the rent or mortgage, it is difficult to afford health insurance, health care and medication, healthy foods, utility bills, or reliable transportation to work or school. This, in turn, can lead to increased stress levels and emotional strain.

Guidance: Enter the number without the % symbol. Severe Housing Problems is the percentage of households with one or more of the following housing problems:

1. Housing unit lacks complete kitchen facilities.
2. Housing unit lacks complete plumbing facilities.
3. Household is overcrowded.
4. Household is severely cost-burdened.

<https://www.countyhealthrankings.org/explore-health-rankings/measures-data-sources/county-health-rankings-model/health-factors/physical-environment/housing-transit/severe-housing-problems>

Reference: Physical Environment, Housing and Transit <https://www.countyhealthrankings.org/>

## Overdose Fatality Review Recommendation Monitoring

### B. Recommendation Monitoring

#### **1B) Case-unique identifier (REDCap generated)**

Variable: record\_id

Question type: Automatically generated by REDCap

Definition: REDCap will generate a unique case ID.

Guidance: None

Reference: None

#### **2B) Public/edited version of recommendation**

Variable: rec\_text

Question type: Text entry

Definition: This is a short public-facing recommendation, modified over time based on case review.

Guidance: This recommendation does not include a lot of details or case information. It likely does not name/identify specific agencies or organizations that the recommendation is targeting.

Reference: None

#### **3B) Working draft of recommendation**

Variable: rec\_notes

Question type: Text entry

Definition: Original working recommendation text. Modified over time with more case details and specifics.

Guidance: This recommendation text is not public and is where specific agencies and/or organizations may be named.

Reference: None

**4B) Date recommendation was identified/initiated**

Variable: rec\_id\_date

Question type: Date entry

Definition: Indicates the date the recommendation was initially identified.

Guidance: The date of the case review that identified the recommendation. You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”).

Reference: None

**5B) Cases that generated or are related to the recommendation**

Variable: rec\_cases

Question type: Text entry

Definition: Indicates Case IDs (Var: case\_id) that relate to the recommendation. The cases may have helped identify or revise the recommendation.

Guidance: Any and all cases that helped inform the development of the recommendation.

Reference: None

**6B) What data sources were shared at review meetings?**

Variable: rec\_data\_type

Question type: Check all that apply.

Definition: Indicates which data were shared or provided at the case reviews.

Guidance: Select the responses that best describe the data sources shared at the review meetings tied to this recommendation, regardless of whether they provided data or information about the case. For example, if more than one case generated this recommendation, if the first case had behavioral health, criminal justice, and death certificate record information and the second case had behavioral health, criminal justice, death certificate, and social services record information, then the second case would only result in one additional data source at the meetings – social services record information. The total list of data sources tied to this recommendation would be behavioral health, criminal justice, death certificate, and social services record information.

Reference: None

**6Ba) Specify “Other”**

Variable: rec\_data\_type\_othr

Question type: Text entry

Definition: Specifies other type of data source shared at review meetings.

Guidance: None

Reference: None

**7B) What OFR members were present/represented at the review meetings?**

Variable: rec\_member type

Question type: Check all that apply.

Definition: Indicates OFR members or partners (guest participants) present at the meetings.

Guidance: Select the responses that best describe those present at the cases reviewed that tied to this recommendation, regardless of whether they provided data or information about the case. For example, if more than one case generated this recommendation, if the first case had public health, hospital, prisons, and local law enforcement and the second case had public health, hospital, local law enforcement, and substance use disorder treatment provider, then the second case would only result in one additional member at the meetings – substance use disorder treatment provider. The total list of members tied to this recommendation would be public health, hospital, prison, local law enforcement and substance use disorder treatment provider.

Note: OFR teams may want a meeting sign-in form that allows participants to select which professional sector they represent.

Reference: None

**7Ba) Specify “Other”**

Variable: rec\_member\_type\_othr

Question type: Text entry

Definition: Specifies other OFR member present/represented at the review meetings.

Guidance: None

Reference: None

**8B) Recommendation type**

Variable: rec\_type

Question type: Check all that apply.

Definition: Indicates type of recommendation.

Guidance:

- Quality improvement—Addresses an issue to strengthen or improve the overdose fatality review process. For example, increase the length of meetings to allow for more time to develop recommendations.
- Systemic—Addresses a gap, weakness, or problem within a system or across systems. For example, improve communication between inpatient treatment providers upon discharge to an outpatient, medication-assisted therapy (MAT) provider by establishing an automated alert system.
- Case-specific—Addresses an information or data need related to a case. For example, determine whether an individual was seen by the VA hospital in the week prior to the death.
- Agency-specific—Addresses a service gap or failure within an agency. For example, improve internal records and communication to better track and follow up with patients who miss appointments.
- Population-specific—Addresses a need or issue to reduce a specific risk factor for overdose. For example, increase access to buprenorphine among incarcerated populations.
- Research-related—Addresses a need to research a topic of issue area. For example, determine the number of deaths from prescription opioids for those who had prescriptions for opioids.
- Capacity-building—Addresses methods for sharing knowledge, developing skills, and creating institutional systems and capacity by providing training, technical consultation and services, information packaging, and dissemination and technology transfer activities. For example, improve public health data and information systems to better count and monitor drug use and overdoses (nonfatal and fatal).

Reference: U.S. Centers for Disease Control and Prevention, Public Health Professional Gateway, Building Capacity. <https://www.cdc.gov/publichealthgateway/funding/rfaot13.html> (define capacity building)

**8Ba) Specify “Other”**

Variable: rec\_type\_othr

Question type: Text entry

Definition: Specifies other type of recommendation.

Guidance: None

Reference: None

### **9B) Prevention level**

Variable: rec\_level

Question type: Check all that apply.

Definition: Indicates the scope and level of prevention the recommendation addresses.

Guidance:

- **Primary/Universal:** Primary prevention or universal prevention efforts are efforts that prevent an overarching circumstance or increase health-promoting supports. The target audience is the public. For example, increasing access to affordable housing or preventing the initiation of substance use in a community.
- **Secondary/Selective:** Secondary prevention or selective prevention efforts are efforts that address an immediate circumstance leading up to the overdose death. The target audience is individuals and/or groups who are at increased risk. For example, increasing access among drug users and their social network to naloxone.
- **Tertiary/Targeted:** Tertiary prevention or targeted prevention efforts are efforts that decrease the impact of ongoing addiction or substance use disorder. The target audience is individuals who are already affected by the disease or outcome. For example, connecting nonfatal overdose victims in emergency departments with peer recovery coaches to identify treatment options.

Reference: None

### **10B) Focus population or issue**

Variable: rec\_focus

Question type: Check all that apply.

Definition: Indicates the population or issue the recommendation is targeting.

Guidance: None

Reference: None

**10Ba) Specify “Other”**

Variable: rec\_focus\_othr

Question type: Text entry

Definition: Specifies other focus population or issue.

Guidance: None

Reference: None

**11B) Jurisdictional levels responsible for implementing the recommendation**

Variable: rec\_jurisd\_scope

Question type: Check all that apply.

Definition: Identify which level of jurisdiction is responsible for implementing each recommendation.

Guidance: Each type of recommendation must be implemented at different jurisdiction levels.

Reference: None

**12B) Agencies responsible for implementation**

Variable: rec\_agency

Question type: Check all that apply.

Definition: Indicates the agencies responsible for implementing the recommendation.

Guidance: None

Reference: None

**12Ba) Specify “Other”**

Variable: rec\_agency\_othr

Question type: Text entry

Definition: Specifies other agency responsible for implementing the recommendation.

Guidance: None

Reference: None

**13B) Recommendation status**

Variable: rec\_status

Question type: Select only one.

Definition: Indicates current status on recommendation.

Guidance: Update status of recommendation when updating recommendation.

Reference: None

**14B) Date of status update**

Variable: rec\_status\_date

Question type: Date entry

Definition: Indicates the date of the most recent status update.

Guidance: You must enter “MM” and “DD” as two-digit numbers (e.g., “06” for June, not “6”).

Reference: None

**15B) Short-term strategies**

Variable: rec\_short, rec\_short\_2, rec\_short\_3, rec\_short\_4, rec\_short\_5

Question type: Text entry

Definition: List short-term strategies to be implemented.

Guidance: Add and update strategies as they are identified or happen. Enter one strategy per field.

Reference: Social and Economic Factors, Income <https://www.countyhealthrankings.org/>

**16B) Medium-term strategies**

Variable: rec\_medium, rec\_medium\_2, rec\_medium\_3, rec\_medium\_4, rec\_medium\_5

Question type: Text entry

Definition: List medium-term strategies to be implemented.

Guidance: Add and update strategies as they are identified or happen. Enter one strategy per field.

Reference: None

**17B) Long-term strategies**

Variable: rec\_long, rec\_long\_2, rec\_long\_3, rec\_long\_4, rec\_long\_5

Question type: Text entry

Definition: List the long-term strategies to be implemented.

Guidance: Add and update strategies as they are identified or happen. Enter one strategy per field.

Reference: Social and Economic Factors, Family and Social Support  
<https://www.countyhealthrankings.org/>

**18B) Recommendation accomplishments**

Variable: rec\_results

Question type: Text entry

Definition: Document tasks completed and associated results.

Guidance: Add and update the list of tasks and results as they happen.

Reference: None

**19B) Media coverage notes**

Variable: rec\_media

Question type: Text entry

Definition: Track any media coverage regarding this recommendation and related activities and cases.

Guidance: Update with media coverage and content as it happens.

Reference: Social and Economic Factors, Education (click on “Additional Social & Economic Factors”) <https://www.countyhealthrankings.org/>

**20B) Contact information for agency that has the lead responsibility for implementing the recommendation**

Variable: rec\_lead

Question type: Text entry

Definition: Indicates the lead responsible agency for implementing the recommendation.

Guidance: Examples include name, agency and email address.

Reference: None

**21B) Supporting agencies**

Variable: rec\_support, rec\_support\_2, rec\_support\_3

Question type: Text entry

Definition: Indicates an individual or agency responsible for supporting the recommendation implementation.

Guidance: Examples include name, agency and email address. Enter information for one agency per field.

Reference: None

## Overdose Fatality Review Case Information

Section 1 – OFR Administration						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
case_id	text	REDCap-generated unique case identifier	--	None	No	1.0
contact_name	text	Name of person completing this form	--	None	No	1.0
contact_email	text (email)	Email address of the person completing this form	--	None	No	1.0
form_date	date	Date completing this form	--	None	No	1.0
review_date	date	Date case was reviewed in the OFR	09-09-9999 if exact date is not known	None	No	1.0
case_criteria	categorical	Criterion used to select case the case to review	0, No criteria 1, Most recent deaths 2, Random selection 3, Selected to match characteristics of overall fatalities 4, Theme review 88, Other	None	No	1.0
case_criteria_theme	text	Specifies the type of theme review	--	case_criteria = 4 (theme review)	No	1.0
case_criteria_othr	text	Specifies the other type of case criteria used to select the case to review	--	case_criteria = 88 (other)	No	1.0
data_type___1	binary	Data source, behavioral health record information	0, Unchecked 1, Checked	None	No	1.0
data_type___2	binary	Data source, criminal justice record information	0, Unchecked 1, Checked	None	No	1.0
data_type___3	binary	Data source, death certificate record information	0, Unchecked 1, Checked	None	No	1.0
data_type___4	binary	Data source, family and social network information	0, Unchecked 1, Checked	None	No	1.0
data_type___5	binary	Data source, forensic record information	0, Unchecked 1, Checked	None	No	1.0
data_type___6	binary	Data source, medical care record information	0, Unchecked 1, Checked	None	No	1.0

Section 1 – OFR Administration						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
data_type___7	binary	Data source, prescription drug monitoring program (PDMP) record information	0, Unchecked 1, Checked	None	No	1.0
data_type___8	binary	Data source, social services record information	0, Unchecked 1, Checked	None	No	1.0
data_type___88	binary	Data source, other	0, Unchecked 1, Checked	None	No	1.0
data_type_othr	text	Specifies the other source of data source shared at the meeting	--	data_type_othr = 1 (checked)	No	1.0
member_type___1	binary	Member type, child protective services	0, Unchecked 1, Checked	None	No	1.0
member_type___2	binary	Member type, community corrections-probation and parole	0, Unchecked 1, Checked	None	No	1.0
member_type___3	binary	Member type, community prevention coalition	0, Unchecked 1, Checked	None	No	1.0
member_type___4	binary	Member type, county sheriff's office	0, Unchecked 1, Checked	None	No	1.0
member_type___5	binary	Member type, court (not drug-related)	0, Unchecked 1, Checked	None	No	1.0

Section 2 – Decedent Demographic Information						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
first_name	text	Decedent's first name	--	None	Yes	1.0
last_name	text	Decedent's last name	--	None	Yes	1.0
decedent_dob	date	Decedent's date of birth	09-09-9999 if exact date is not known	None	Yes	1.0
decedent_dob_app	text	Decedent's approximate DOB	---	decedent_dob = '09-09-9999'	Yes	1.0
age_years	numeric	Age in years	Integer Range 1–120	None	No	1.0
birth_state	categorical	Birth state/territory	See Appendix A for state codes. 777, Not applicable, was not born in the United States 999, Unknown	None	No	1.0

Section 2 – Decedent Demographic Information						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
birth_country	categorical	Country, other than United States, where decedent was born	---	birth_state = 777 (Not applicable, was not born in United States)	No	1.0
residence_state	categorical	State in which decedent lived	See Appendix A for state codes. 777, Not applicable, decedent did not live in the United States 999, Unknown	None	No	1.0
residence_county_xx	categorical	County of residence	See Appendix B for county codes. 777, Not applicable 999, Unknown	residence_state = 'xx'	No	1.0
residence_city	text	City of residence	--	residence_state ≠ 777 and resident_state ≠ 999	Yes	1.0
residence_zip	text (zipcode)	Residence ZIP code	---	residence_state ≠ 777 and resident_state ≠ 999	Yes	1.0
residence_street	text	Street address of residence	---	residence_state ≠ 777 and resident_state ≠ 999	Yes	1.0
homeless	categorical	Known homeless at time of death	0, No 1, Yes, "couch surfing" or residing in motel or hotel 2, Yes, sleeping outdoors or in a shelter or transitional housing program 3, Yes, unknown where sleeping	None	No	1.0
sex	categorical	Sex of decedent	1, Female 2, Male 99, Unknown	None	No	1.0
pregnancy_status	categorical	Pregnancy status	0, Not pregnant within last year 1, Pregnant at time of death 2, Not pregnant but pregnant within 42 days of death 3, Not pregnant but pregnant 43 days to 1 year before death 4, Not pregnant, not otherwise specified 99, Unknown if pregnant within past year	sex = 1 (Female)	No	1.0

Section 2 – Decedent Demographic Information						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
prenatal_services	binary	Known access to prenatal services	0, No 1, Yes	pregnancy_status = 1 or 2 or 3	No	1.0
gender_identity	categorical	Gender identity	1, Cisgender, not transgender 2, Genderqueer/gender nonconforming, neither exclusively male or female 3, Transgender man/trans man/female-to-male (FTM) 4, Transgender woman/trans woman/male-to-female (MTF) 88, Other 99, Unknown	None	No	1.0
gender_identity_othr	text	Specify "Other"	--	gender_identity = 88 (other)	No	1.0
relationship_status	categorical	Relationship status at time of incident	1, Currently in a relationship 2, Not currently in a relationship 99, Unknown	None	No	1.0
partner_sex	categorical	Sex of partner	1, Opposite sex of decedent 2, Same sex as decedent 77, Not applicable 99, Unknown	relationship_status = 1	No	1.0
marital_status	categorical	Marital status	1, Divorced 2, Married / Civil Union / Domestic Partnership 3, Married / Civil Union / Domestic Partnership, but separated 4, Never married 5, Single, not otherwise specified 6, Widowed 99, Unknown	None	No	1.0
sexual_orientation	categorical	Sexual orientation	1, Bisexual 2, Gay 3, Heterosexual 4, Lesbian 99, Unknown	None	No	1.0

Section 2 – Decedent Demographic Information						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
race__1	binary	Race, American Indian or Alaska native	0, Unchecked 1, Checked	None	No	1.0
race__2	binary	Race, Asian	0, Unchecked 1, Checked	None	No	1.0
race__3	binary	Race, Black or African American	0, Unchecked 1, Checked	None	No	1.0
race__4	binary	Race, Native Hawaiian or other Pacific Islander	0, Unchecked 1, Checked	None	No	1.0
race__5	binary	Race, White	0, Unchecked 1, Checked	None	No	1.0
race__88	binary	Race, Other	0, Unchecked 1, Checked	None	No	1.0
race__99	binary	Race, Unknown or unspecified	0, Unchecked 1, Checked	None	No	1.0
race_othr	text	Specify "Other"	--	race__88 = 1 (Checked)	No	1.0
tribal_status	binary	Verified tribal status	0, No 1, Yes	None	No	1.0
tribal_status_sp	text	Specify tribe	--	tribal_status = 1 (Yes)	No	1.0
hispanic_ethnicity	categorical	Hispanic/Latino/Spanish ethnicity	0, Not Hispanic or Latino 1, Hispanic or Latino 9, Unknown	None	No	1.0
english_language	categorical	English speaker	0, No 1, Yes, English was decedent's primary language 2, Yes, English was not decedent's primary language 9, Unknown	None	No	1.0
english_language_sp	text	Specify decedent's primary language	--	english_language = 0 or 2	No	1.0
military	binary	Known service in U.S. armed forces	0, No 1, Yes	None	No	1.0
occupation_text	text	Usual occupation	--	None	No	1.0
current_occupation	categorical	Occupation status at time of death	1, Disabled 2, Employed 3, Homemaker 4, Retired	None	No	1.0

Section 2 – Decedent Demographic Information						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
			5, Self-employed 6, Student 7, Unemployed 77, Not Applicable (under age 14) 99, Unknown			
occupation_sp	text	Specify decedent's current occupation	--	current_occupation = 2 (Employed)	No	1.0
education_level	categorical	Highest education obtained	0, 8th grade or less 1, 9th to 12th grade; no diploma 2, High school graduate or GED (graduate equivalent diploma) completed 3, Some college credit but no degree 4, Associate's degree (e.g., A.A., A.S.) 5, Bachelor's degree (e.g., B.A., A.B., B.S.) 6, Master's degree (e.g., M.A., M.S., Mend, Med, M.S.W., M.B.A.) 7, Doctorate (e.g., Ph.D., Ed.D.) or professional degree (e.g., M.D., D.D.S., D.V.M., L.L.B., J.D.) 99, Unknown	None	No	1.0
disability_status___0	binary	Known disability at time of overdose incident, None	0, Unchecked 1, Checked	None	No	1.0
disability_status___1	binary	Known disability, Yes, developmental delay	0, Unchecked 1, Checked	None	No	1.0
disability_status___2	binary	Known disability, Yes, physical disability	0, Unchecked 1, Checked	None	No	1.0
disability_status___3	binary	Known disability, Yes, sensory disability	0, Unchecked 1, Checked	None	No	1.0
disability_status___4	binary	Known disability, Yes, unknown type of disability	0, Unchecked 1, Checked	None	No	1.0

Section 2 – Decedent Demographic Information						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
children	categorical	Decedent had children under 18 at time of overdose incident	0, No 1, Yes 99, Unknown	None	No	1.0
demo_notes	text	Notes (for site use only)	--	None	No	1.0
decedent_demographic_information_complete	categorical	Complete?	0, Incomplete 1, Unverified 2, Complete		No	1.0

Section 3 – Cause of Death						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
death_cause	text	ICD-10 code for cause of death	--	None	No	1.0
death_cause_1	text	Immediate cause of death (Part 1a death certificate)	--	None	No	1.0
death_cause_2	text	Condition listed in b (death certificate)	--	None	No	1.0
death_cause_3	text	Condition listed in c (death certificate)	--	None	No	1.0
death_cause_4	text	Condition listed in d (death certificate)	--	None	No	1.0
significant_conditions	text	Other significant conditions contributing to death (death certificate)	--	None	No	1.0
how_overdose	text	How the injury [overdose] occurred	--	None	No	1.0
death_manner	categorical		1, Natural 2, Accident 3, Suicide 4, Homicide 5, Undetermined 6, Pending 7, Legal intervention 99, Record not available or blank		No	1.0

Section 3 – Cause of Death						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
cod_notes	text	Notes (for site use only)	--	None	No	1.0
cause_of_death_complete	categorical	Complete?	0, Incomplete 1, Unverified 2, Complete		No	1.0

Section 4 – Scene of Overdose and Death						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
overdose_location	categorical	Location of overdose incident	1, Decedent's residence 2, Friend/acquaintance's residence 3, Hospice facility 4, Hospital 5, Hotel or motel 6, Jail, prison, or detention facility 7, Licensed foster care home 8, Motor vehicle 9, Nursing home/long-term care facility 10, Park, playground, or public use area 11, Relative's residence 12, Residential living facility (shelter, halfway house, sober-living facility, recovery housing, etc.) 13, School 14, Street/road/sidewalk/alley (not in vehicle) 15, Substance use disorder or mental health inpatient treatment program 88, Other	None	No	1.0
overdose_location_othr	text	Specify other location type for overdose incident	--	overdose_location = 88 (Other)	No	1.0

Section 4 – Scene of Overdose and Death						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
overdose_state	categorical	State of overdose incident	See Appendix A 777, Not applicable 999, Unknown	None	No	1.0
overdose_county_xx	categorical	County of overdose incident	See Appendix B for county codes. 777, Not applicable 999, Unknown	overdose_state = xx	No	1.0
overdose_city	text	City of overdose incident	--	overdose_state ≠ 777 and overdose_state ≠ 999	Yes	1.0
overdose_zip	text (zipcode)	ZIP code of overdose incident	--	overdose_state ≠ 777 and overdose_state ≠ 999	Yes	1.0
overdose_address	text	Street address of overdose incident	--	overdose_state ≠ 777 and overdose_state ≠ 999	Yes	1.0
overdose_death_location	categorical	Indicates if location of overdose death differs from overdose incident	0, No 1, Yes 99, Unknown	None	No	1.0
death_location	categorical	Location of death	1, Decedent's residence 2, Friend/acquaintance's residence 3, Hospice facility 4, Hospital 5, Hotel or motel 6, Jail, prison, or detention facility 7, Licensed foster care home 8, Motor vehicle 9, Nursing home/long-term care facility 10, Park, playground, or public use area 11, Relative's residence 12, Residential living facility (shelter, halfway house, sober-living facility, recovery housing, etc.) 13, School 14, Street/road/sidewalk/alley (not in vehicle)	overdose_death_location = 1 (Yes)	No	1.0

Section 4 – Scene of Overdose and Death						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
			15, Substance use disorder or mental health inpatient treatment program 88, Other			
death_location_othr	text	Specify other location type for overdose death	--	death_location = 88 (Other)	No	1.0
death_state	categorical	State of overdose death	See Appendix A 777, Not applicable, was not born in the United States 999, Unknown	overdose_death_location = 1 (Yes)	No	1.0
death_county_xx	categorical	County of overdose death	See Appendix B for county codes. 777, Not applicable 999, Unknown	death_state = xx	No	1.0
death_city	text	City of overdose death	--	death_state ≠ 777 and death_state ≠ 999	Yes	1.0
death_zip	text (zipcode)	ZIP code of overdose death	--	death_state ≠ 777 and death_state ≠ 999	Yes	1.0
death_address	text	Street address of overdose death	--	death_state ≠ 777 and death_state ≠ 999	Yes	1.0
last_alive_date	date	Date last known alive before overdose	09-09-9999 if exact date is not known	None	No	1.0
last_alive_date_app	text	Approximate date last known alive	--	last_alive_date = '09-09-9999'	No	1.0
overdose_date	date	Date of overdose incident	09-09-9999 if exact date is not known	None	No	1.0

Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
education_history__0	binary	School problems history, No	0, Unchecked 1, Checked	None	No	1.0
education_history__1	binary	School problems history, Decreased academic performance/achievement or non-passing grades	0, Unchecked 1, Checked	None	No	1.0

Section 16 – Education History						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
education_history__2	binary	School problems history, Disciplinary problems at school (such as detention or suspension)	0, Unchecked 1, Checked	None	No	1.0
education_history__3	binary	School problems history, Discontinuation of school and did not receive a GED	0, Unchecked 1, Checked	None	No	1.0
education_history__4	binary	School problems history, Social exclusion	0, Unchecked 1, Checked	None	No	1.0
education_history__5	binary	School problems history, Truancy or absenteeism	0, Unchecked 1, Checked	None	No	1.0
education_stressors__0	binary	Education stressor, None	0, Unchecked 1, Checked	Education_history__0 ≠ 1 (checked)	No	1.0
education_stressors__1	binary	Education stressor, Decreased academic performance/achievement or non-passing grades	0, Unchecked 1, Checked	Education_history__0 ≠ 1 (checked)	No	1.0
education_stressors__2	binary	Education stressor, Disciplinary problems at school (such as detention or suspension)	0, Unchecked 1, Checked	Education_history__0 ≠ 1 (checked)	No	1.0
education_stressors__3	binary	Education stressor, Discontinuation of school and did not receive a GED	0, Unchecked 1, Checked	Education_history__0 ≠ 1 (checked)	No	1.0
education_stressors__4	binary	Education stressor, Social exclusion	0, Unchecked 1, Checked	Education_history__0 ≠ 1 (checked)	No	1.0
education_stressors__5	binary	Education stressor, Truancy or absenteeism	0, Unchecked 1, Checked	Education_history__0 ≠ 1 (checked)	No	1.0
education_stressors__77	binary	Education stressor, Not applicable, not school-aged or going to school as an adult	0, Unchecked 1, Checked	Education_history__0 ≠ 1 (checked)	No	1.0
educ_notes	text	Notes (for site use only)	--	None	No	1.0
education_history_complete	categorical	Complete?	0, Incomplete 1, Unverified 2, Complete	None	No	1.0

Section 17 – Recommendations						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
recommend_identified	binary	Review of case identified recommendations	0, No 1, Yes	None	No	1.0
recommend_1	text	Brief description of initial recommendation	--	recommend_identified = 1 (Yes)	No	1.0
recommend_strategy_1__1	binary	Recommendation strategy, Access to care/treatment	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0
recommend_strategy_1__2	binary	Recommendation strategy, Care coordination, referral, and follow-up	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0
recommend_strategy_1__3	binary	Recommendation strategy, Community coalition/collaboration	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0
recommend_strategy_1__4	binary	Recommendation strategy, Criminal justice/law enforcement intervention	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0
recommend_strategy_1__5	binary	Recommendation strategy, Data and statistics	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0
recommend_strategy_1__6	binary	Recommendation strategy, Death and law enforcement investigation	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0
recommend_strategy_1__7	binary	Recommendation strategy, Grief/loss support	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0
recommend_strategy_1__8	binary	Recommendation strategy, Harm reduction	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0
recommend_strategy_1__9	binary	Recommendation strategy, Information/data sharing	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0
recommend_strategy_1__10	binary	Recommendation strategy, Naloxone	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0
recommend_strategy_1__11	binary	Recommendation strategy, Prescription Drug Monitoring Program (PDMP)	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0
recommend_strategy_1__12	binary	Recommendation strategy, Prevention education/awareness	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0

Section 17 – Recommendations						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
recommend_strategy_1__1 3	binary	Recommendation strategy, Social determinants of health (e.g., housing stability)	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0
recommend_strategy_1__8 8	binary	Recommendation strategy, Other	0, Unchecked 1, Checked	recommend_1 ≠ ""	No	1.0
recommend_strat_1_othr	text	Specifies other recommendation strategy	--	recommend_strategy_1__8 8 = 1 (Checked)	No	1.0
recommend_jurisdiction_1_ __1	binary	Responsible jurisdiction,	0, Unchecked 1, Checked	recommend_1-4 ≠ ""	No	1.0
recommend_jurisdiction_1_ __2	binary	Responsible jurisdiction,	0, Unchecked 1, Checked	recommend_1-4 ≠ ""	No	1.0
recommend_jurisdiction_1_ __3	binary	Responsible jurisdiction,	0, Unchecked 1, Checked	recommend_1-4 ≠ ""	No	1.0
recommend_jurisdiction_1_ __4	binary	Responsible jurisdiction,	0, Unchecked 1, Checked	recommend_1-4 ≠ ""	No	1.0
recommend_another	binary	Did case generate another recommendation	0, No 1, Yes	recommend_1-4 ≠ ""	No	1.0
<i>Variable sequence repeats for up to four additional recommendations.</i>						
recom_notes	text	Notes (for site use only)	--	None	No	1.0
recommendations_complete	categorical	Complete?	0, Incomplete 1, Unverified 2, Complete	None	No	1.0

Section 18 – Case-Specific Community Context						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
community_state	binary	Review of case identified recommendations	0, No 1, Yes	None	No	1.0
comm_level	categorical	Level of community for which questions will be answered	1, County 2, City 3, Neighborhood 4, ZIP code	None	No	1.0
community_county_xx	categorical	County in which decedent lived	See Appendix B for county codes. 777, Not applicable 999, Unknown	community_state = 'xx' and comm_level = 1	No	1.0

<b>Section 18 – Case-Specific Community Context</b>						
<b>Variable name</b>	<b>Type</b>	<b>Description</b>	<b>Response options</b>	<b>Skip logic</b>	<b>Identifier?</b>	<b>Version</b>
community_city	text	City in which decedent lived	--	comm_level = 2	No	1.0
community_neighborhood	text	Neighborhood in which decedent lived	--	comm_level = 3	No	1.0
community_zip	text (zipcode)	ZIP code in which decedent lived	--	comm_level = 4	No	1.0
multiple_data	binary	Community has access to and monitors multiple data sources to guide prevention and intervention planning and strategies	0, No 1, Yes	None	No	1.0
naloxone_distribution	binary	Community has a targeted naloxone distribution program	0, No 1, Yes	None	No	1.0
response_plan	binary	Community has a coordinated rapid response team/plan to respond to spikes in overdoses, overdose-related events, or emerging drug trends	0, No 1, Yes	None	No	1.0
high_density	binary	Community considered a high-density-use and/or high-density-overdose area	0, No 1, Yes	None	No	1.0
mat_available	categorical	Extent MAT (medication-assisted treatment) is available in the community	0, Not available 1, Limited availability—waiting lists, limited providers, only one type available 2, Adequate availability—no waiting lists, easy access to all types of MAT	None	No	1.0
mat_cj	categorical	Extent MAT (medication-assisted treatment) is available to individuals upon release from jails or pre-trial detention	0, Not available 1, Limited availability—limited number of facilities, limited types of MAT or specific populations (e.g., pregnant women) 2, Adequate availability—all types of MAT for all populations	None	No	1.0

Section 18 – Case-Specific Community Context						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
mat_ed	categorical	Extent buprenorphine-based MAT (medication-assisted treatment) is initiated in local emergency departments	0, Not initiated 1, Limited availability/initiation—limited number of facilities or specific populations (e.g., pregnant women) 2, Adequate availability/initiation—buprenorphine-based MAT for all populations, standard practice among local emergency departments	None	No	1.0
syringe_service	categorical	Extent syringe service programs are available in the community	0, Not available 1, Limited availability—not enough supplies/staff, only in part of the community, only targeting specific populations (e.g., homeless population), or one-for-one exchange policies 2, Adequate availability—entire community and population can access program as needed	None	No	1.0
follow_up	categorical	Extent wraparound follow-up care is available after a nonfatal overdose	0, Not available 1, Limited availability—only in part of the community, only targeting specific populations 2, Adequate availability—entire community and population offered wraparound follow-up care	None	No	1.0
naloxone_sud	categorical	Extent naloxone is available among substance use disorder treatment providers	0, Not available 1, Limited availability—limited providers, targeting only specific populations 2, Adequate availability—a standard practice among providers in the community	None	No	1.0

Section 18 – Case-Specific Community Context						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
naloxone_cj	categorical	Extent naloxone is available in criminal justice facilities (for example, courts, jails, and probation)	0, Not available 1, Limited availability—limited locations, targeting only specific populations 2, Adequate availability—a standard practice among area criminal justice system facilities	None	No	1.0
naloxone_le	categorical	Extent naloxone is available and used by law enforcement and other first responders?	0, Not available 1, Limited availability—limited agencies, limited officers/staff 2, Adequate availability—a standard practice among law enforcement and other first responders	None	No	1.0
policy_changes	binary	Any significant overdose prevention-related policy changes in the community, three months prior to death	0, No 1, Yes	None	No	1.0
prevention_funds	binary	Any significant overdose prevention-related funds awarded to the community, three months prior to death	0, No 1, Yes	None	No	1.0
prevention_funds_lost	binary	Any significant overdose prevention-related funds lost to the community, three months prior to death	0, No 1, Yes	None	No	1.0
elected_officials	binary	Any changes in elected officials in the community, three months prior to death	0, No 1, Yes	None	No	1.0
high_profile_od	binary	Any high-profile overdoses in the community in the 14 days prior to death	0, No 1, Yes	None	No	1.0
od_batch_spike	binary	Death possibly connected or related to a contaminated/tainted batch or a community spike in overdoses	0, No 1, Yes	None	No	1.0

Section 18 – Case-Specific Community Context						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
context_notes	text	Notes (for site use only)	--	None	No	1.0
casespecific_community_con text_complete	categorical	Complete?	0, Incomplete 1, Unverified 2, Complete	None	No	1.0

Section 19– Site-Specific Variable						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version

Section 20– Narrative Section						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
narrative	text	Brief narrative	250-word limit	None	No	1.0
narrative_section_complete	categorical	Complete?	0, Incomplete 1, Unverified 2, Complete	None	No	1.0

## Overdose Fatality Review County Profile

Section A—County Profile						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
record_id	text	REDCap-generated unique case identifier	--	None	No	1.0
countyprofilestate	categorical	State in which OFR team is located	See Appendix A for state codes.	None	No	1.0
countyprofile_xx	categorical	County in which OFR team is located	See Appendix B for county codes. 777, Not applicable 999, Unknown	countyprofilestate = 'xx'	No	1.0
countyprofiledate	date	Date profile was entered	--	None	No	1.0
countyodmap	numeric	Level of ODMAP reporting at the county level	--	None	No	1.0
countyrural	numeric	Percentage of county population living in rural areas	--	None	No	1.0
countylifeexpectancy	numeric	Average number of years a person can expect to live	--	None	No	1.0
countyphysicaldistress	numeric	Percentage of adults reporting 14 or more days of poor physical health per month	--	None	No	1.0
countymentaldistress	numeric	Percentage of adults reporting 14 or more days of poor mental health per month	--	None	No	1.0
countyfoodinsecurity	numeric	Percentage of the population that lacks adequate access to food	--	None	No	1.0
countyoddeaths	numeric	Number of drug poisonings deaths per 100,000 population	--	None	No	1.0
countyuninsured	numeric	Percentage of the population under age 65 without health insurance	--	None	No	1.0
countyprimarycare	numeric	Ratio of population to primary care physicians	--	None	No	1.0
countymhmproviders	numeric	Ratio of population to mental health providers	--	None	No	1.0
countyhsgraduation	numeric	Percentage of ninth-grade cohort that graduates in four years	--	None	No	1.0
countyunemployment	numeric	Percentage of the population aged 16 and older unemployed but seeking work	--	None	No	1.0

Section A—County Profile						
countychildpoverty	numeric	Percentage of people under age 18 in poverty	--	None	No	1.0
countyincomeinequality	numeric	Ratio of household income at the 80th percentile to income at the 20th percentile	--	None	No	1.0
countysocialassoc	numeric	Number of membership associations per 10,000 population	--	None	No	1.0
countyviolentcrime	numeric	Number of reported violent crime offenses per 100,000 population	--	None	No	1.0
countydisconnectedyouth	numeric	Percentage of teens and youth adults aged 16–19 who are neither working nor in school	--	None	No	1.0
countymedianincome	numeric	Median income—where half of the households in a county earn more and half of households earn less	--	None	No	1.0
countyfreelunch	numeric	Percentage of children enrolled in public schools who are eligible for free or reduced-price lunch	--	None	No	1.0
countysegregation	numeric	Index of dissimilarity where higher values indicate greater residential segregation between nonwhite and white county residents	--	None	No	1.0
countysuicide	numeric	Number of deaths due to suicide per 100,000 population	--	None	No	1.0
countyhousingprob	numeric	Households with at least one of four housing problems: overcrowding, high housing costs, lack of kitchen facilities, or lack of plumbing facilities	--	None	No	1.0

## Overdose Fatality Review Recommendation Monitoring

Section B—Recommendation Monitoring						
Variable name	Type	Description	Response options	Skip logic	Identifier?	Version
record_id	text	REDCap-generated unique case identifier	--	None	No	1.0
rec_text	text	Public/edited version of recommendation	--	None	No	1.0
rec_notes	text	Working draft/narrative of recommendation	--	None	No	1.0
rec_id_date	date	Date recommendation was identified/initiated	--	None	No	1.0
rec_cases	text	Cases that generated/related to recommendation	--	None	No	1.0
rec_data_type___1	binary	Data sources, Behavioral health record information	0, Unchecked 1, Checked	None	No	1.0
rec_data_type___2	binary	Data sources, Criminal justice record information	0, Unchecked 1, Checked	None	No	1.0

## Appendix A (State Codes)

For variables birth\_state, residence\_state, overdose\_state, death\_state, and community\_state, the variable value, when known, is the two-digit Federal Information Processing Standards (FIPS) code for the state or U.S. territory. Below are the codes associated with states and territories.

FIPS Code	State Name	Abbr
01	Alabama	AL
02	Alaska	AK
04	Arizona	AZ
05	Arkansas	AR
06	California	CA
08	Colorado	CO
09	Connecticut	CT
10	Delaware	DE
11	District of Columbia	DC
12	Florida	FL
13	Georgia	GA
15	Hawaii	HI
16	Idaho	ID
17	Illinois	IL
18	Indiana	IN
19	Iowa	IA
20	Kansas	KS
21	Kentucky	KY
22	Louisiana	LA

FIPS Code	State Name	Abbr
23	Maine	ME
24	Maryland	MD
25	Massachusetts	MA
26	Michigan	MI
27	Minnesota	MN
28	Mississippi	MS
29	Missouri	MO
30	Montana	MT
31	Nebraska	NE
32	Nevada	NV
33	New Hampshire	NH
34	New Jersey	NJ
35	New Mexico	NM
36	New York	NY
37	North Carolina	NC
38	North Dakota	ND
39	Ohio	OH
40	Oklahoma	OK
41	Oregon	OR
42	Pennsylvania	PA

FIPS Code	State Name	Abbr
44	Rhode Island	RI
45	South Carolina	SC
46	South Dakota	SD
47	Tennessee	TN
48	Texas	TX
49	Utah	UT
50	Vermont	VT
51	Virginia	VA
53	Washington	WA
54	West Virginia	WV
55	Wisconsin	WI
56	Wyoming	WY
60	American Samoa	AS
66	Guam	GU
69	Northern Mariana Islands	MP
72	Puerto Rico	PR
78	U.S. Virgin Islands	VI

## Appendix B (County Codes)

For variables birth\_county\_xx, residence\_county\_xx, overdose\_county\_xx, death\_county\_xx, and community\_county\_xx, where “xx” is the two-letter abbreviation of the selected state, the variable value is the five-digit Federal Information Processing Standards (FIPS) code for the county or equivalent for that given state. For example, for Alabama, the associated county of birth variable would be birth\_county\_al. Note that Connecticut, Missouri, Nevada, and Virginia have “independent cities” that are not associated with a county. These are collected as well. Listed below are the FIPS codes for each county or equivalent for each state.

<b>Alabama (al)</b>	01025 Clarke County	01051 Elmore County	01077 Lauderdale County
01001 Autauga County	01027 Clay County	01053 Escambia County	01079 Lawrence County
01003 Baldwin County	01029 Cleburne County	01055 Etowah County	01081 Lee County
01005 Barbour County	01031 Coffee County	01057 Fayette County	01083 Limestone County
01007 Bibb County	01033 Colbert County	01059 Franklin County	01085 Lowndes County
01009 Blount County	01035 Conecuh County	01061 Geneva County	01087 Macon County
01011 Bullock County	01037 Coosa County	01063 Greene County	01089 Madison County
01013 Butler County	01039 Covington County	01065 Hale County	01091 Marengo County
01015 Calhoun County	01041 Crenshaw County	01067 Henry County	01093 Marion County
